

YELLOWSTONE

NATIONAL PARK

Wyoming • Montana • Idaho

FOR YOUR SAFETY

While in geyser or hot springs areas, *Stay on Constructed Walks and Keep Your Children on Them.* A fall into a boiling pool is fatal; in many places, ground crust that looks safe and solid is thin—dangerous to walk on.

Bears, Deer, and Other Large Animals Are Potentially Very Dangerous. Observe Them From a Distance; Do Not Feed Them.

INTRODUCTION

This is *YOUR* Yellowstone—the oldest national park in the United States (1872), the largest, and the one in which the greatest number of American families spend the most vacation time.

The National Park System, of which this park is a unit, is dedicated to conserving the scenic, scientific, and historic heritage of the United States for the benefit and enjoyment of its people.

Its 3,472 square miles, set apart in the northwest corner of Wyoming, and extending into Montana and Idaho, contain such a variety of natural phenomena that early explorers called it "wonderland."

It is not difficult to see why. Within its several geyser basins, Yellowstone harbors more than 10,000 thermal features. Some two hundred geysers, myriads of hot springs and bubbling mud volcanoes, and brilliant pools and terraces make it the most extensive and spectacular thermal area in the world.

But Yellowstone is not alone the mighty surge of Old Faithful's periodic eruptions, the merry *plop, plop* of the paint pots nor the angry convolutions of the Black Dragons Caldron.

It is also the Grand Canyon of the Yellowstone River, 24 miles of twisting, sheer rock walls 1,200 feet deep, tinted with red and every shade of yellow visible to man—from the palest lemon to the most brilliant orange—given the decomposed rhyolite by various oxides of iron.

It is Yellowstone Lake, whose blue waters are fed by snow from forested mountains that surround intimately most of its 100-mile shoreline. The largest mountain lake in North America at such high elevation (7,731 ft.), it is renowned equally for its beauty and for the fighting blackspotted or "cutthroat" trout that have made it one of the most famous fishing areas in the country.

Finally, Yellowstone is the best loved park of many Americans because of the number and variety of the wild animals—bear, moose, deer, wapiti (elk), pronghorn (antelope), coyote, bison (buffalo), and others—that roam mountainside and meadow with monumental unconcern, and live in one of the greatest wildlife sanctuaries in the world.

THE BLACK BEAR

This may be the time to say an additional word about the bear, who is at once the visitor's greatest delight and the ranger's biggest headache.

American black bears (not only black, but also brown, cinnamon red, and platinum blonde) will be found along all the roads—often with a cub or two—begging most piteously for something to eat. *For your sake and theirs, stay away from them; park regulations forbid feeding, teasing, or molesting them in any way.* By feeding them, you are courting danger for yourself and those with you and are doing the bears a disfavor. They are well-fed, and they do better on the fare which nature has provided than on crumbs from your table.

Furthermore, they are greedy, and may return your generosity with a swat from a mighty paw when the cookies have run out.

As many as 115 Yellowstone visitors received medical treatment in a single year for wounds resulting from feeding and too close familiarity with bruin.

Even if you don't get a scratch or a bite or a bad fright, you may end up with a fine from the U. S. Commissioner at park headquarters, for violation of park regulations. So—set your camera, take your pictures *from inside the automobile*, and go on your way. Bear-jams tie up traffic and cause accidents.

AROUND THE GRAND LOOP

Whatever the way or the route by which you have entered Yellowstone National Park, you will find it profitable, as soon as you can do so after arrival, to read this publication through, for it has been prepared to answer most of the questions likely to arise during your visit.

Overnight accommodations, eating places, campgrounds, stores, souvenir shops, and automobile services are concentrated at relatively few points in the park, thus leaving all but a small percentage of the area in its natural, primeval condition. These places are also the centers from which various interpretive activities—in which you are invited to participate—are carried on.

Starting with Mammoth Hot Springs, which is park headquarters, these major points of interest are listed here in the order in which you will encounter them in going counterclockwise around the Grand Loop.

Mammoth Hot Springs (park headquarters). The graceful terraces at Mammoth, formed by limestone (travertine) from the hot springs, are unlike the silica hot springs deposits in the park. The Mammoth Terraces rise in dizzy heights; some are brimming over with pools of water that reflect the blue of the sky at noon and the brilliant sunsets later in the day, but others are crumbly and ghostly, and of pale hues.

Guided terrace walks are scheduled hourly from 9 a. m. to 3 p. m.; the auto caravan to the more distant terraces starts at 2 p. m.; and the 3-hour nature walk starts at 8 a. m. These are supplemented by the Clematis Gulch self-guiding trail.

A wildlife search by auto caravan leaves Mammoth Museum each evening at 6:30. Seldom will you return from a trip without having seen wapiti, deer, moose, bear, or pronghorn.

Norris Geyser Basin. To many people this is the most exciting geyser basin in the park. Some of its thermal features are set within a great hollowed-out bowl called Porcelain Basin, within which roaring steam vents provide eerie sound effects as you walk through it. Geysers and bubbling springs add to the activity.

