*Alligator  
River  
National  
Wildlife  
Refuge*

*This blue goose,  
designed by  
J. N. "Ding"  
Darling, has  
become a symbol  
of the  
National  
Wildlife  
Refuge  
System.*

**Note**  
*Not intended to be  
the blue goose or  
the Snow Goose,  
but named for its  
bright blue color as  
a logo.*

Red-cockaded  
Woodpecker

Northern Harrier

**Birds of Alligator River National  
Wildlife Refuge**

Alligator River National Wildlife Refuge provides a variety of habitat for over 250 species of birds. The diversity of refuge habitat includes high and low pocosin (pond pine bogs), fresh and brackish water marshes, hardwood swamps, Atlantic white cedar swamps, and managed farming areas. The Refuge is of importance as a major breeding area for many species of songbirds. Truly impressive are the breeding populations of Prairie Warblers, Prothonotary Warblers, and Common Yellowthroats. The Refuge is of special significance as the last major stronghold of the Southeastern Coastal Plain population of Black-throated Green Warblers. Observant birders will notice that several species of "common" songbirds are relatively scarce (completely absent in some cases) as breeders in this coastal location—species like Wood Thrush, Red-eyed Vireo, American Redstart, and Summer Tanager. This biologically fascinating area may still hold ornithological secrets—it was recently discovered that Black-billed Cuckoos over-summer (and presumably breed) in the Refuge some years, and that Northern Saw-whet Owls sometimes overwinter in numbers. The Refuge has several colonies of the endangered Red-cockaded Woodpeckers, although these are rather inaccessible.

This bird list covers birds found within the Refuge's 152,000 acres, as well as the 45,000+ acre Dare County Range found within the Refuge's borders and waters immediately adjacent. Although much of the Refuge can be difficult to access, especially during wet weather, accessible areas are an unexplored adventure for the enthusiastic birder. At any season, the Refuge can be an excellent complement to a birding excursion on

Nelson's  
Sharp-tailed  
Sparrow  
& Saltmarsh Sharp-  
tailed Sparrow

the nearby Outer Banks (Cape Hatteras National Seashore, Pea Island National Wildlife Refuge). During late fall and winter, the 5,100-acre farming area attracts an impressive variety of waterfowl and raptors, and several rarities—such as Swainson's Hawk and Ash-throated Flycatcher—have been found here. At any season, you might see Northern Bobwhites, and maybe a King Rail. Please pay attention to refuge regulations and signs marking closed areas.

### When and Where

In addition to walking trails, there are 15 miles of paddling trails which offer access to Refuge habitats. Creef Cut Wildlife Trail includes an observation platform which overlooks a moist soil management unit and a boardwalk over a freshwater marsh. Waterfowl (during the winter months), raptors, and woodpeckers are common at this location. Sandy Ridge Wildlife Trail offers access to Milltail Creek wetland areas and wanders through Atlantic white cedar stands, areas with wood duck boxes, and Prothonotary Warbler nesting areas. Swainson's Warblers have also been heard here.

Barred Owl

American Bittern

<b>Sp</b> - Spring	March-May
<b>S</b> - Summer	June-August
<b>F</b> - Fall	September-November
<b>W</b> - Winter	December-February

- C** Common (easily seen in suitable habitat)
- F** Fairly common (seen most of the time in suitable habitat)
- U** uncommon (usually present but not certain to be seen)
- O** occasional (seen only a few times during a season)
- R** rare (seen at intervals of 2 to 5 years)
- A** Accidental (extremely rare; birds that are completely outside of normal range)
- \* breeds or has bred on the Refuge
