Lower Suwannee

*National Wildlife
Refuge*

Located along the southern edge of the Big Bend Region of Florida's west coast, Lower Suwannee National Wildlife Refuge encompasses 52,935 acres of land in Dixie and Levy Counties. The historic Suwannee River, made famous by Stephen Foster, bisects the refuge.

This blue goose, designed by J.N. "Ding" Darling, has become the symbol of the National Wildlife Refuge System.

Introduction

Lower Suwannee National Wildlife Refuge was established on April 10, 1979, for the purpose of protecting, maintaining, and enhancing a beautiful and rare natural ecosystem. Purchase of the lands was made possible through the cooperative efforts of the U.S. Fish and Wildlife Service, The Nature Conservancy, and Florida's Suwannee River Water Management District.

Along the river and its tributary creeks, the habitat consists of majestic cypress trees and floodplain hardwood forests; scrub oak communities and pine plantations are found on the upland sites.

USFWS/Larry Woodward

From the mouth of the Suwannee River, the refuge fronts 26 miles of the Gulf of Mexico where the habitat changes to scenic tidal marshes dotted with coastal islands. Each of these diverse vegetative communities

contributes to making Lower Suwannee Refuge one of the largest undeveloped river delta-estuarine systems in the United States.

The overall goal of Lower Suwannee National Wildlife Refuge is to provide conditions desirable to wildlife through scientific management. Specific objectives developed for the area include providing habitat and protection for endangered and threatened species as well as migrating birds and native wildlife. The refuge also provides opportunities for environmental education and wildlife oriented recreation.

Habitat and Wildlife

A constant influx of nutrients from the river system coupled with numerous offshore islands and tidal creeks create excellent wildlife habitat. Marine mammals such as bottlenose dolphin and the endangered West Indian Manatee, along with several species of marine turtles, utilize the coastal waters of the Suwannee

Sound. Natural salt marshes and tidal flats attract thousands of shorebirds and diving ducks while acting as a valuable nursery area for fish, shrimp and shellfish. Freshwater fish including largemouth bass, Suwannee bass, bluegill, redear sunfish and channel catfish

are found in the Suwannee River and its creeks.

Floodplain wetlands such as bottomland hardwood forests, wooded swamps and freshwater marsh support nesting wood ducks, black bear, otter, alligator, wading birds, raccoons and several species of bats. Mixed hardwood pine forests and uplands offer cover to turkey and white-tailed deer.

In addition to these animals, other species (including several that are classified as endangered or threatened) utilize various habitat types present on Lower Suwannee Refuge.

Over 250 species of birds have been identified within the refuge. Osprey, swallow-tailed kite and bald eagles are among the ninety species that nest in the area.

Major habitat management practices since 2002 have emphasized construction of habitats for several species of bats (Brazilian free-tail, Rafinesque's big-eared

and southeastern Myotis) and Prothonotary warblers.

By necessity, over the years, much of the research conducted on the Refuge has been accomplished through partnerships that encourage cutting-edge techniques by university faculty and their graduate students, as well as cooperating agencies including the U.S. Geological Survey, Florida Cooperative Fish and Wildlife Research Unit, and the Florida Fish and Wildlife Conservation Commission.

A continuing archaeological study is being conducted across our 30 coastal miles. Breeding bird flight-line surveys continue each spring nesting period and Bat Conservation International audits our bat houses biannually. Thanks to the Florida Natural Areas Inventory, the refuge has been able to conduct a comprehensive survey of rare plants and document historic habitats.

In addition, several cooperators are working to understand the effects on-going climate change and sea level rise will have on refuge habitats and wildlife species.

Managing the Forest

Refuge employees strive to provide high quality habitat conditions for a variety of native wildlife. When the refuge was established, more than 6,000 acres of uplands had been

commercially managed for timber production. Projects designed to restore these areas to more natural conditions are underway. Hundreds of acres of slash pines have been selectively thinned – and in some cases clear cut - to allow reforestation to more native longleaf/wiregrass and mixed hardwood communities.