The museum is one not to be missed, with its unusual dioramas. Conducted walks cover the main basin's loop trail; the Green Dragon Spring self-guiding trail will take you over the entire southern basin in less than 2 miles.

Stay on the wooden walks constructed in geyser basins; in many places the crust is extremely thin and walking on it dangerous. Take care not to slip or step into hot pools. Children must be closely attended in all hot-water areas. Leave your pets in your car.

Madison Junction. The museum here tells the story of the founding of the park in its exhibits and in the view from its picture window, which looks out on the very campsite at the junction of the Firehole and Gibbon Rivers where the Yellowstone Park idea was first effectively expressed.

Old Faithful and the Geyser Basins. Between Madison Junction and the Upper Geyser Basin (Old Faithful) is Lower

Geyser Basin containing many geysers, springs, and paint pots, working away in cheerful harmony. Geysers worthy of patient vigil are Great Fountain and White Dome; in contrast, Steady Geyser never ceases to play, and Little Hopeful is almost constant. Fountain is one of the most glamorous of the paint pots, and Gentian is one of the loveliest of the pools, the color of Yellowstone's official flower—the Rocky Mountain fringed gentian.

Midway Geyser Basin is next with Grand Prismatic Spring, the largest in the basin, and Excelsior Geyser—once the most powerful in the park. It last played in 1888, when it shot 300 feet into the air; it still gives forth some 1½ billion gallons of scalding hot water annually. The steam from its crater fills the whole basin at sunset when the air is cool, and it rises like a white giant against the pink sky as the mountains slowly turn from blue to black.

Biscuit Basin, 2 miles from Old Faithful, includes beautiful Sapphire Pool which erupts at frequent intervals, Jewel Geyser, and other beautiful springs and pools.

Old Faithful Geyser

Minerva Terraces,
Mammoth Hot Springs

Old Faithful Village is a bustling community whose activities are timed to the performances of the world's most renowned geyser, that has become the symbol of Yellowstone Park.

Old Faithful does not play every hour on the hour—you cannot set your watch by it! Eruption intervals do average about 65 minutes but they vary between 30 and 90 minutes. Old Faithful's reputation for dependability derives from the fact that it has never missed an eruption during the more than 80 years it has been observed, and that its variations follow a pattern that makes it reasonably predictable.

After dark, one eruption of Old Faithful is illuminated; during the long hours of the night the geyser keeps its vigil while the village sleeps.

No one of the three geyser basins—Upper, Midway, and Lower—should be missed, for each has its own claim to fame and is worth exploring.

Your tour is not complete without a preliminary visit to the Old Faithful museum, where the "why" and "how" of geysers is explained, the "who," "what," and "where" noted, and the

"when" predicted. The most spectacular among the "predictable" group include: Old Faithful, Castle, Daisy, Grotto, Grotto Fountain, Plume, Riverside, Morning, Great Fountain, and Lone Star.

Do not miss the Geyser Hill conducted walks that follow each eruption of Old Faithful, nor the trip to Black Sand Basin (2 miles), where some of the most incredibly formed and beautifully colored pools are found. A 3-hour nature walk from Old Faithful to Observation Point climaxes in a view of the Upper Basin (with Old Faithful just opposite) from a height of some 300 feet. There are two evening naturalist programs at Old Faithful—one indoors, one outside.

West Thumb. On your way from the Upper Geyser Basin to West Thumb, at the end of a long arm of Yellowstone Lake, you will cross the Continental Divide twice. The Upper Geyser Basin lies in the Missouri-Mississippi drainage, as does West Thumb; but between them, the road enters and leaves a part of the headwaters of the Lewis-Snake-Columbia River drainage. Isa Lake, athwart the Continental Divide, empties into both drainages. The golden water lilies, which cover its surface from early summer until frost, are highly valued as food by many small animals.

At West Thumb the gaudy paint pots, bubbling and steaming, operate against the backdrop of sparkling Yellowstone Lake. There are many deep azure and emerald pools, and the Fishing Cone, a hot-spring mound surrounded by lake waters, is a geological oddity on the lake shore.

Brief geyser walks are conducted by a naturalist on day-long duty in the area; there is also a self-guiding geyser walk and an evening campfire program.

Lake-Fishing Bridge. From Fishing Bridge at the outlet of Yellowstone Lake, where anglers stand elbow to elbow from dawn to dusk, one may follow the road eastward 10 miles to Lake Butte for a panoramic view of the lake, or head toward Lake Hotel, and the dock where fishing and speed boats can be rented. Boats can also be rented at Fishing Bridge.

Because the Lake and Fishing Bridge areas are only 2 miles apart, you can participate in the naturalist programs of both. The nature walk from Lake Lodge takes you up the Old Elephant Back trail to another fine view of the lake; on the Fishing Bridge walk you explore the lake shore and swamp area, where many varieties of birds can be seen. You will also enjoy interesting bird and other exhibits in the Fishing Bridge Museum.

Canyon. While passing through the tranquil Hayden Valley en route from Fishing Bridge to Canyon, you reach the Mud Volcano area. A quarter of a mile away by trail is the Black Dragons Caldron, newest (1948) of the mud geysers, and the most awesome.

The most exciting way to see and hear the Lower Falls of the Yellowstone River, which are twice as high as Niagara Falls, is via Uncle Toms Trail—half path, half stairway—to a point 308 feet below the brink of the falls. If you go down in the morning hours when the sun is shining, you will see a rainbow in the spray. The hike is quite strenuous at this high elevation (over 7,700 feet).

The Upper Falls (viewed without climbing) are almost as spectacular in their mighty thundering roar, though they drop only 109 feet.

The canyon itself is gloriously beautiful any time of day, and you can see it and the Lower Falls from many fine view points. Artist, Inspiration, Grandview, and Lookout are particularly strategic for taking pictures.

Guided walks give you a choice of North or South Rim trips (3 hours). The Red Rock Trail is self-guiding.

Tower Fall. From a large parking area, the path leads to the Tower Fall Observation Platform where the 132-foot-high fall can best be seen. It was so named by the Expedition of 1870 for the pinnacles surrounding its brink.

On the road toward Mammoth Hot Springs you will pass Roosevelt Lodge, near where President Theodore Roosevelt camped. A daily morning nature walk and the Lost Falls self-guiding trail start from the lodge and evening programs are held in the lobby.

WILDERNESS AREAS

Only a small percentage of the park is "developed" (roads, villages, campgrounds). Thus, from almost any point along

the busy Grand Loop Road, you may walk 300 yards and feel completely detached from anything manmade. There, in the quiet of forest or meadow, the buzzing of a fly or a mosquito, or the song of a bird is a dominating sound.

Yellowstone provides more than a thousand miles of well-marked back-country trails. The Howard Eaton Trail, named after the famous horseman and guide, parallels roughly the Grand Loop Road for some 150 miles. It is a horseback trail, but it may be hiked as well.

Especially recommended are the trails to Shoshone Lake (one is 3 miles long, the other 7) in the Old Faithful area; the hike up Mount Washburn from Dunraven Pass; and the trail to Bunsen Peak, 2 miles from the highway near Golden Gate, above Mammoth Hot Springs.

If you are driving, you can still get off the beaten path. Ask about the old Tower Fall road, the Lower Mesa road from Norris, and the Fountain Freight road. This last is another pleasant detour en route from Madison Junction to Old Faithful, and one which gives a different and dramatic view of the Midway Geyser Basin and Grand Prismatic Spring.

If you are camping, why not try one of the smaller and more remote campgrounds? (See pages 24 and 25 for camping information.)

When hiking, never leave the trail to take a shortcut. Never hike alone. Before starting an extended or overnight hike, register and obtain a FIRE PERMIT at the nearest ranger station.

PARK RANGERS

Park rangers are responsible for enforcement of park rules and regulations, fire detection and suppression, operation of entrance stations, and general supervision of activities in the several districts into which the park is divided.

They also handle lost and found property, and receive suggestions and complaints from visitors.

If you are in any sort of difficulty, or need information, SEE A PARK RANGER. He is here to help you. Remember however, that he is also a park police officer, commanding the same respect you give such an officer at home. He is authorized to issue summons for the violator of a park regulation to appear before the U. S. Commissioner at park headquarters. Persons who commit more serious offenses may be tried in the U. S. District Court at Cheyenne, Wyo. (See page 26 for park rules and regulations.)

PARK NATURALISTS

Park naturalists, who are also in uniform, are the park's "interpretive" force. They are here to help you understand what you see in the park, and they are responsible for all interpretive services, which are free of charge. These include:

Museums. The museum at Mammoth Hot Springs is the year-round headquarters of the chief park naturalist and his

Park ranger naturalist with party on Uncle Tom's Trail to Lower Falls

staff. It is biological, geological, and historical in content, and will give you a background for the following branch museums, each of which has a theme:

- Old Faithful (geology of the large geysers, biology).
- Madison Junction (history).
- Norris (geology of thermal areas).
- Fishing Bridge (biology and geology of the Lake area).

Campfire programs. Informal programs are given each evening by park naturalists at Mammoth Hot Springs, Madison Junction, Old Faithful, West Thumb, Lake, Fishing Bridge, Canyon, and Roosevelt Lodge. These usually include the presentation of slides or motion pictures dealing with the history or natural history of the park. Just a few of the subjects (changed each evening) are these: Park birds, geology, flowers, fishing, Indians, mountains, animals, photography in the park, and Yellowstone in winter. Daily subjects are posted on bulletin boards located at important interest centers.

Guided walks. In all the thermal areas, along specially constructed wooden walks, and at the Grand Canyon, naturalists lead regularly scheduled tours of the neighborhood. Nature walks are conducted along forest trails morning or afternoon in many parts of the park.

Self-guiding trails. These are marked with maps and numerous trail signs.