Much of the state of Florida contains ecosystems that have adapted with fire, typically burning naturally every three to ten years. Pine flatwoods and scrub are good examples of communities that need fire to sustain high quality habitat. Prescribed fire (controlled burning) is used on refuge uplands and wetlands to mimic the natural fire regime. This improves habitat and food availability for many species of wildlife including the gopher tortoise, eastern indigo snake, and marsh and wading birds.

Recreational Opportunities

Lower Suwannee Refuge provides opportunities to enjoy the great outdoors through wildlife-oriented recreation including wildlife observation and photography, fishing, hunting, environmental education, interpretive programs, and paddling. There is no admission fee.

Hiking trails, observation platforms, fishing piers, boardwalks and several launch sites for small boats provide access to many areas of the refuge that are off the beaten path.

Enjoy the marshes as well as estuarine waters of the Gulf of Mexico. Paddle through spectacular scenery with the aid of Lower Suwannee NWR paddling maps; go to <http://www.friendsofrefuges.org/> to download a copy. All 12 paddles offer award-winning photo opportunities and priceless encounters with nature.

During the spring and summer months, American alligators are commonly sighted throughout all refuge wetland areas. Osprey, swallow-tailed kite, and bald eagle activity peaks during late spring. White-tailed deer are more readily observed during the fall and winter with the best time for viewing being at dusk along road right-of-ways.

USFWS/Kathy Whaley

How to Enjoy Your Visit

The refuge is open year-round for wildlife observation, hiking and photography. There are 40 miles of improved roads (primary) scattered through the refuge that are open to motorized vehicles, which provide the visitor a glimpse of the various forest and wetland habitats within the refuge. Hiking and bicycling are allowed on all refuge roads. An additional 50 miles of unimproved roads (secondary) are available for hiking and bicycling only.

USFWS/Larry Woodward

Several walking trails are available on the refuge. The historic Suwannee River and its hardwood swamps can be viewed along the 0.6-mile River Trail and .25 mile Bottomland Boardwalk located just north of the refuge headquarters.

USFWS/Larry Woodward

The 2.8 mile Tram Ridge Trail is adjacent to the River Trail. It winds through a variety of habitats loaded with migratory songbirds and wildflowers in spring.

A short drive to the end of County Road 326 reveals Shell Mound (0.3 mile loop) and Dennis Creek (1 mile loop) Trails. Take the wooden bridge across a salt barren, past wading birds at the pond to the observation deck. Shell Mound Trail explores a 6,000 year old archaeological site reaching 28 feet in height, where a spectacular view of the coastal estuary and Gulf awaits you.

USFWS/Henry Sansing

A handicapped accessible fishing and observation pier is also available at Shell Mound.

The Salt Creek observation trail (.1 mile) and fishing access provide a breathtaking view of the salt marsh and coastal pine islands.

This trail is located off of CR 349 about one mile from the town of Suwannee. Take the Dixie Mainline off Highway 349 to access this and many more picturesque sites like tidal creeks, lily ponds and swamps.

Note: Biting insects are particularly numerous along these trails during the summer months. Use of an insect repellent is advised.

Coastal waters, tidal creeks, interior ponds and the Suwannee River are open year-round to fishing. Public boat ramps providing access to the Suwannee River are located at nearby Fowler's Bluff and the town of Suwannee in Dixie County. Access to coastal waters is available at Cedar Key, Shell Mound, Shired Island and the town of Suwannee.

USFWS

Hunting of small game (squirrel, raccoon) big game (turkey, deer and hog), and waterfowl is permitted during designated seasons. A Lower Suwannee NWR permit (code 7800) is required for all hunting activities for anyone 16 years of age or older. You can purchase the hunting permit through any vendor that sells hunting licenses.