WILDLIFE OF THE PARK

Mammals. The American black bear will be the first Yellowstone animal you will see, in all probability. However, you are not likely to see a grizzly, the most feared and respected of the park's wild animals—and rightly so. His fur is frosty brown and he has a hump on his neck; he is distinctly larger than the black bear, when full grown. If you should meet him in the woods, give him a wide berth.

If you are truly interested in seeing the park wildlife, rise with the sun and ride or hike in the early morning through the forests and meadows. By 8 or 9 a. m. most of the animals will have gone into seclusion, not to be seen again until evening when they again come out into the open areas to feed. For photography, the morning hours are best.

What will you see?

The mule deer, moose, wapiti, pronghorn, bighorn (rarely), bison, and coyote. These—in addition to the bears—are the larger mammals common to Yellowstone.

These are the places they are most likely to be seen in numbers:

Deer. Mammoth Hot Springs area, below the terraces and at Indian Creek; near Canyon Hotel and Chittenden Bridge; in three directions from West Thumb.

Wapiti. Below Madison Junction on the West Yellowstone road; in the lower Norris Geyser Basin; in the Roaring Mountain area between Mammoth and Norris.

Moose. In Willow Park between Mammoth and Norris; at Lewis River below the Lewis River falls; in Pelican Creek near Fishing Bridge; Hayden Valley; Dunraven Pass; and Soda Butte Creek near the Northeast Entrance.

Bison. In the Lower Geyser Basin; near Madison Junction; Hayden and Lamar Valleys; and near Mary Bay on the East Entrance road.

Coyote. Everywhere; he is becoming as bold as the bear. Particularly, however, in the Lamar Valley; in Hayden Valley and near Mammoth.

Bighorn. Near the summit of Mount Washburn.

Pronghorn. Near Gardiner and the North Entrance; on the Blacktail Deer Plateau between Mammoth and Tower Junction; in Lamar Valley.

It is reckless and dangerous to approach any wild animal closely, even though it appears tame. Any of the larger animals may turn impulsively and inflict serious injury. Do not

Hour-old bison calf and its mother

feed, tease, frighten, or molest them in any way, particularly if they are accompanied by young; such acts are violations of park regulations.

Among the smaller mammals seen along the roadside are the marmot (groundhog), golden-mantled ground squirrel, chipmunk, and Uinta ground squirrel, or picket-pin. This last-named little fellow gets his nickname because he stands as straight as the wooden pins used to tether horses. You see him in open places—not in the forests.

Birds. For birdwatching, as well as for spotting mammals, binoculars will be found useful. Yellowstone's bird population is fascinating in its variety; it includes some 200 species.

Our Nation's symbol, the bald eagle, will be seen—but not often—somewhere near the Madison, Firehole, or Yellowstone Rivers, or Lake Yellowstone. His white tail and head identify him. The osprey, considerably smaller, has white on the head and underbody. He usually nests on rock pinnacles; the eagle in the treetops. Osprey nests are visible from some of the canyon overlooks.

Among the water birds, look for the pelicans at Lake, Fishing Bridge, and Hayden Valley, floating like a white ship under sail. Watch also for the California gull, the mallard duck, and the Canada goose. The rare trumpeter swan, which at one time was almost extinct, is difficult to see, for it nests in secluded lakes and ponds. There are about 60 resident in the park.

The most brilliant of the smaller birds is the western tanager; watch also for the violet-green swallow, flashing color as it glides along canyon walls, the western and Rocky Mountain bluebirds, the Canadian jay, and the water ouzel or dipper, the clown of the bird world, who performs along fast streams near waterfalls and rapids.

TREES AND FLOWERS

Ninety percent of Yellowstone is forested. The lodgepole pine predominates (about 80 percent); other evergreens are limber pine, whitebark pine, Englemann spruce, Alpine fir and Douglas-fir, Rocky Mountain juniper, and mountain common juniper.

You will see the quaking aspen in many places (listen to its leaves in the wind); at lower elevations, the narrow-leaf cottonwood and, along the streams, the mountain alder and willow.

Walk out on the sweet-smelling valley floor and note the sagebrush, rabbitbrush, and shrubby cinquefoil in rich profusion.

There, too, you will find the flamboyant Indian paintbrush, and lupine—a heavenly blue; in the cooler places, the delicate columbine and harebell, and, in damp meadows all over the park, the Rocky Mountain fringed gentian, Yellowstone's own flower.

Study the flower exhibits in the museums (there are fresh displays daily) so that you can identify them as you pass them

Golden Gate, near Mammoth Hot Springs.

on the roadside or trail. And, particularly if your camera has a telephoto or wide-angle lens, you will be able to get delightful wildflower photographs.

GEOLOGY OF THE YELLOWSTONE REGION

Many millions of years ago this area which is now a mountain park (average elevation 7,500 feet) was an inland sea, with no land in sight. Then, during a long period of mighty internal disturbance, the earth pushed its crust slowly upwards, and the water receded. What is now the park began to take form as a huge basin surrounded by peaks.

A series of violent volcanic eruptions brought about the next great geological change. The mountains exploded to pour out onto the surrounding country great quantities of

volcanic debris; this formed the rocks which make up the Absaroka Range. The earth's crust fractured, great faults developed, and the Gallatin Range came into being. Successive lava flows accumulated in the lowlands, which are today the lodgepole-covered plateaus.

One of the results of volcanic activity is 10,317-foot Mount Washburn, whose lookout tower gives a breathless and revealing view of the whole park. Its summit is an easy 3.6-mile hike from the highway.

The fires of the volcanoes were followed by bitter cold with much snow and ice. Glaciers moved out of the mountains reshaping many of the stream-cut valleys and canyons to the form we see today. The glaciers modified the hot-spring basins, remnants of the ancient volcanic action.

A large percentage of the rock we see in the park is a light-colored lava called rhyolite. One of the most interesting of the other rock formations is basalt, a dark lava, which looks as though it had been pressed into precise columns by giant hands along the canyon walls of the Yellowstone River near Tower Fall. (Roadside exhibits and displays in visitor centers explain the geology of the park at important points. You will find it worthwhile to study these.)

MAN AND YELLOWSTONE

The first people to inhabit Yellowstone were, of course, the Indians. Of these the Sheepeaters (who lived in the Gardiner River canyon area near Mammoth Hot Springs) were the only year-round residents. Neighboring tribes, however, wandered in and out to hunt and fish. Burials unearthed by accident in 1941 and 1956 show that some 800 years ago there were Indian residents of what is now the busy Fishing Bridge campground.

John Colter is believed to have been the first white man to set foot inside what is now the park. In 1807 he took leave of the Lewis and Clark expedition to do some exploring on his own, for which he was greatly rewarded. All alone, it is recorded, he followed the western shoreline of Yellowstone Lake by way of the hot springs at the water's edge, saw the Grand Canyon, crossed Mount Washburn, and pressed north to Tower Fall, where he forded the Yellowstone River. He gave an account of his strange travels when he returned to St. Louis 3 years later.

Among the fur traders and gold seekers who followed Colter were Jim Bridger and Walter DeLacy whose weird tales, some true, some greatly exaggerated, appeared in many newspapers before 1869. Thus the American people became acquainted with the fabulous region the Indians called "Rock Yellow River," and were in a mood to appreciate the significance of the gift they were about to receive.

The Expedition of 1870. Although the notion of a national park "to be set apart" here for the use and enjoyment of the people was not a new one, it actually saw birth as the result of an expedition of 19 men in 1870.

Its leaders were Gen. Henry D. Washburn, surveyor-general of Montana; Hon. Nathaniel P. Langford, who later was to

Reenactment of the 1870 campfire in Yellowstone at which the national park idea was born.

Self-portrait of William H. Jackson who was the first person to photograph the wonders of Yellowstone.

serve as the first superintendent of Yellowstone Park; and Lt. Gustavus C. Doane of the U. S. Army, who, with a little group of soldiers provided protection for the party. The expedition has become known familiarly as the Washburn-Langford-Doane Expedition, and the memory of these three has been perpetuated further by the naming of mountains in their honor.

The party, in less than 4 weeks' travel through the park, discovered and reported on most of the wonders John Colter may have seen more than 60 years earlier. Their only serious mishap occurred when one of their members, Truman C. Everts, became separated from the group and spent "37 days of peril" in the wilderness. He was found and rejoined his companions in Montana long after they had left the park. He, too, has a mountain named for him.

During their sojourn in the area and after having given up their search for Everts, the group stumbled upon the Upper Geyser Basin and stopped for a day to marvel at and name Old Faithful (the first geyser in the park to receive a name) and several other geysers.

Then, despondent over the loss of their companion, they pressed toward home. Near the end of their journey, they camped where the Firehole and Gibbon Rivers come together, at what is now Madison Junction, under the shadow of National Park Mountain.

Sitting around the fire on the night of September 19, they discussed possibilities of exploiting Yellowstone. It was Cornelius Hedges, a highly esteemed Montana judge, who interrupted their talk of speculation and personal profit with the suggestion that the region should become a national park. His proposal was received with surprising enthusiasm, and it was unanimously presented to the public by the group on arrival in Helena, Mont., a few days later.

A scientific and military expedition in 1871, under the direction of Dr. Ferdinand V. Hayden, and with William H. Jackson along to photograph its wonders, confirmed the findings of the year before. Thereupon a bill was introduced in Congress proposing the creation of the park. It was passed overwhelmingly early in 1872. On March 1, President Ulysses S. Grant signed the measure, and this wonderland was given into the keeping of the American people for all time.

Milestones. Five civilian superintendents saw the park through its important beginnings. In 1877, Nez Perce Indians, led by Chief Joseph, passed through Yellowstone during a retreat after they were routed in a series of continuing battles through the summer, in which a total of 300 lives were lost.

In 1894 a law was passed (Lacey Act) "to protect the birds and animals in Yellowstone National Park, and to punish crimes in said park." Administration of the park was turned over to the U. S. Army. Concessioners who still serve the park (Haynes, Inc., the Yellowstone Park Company, and the Hamilton Stores, Inc.) established means of caring for park visitors, whose numbers increased from 5,438 in 1895, the first year records were kept, to 1,457,782 in 1956.

On August 25, 1916, President Woodrow Wilson signed the act of Congress creating the National Park Service as a bureau

Lower Falls of the Yellowstone River

of the Department of the Interior, and very shortly thereafter civilian superintendents were again appointed, replacing the military.

Under the park superintendent, a staff of permanent and seasonal uniformed personnel provide service 7 days a week to protect the park and the visitor, and to interpret and explain its natural features.

PHOTOGRAPHY IN THE PARK

Yellowstone cries to be photographed in color—not only its high color sights, but also the pastel tones of the thermal springs, and the subtle skies of sunrise and some of its sunsets. You will find an exposure meter useful, because the geyser basins and the mountaintops have a quality of light that is difficult to measure with the eye.

A sky filter is necessary for accurate color rendering, and a yellow filter will give your black and white shots more interest. Try it for geysers, hot springs, and clouds.

The Haynes Photo Shops throughout the park can supply most of your photographic necessities, but they do *no processing*. Prepare, therefore, to pack your exposed film carefully away from heat and dust until you get it home, or mail it out to be processed. You will find a helpful booklet on "Photographing Yellowstone" in the picture shops, and a staff that is ready to help you solve any picture-taking problems.

RECREATIONAL OPPORTUNITIES

You will find no golf courses or tennis courts in Yellowstone; but instead, many forms of recreation that are somehow a part of it—hiking and riding, fishing and boating.

Riding. Horses (gentle ones for the children are included in every string) can be rented at Mammoth Hot Springs, Canyon, and Old Faithful. There are a number of scheduled trips; none may be made without a guide. You can, however, make up your own guided party and spend a day or several days exploring some of the thousand miles of horseback trails through arrangements with dude ranchers or licensed guides in the vicinity of the park.

Boating. Boats longer than 32 feet are not allowed in the park, nor are sailboats. No boats are allowed on the streams, except at Fishing Bridge and the Lewis Lake channel, but Lakes Yellowstone, Lewis, and Shoshone offer fine boating. Craft under 16 feet long are obliged, for safety, to stay within one-quarter of a mile from shore.

The 7-mile trip by boat from Lewis Lake campground to Shoshone Lake is well worth the effort, if you have your own boat. The last 4 miles follow the channel between the 2 lakes; because of swift waters during the last miles, it is necessary to wade upstream and pull the boat (the shallow water practically prohibits use of inboard motorboats). There are 7 campsites at Shoshone. There are no boats to rent at either Lewis or Shoshone Lakes.

Fishing. Yellowstone is one of the few parks in which *no fishing license is required*. It also offers perhaps the greatest variety of fishing in any area of this size in the United States—from a boat, on the lake, wading in a turbulent stream, or casting quietly from the bank, or from Fishing Bridge. Before you start to fish, acquaint yourself with the fishing regulations, and observe them carefully.

PARK SEASONS

The main season at Yellowstone is from about June 20 to September 10, when all hotels, cottages, and lodges are open and the railroads deliver passengers to the park entrances. For about a month before, and a month after these dates, when roads are clear of snow and motorists can visit the park interior, limited accommodations are available. (NOTE: Autumn is considered by many to be Yellowstone's most beautiful season.) Campgrounds and some stores and service stations are open. In winter, accommodations are available only outside the park.

WINTER ROAD CONDITIONS: Gardiner to Mammoth Hot Springs, open all winter; from Mammoth across the northern part of the park to Northeast Entrance and Cooke City, Mont., open all winter; West Entrance, closed approximately November 1 to May 1; East and South Entrances, closed approximately October 15 to May 25; Northeast Entrance, closed approximately October 15 to June 10. *All motorists visiting the park during winter, early spring, or late autumn should carry tire chains.*

PREPARING FOR YOUR VISIT

Books. Haynes Inc., has for many years produced the official park handbook, *Haynes Guide*. It can be bought at Haynes Photo Shops throughout the park or at park headquarters for \$1, or from Haynes Inc., 801 North Wallace Ave., Bozeman, Mont., for \$1.20, including postage.

Meanwhile, read one of these general books for added enjoyment and understanding of the park (probably available at your local library): *Yellowstone National Park* (Hiram M. Chittenden); *The Story of Man in Yellowstone* (Merrill D. Beal); or write to the Yellowstone Library & Museum Association, Yellowstone Park, Wyo., for a list of special texts on the park's plants and animals, geology and geysers.

What to Bring. Camera and binoculars; heavy, rubber-sole shoes for rocks and trails; hiking and riding boots; medium weight clothing for daytime wear; coats and sweaters for evening; raincoats for inclement weather.

HOW TO REACH THE PARK

By Automobile. Yellowstone can be reached from several transcontinental highways. Automobile associations, touring services, travel bureaus, chambers of commerce and leading gasoline stations furnish road information and maps. Inquiry should be made concerning road conditions and snow in high mountain passes in June and in September and October.

Yellowstone is entered by road at 5 points:
NORTH: At Gardiner, Mont. (56 miles from Livingston, Mont.).

NORTHEAST: Via Cooke City, Mont. (4 miles); 69 miles from Red Lodge, Mont.

EAST: Via Cody, Wyo. (53 miles).
SOUTH: From Jackson, Wyo. (56 miles), via Grand Teton National Park; 22 miles from Moran, Wyo.

WEST: At West Yellowstone, Mont. (Ashton, Idaho, 55 miles; Bozeman, Mont., 92 miles; Ennis, Mont., 71 miles).

Inside the park, there is a road system of approximately 300 miles. Some 98 miles are entrance roads, 60 miles are side-roads, and 142 miles make up the Grand Loop Road.

It is possible to drive around the loop in a day's time and glance at the park's major attractions. But the pity is, if you visit the park so briefly, you never will know how much you have missed.

Yellowstone is an experience to be felt as well as a place to be seen.

By Rail. Park buses meet trains or buses of the Northern Pacific Railway at Gardiner or Silver Gate, Mont.; of the Chicago, Burlington & Quincy Railroad at Cody, Wyo.; of the Union Pacific Railroad at West Yellowstone, Mont., and at Moran, Wyo.; of the Chicago, Milwaukee, St. Paul and Pacific Railroad at Gallatin Gateway, Mont.

By Bus. NORTH ENTRANCE: Northland Greyhound Lines to Livingston, Mont.; Northern Pacific Transport to Gardiner, Mont.; park buses from Gardiner to all points within the park.

EAST ENTRANCE: Continental Trailways to Cody, Wyo.; park buses from Cody to all points within the park.

WEST ENTRANCE: Overland Greyhound to West Yellowstone; park buses to all points within the park.

Write to the Yellowstone Park Company, Yellowstone Park, Wyo., for further information regarding bus trips to and through the park.

By Air. Billings, Mont.—Northwest, Western, and Frontier Airlines

Bozeman, Mont.—Northwest Airlines

Cody, Wyo.—Frontier Airlines

Jackson, Wyo.—Western Airlines

Salt Lake City, Utah—United and Western Airlines.

Transportation is available from all these points; information may be obtained from airline ticket offices and travel agents.

ACCOMMODATIONS

The Yellowstone Park Company, long associated with the history and growth of the park, operates hotels and lodges, cottages and cabins, dining rooms and cafeterias, boats, horseback trips and buses. Their rates are approved by the National Park Service.

It is advisable to request reservations in advance by writing to the Yellowstone Park Company, Reservations Department, Yellowstone Park, Wyo. Their schedule of rates for all types of accommodations will be sent you on request.

Mammoth Hot Springs and Canyon Hotels and Old Faithful Inn are open approximately June 20 to September 10; Lake Hotel from approximately June 20 to September 5. All have dining rooms; Mammoth Hot Springs and Lake Hotels have cottages, many with shower and toilet. In the Canyon Village area, new modern cottages, all with bath and heat, are expected to be ready for use by July 1, 1957, and will remain open until late September.

Old Faithful Lodge is open June 10 to September 15, Lake Lodge from June 15 to September 1, and Roosevelt Lodge from June 16 to September 1 (all approximate). All lodges have dining rooms. (*No cooking is permitted in the lodge cabins.*)

There are "economy" or "shelter" cabins, not equipped with bedding or cooking utensils although these may be rented at Mammoth, Old Faithful, West Thumb, Fishing Bridge, and Canyon, where, except at Mammoth, there are also cafeterias. *Cooking is permitted in these cabins.* Furnished cabins are also available. Showers and laundry facilities are available at Mammoth, Old Faithful, West Thumb, and Fishing Bridge.

Camp and Trailer Grounds. There are 16 improved camp and trailer grounds inside the park. They are open from approximately June 1 to September 15, but some may be used earlier and later. Their capacity varies from 4 cars (Slough Creek) to 450 (Old Faithful). Canyon Village, which is

new, accommodates 160, and Fishing Bridge, newly enlarged, 400 when complete. There are other designated sites scattered throughout the park for hikers, horseback parties, or those using boats. For these a campfire permit is required. (These can be obtained at ranger stations.)

Campgrounds are operated on a first-come, first-served basis. They are free of charge; reservations are not made. There are no water or electrical connections for trailers, but there are comfort stations in all main campgrounds, and water is available. Each site has its own grill and table, except in some of the smaller campgrounds. (A list of campsites may be obtained at ranger stations or by mail.)

SERVICES IN THE PARK

Mail Service. Visitors should have their mail sent to them in care of General Delivery, Yellowstone Park, Wyo., at one of these post offices: Mammoth Hot Springs (main), Old Faithful, West Thumb, Fishing Bridge, or Canyon (branches).

Those stopping at hotels may have their mail sent in care of the Yellowstone Park Company, Yellowstone Park, Wyo., with the name of the hotel where they are staying or plan to stay.

Telegraph and Telephone. Telegrams may be sent from hotels to any part of the world. Visitors should use Yellowstone Park, Wyo., as their telegraphic address, and inquire for messages at the main office in the Mammoth Hot Springs Hotel.

Lists of undelivered telegrams and urgent messages are posted daily at ranger stations, museums, post offices, and on bulletin boards throughout the park.

Long distance and local (intra-park) telephone calls may be made through hotel switchboards.

Medical. A well-equipped hospital, with surgeon, staff physicians, and nursing staff, is at Mammoth Hot Springs. Physicians on the hospital staff and at Old Faithful Inn and Canyon Hotel attend patients at any point in the park on call for emergency medical attention, and trained nurses are stationed in each hotel and lodge.

First aid also may be summoned from ranger stations and museums in case of emergency. Fees for hospital, medical, and ambulance service are approved by the National Park Service and are in keeping with standard charges throughout the country.

Religious Services. Church services—Protestant, Roman Catholic, Christian Science, and Latter Day Saints—are conducted in several areas throughout the park on Sunday, many of them in outdoor amphitheatres. Seventh Day Adventist services are held on Saturday.

The Protestant services are sponsored by the National Council of Churches; the main service is held at the Yellowstone Park inter-denominational chapel at Mammoth Hot Springs, where the park's resident minister is in charge.

Transportation. The Yellowstone Park Company's big yellow buses, for several decades a Yellowstone symbol, are

available for travel throughout the park from approximately June 20 to September 10.

Rent-A-Car service is available at Mammoth, Old Faithful, and Canyon, and in towns near the park—a happy thought for travelers who do not have their own and would like to do some independent exploring.

Garages, Service Stations. For automobile repairs, garages are located in the park at Mammoth, Old Faithful, Fishing Bridge, Canyon, and Gardiner.

Gasoline service stations are found in the park at Mammoth, Old Faithful, West Thumb, Lake, Fishing Bridge, and Canyon.

Stores and Newsstands. Hamilton Stores, carrying groceries and drug supplies, sportswear and camping equipment, fountains, newspapers and magazines, and other items are located at Mammoth, Old Faithful, West Thumb, Lake, Fishing Bridge, and Canyon. These are open pre- and post-season to serve campers and motorists. Haynes Inc., operates stores at Tower Fall and Roosevelt Lodge. There are newsstands in all hotels and lodges where curios, souvenirs, newspapers, magazines, smoking supplies, etc., may be purchased.

Photographs and Photo Supplies. Haynes Inc. operates picture shops at Mammoth, Old Faithful, West Thumb, Fishing Bridge, Canyon, Tower Fall, and Roosevelt Lodge, and has shops in the hotels and lodges.

RULES AND REGULATIONS

Fires. Campfires are permitted only in designated automobile campgrounds, except that:

Campfires away from established camps may be allowed by obtaining a written permit in advance at the nearest park ranger station.

Make Sure Your Fire Is Out! No burning material shall be thrown from any vehicle or saddlehorse or dropped into any inflammable material. REPORT ALL FOREST, BRUSH OR GRASS FIRES TO THE NEAREST PARK RANGER, RANGER STATION, OR MUSEUM.

Protection Of Wildlife. This park is a sanctuary for all native species of wildlife, and all hunting, killing, wounding, frightening, or capturing of any bird or other animal is prohibited.

Firearms. Use or display of firearms is prohibited. Possession must be declared at entrance station.

Preservation Of Natural Features. This is YOUR park, and it has been set aside by Congress for you to enjoy. At the same time, it is to be kept unimpaired for the use and enjoyment of future generations.

The natural formations of Yellowstone are easily damaged. Please do not injure or write upon them; do not throw objects into pools, steam vents or hot springs; do not chip or carry away specimens of rock or mineral; do not pick or destroy flowers or trees. Such acts not only are examples of stupid, ignorant behavior, but they are punishable misdemeanors.

Camping. Permitted only in specially designated campsites and is restricted to 30 days in any single campground. Campers may not leave sites unattended for more than 48 hours.

Only fallen dead trees may be taken for fuel. (Woodyards, operated on the cash-and-carry basis in the vicinity of all large campgrounds, sell presto-logs.)

Refuse shall not be thrown out or left along roads, in camp and picnic grounds, or other park lands. Trash receptacles are provided. Comfort stations are at main developed areas. Do not clean fish or wash clothes at campground hydrants. Draining or dumping refuse from any trailer, except at designated places, is not allowed. *Please don't be a litterbug.*

Fishing. Permitted only with rod and line in hand. No License is Required. The general fishing season extends from May 30 through October 15. Night fishing is not permitted. The limit of catch per day by each person fishing, and the limit of fish in possession at any one time by any one person is 10 pounds of fish (dressed weight with heads and tails intact), plus 1 fish, not to exceed a total of 5 fish. Lesser limits are imposed in some waters.

Bait. The use of eggs, minnows, or other bait fish, fresh or preserved, and the possession of such bait within the park are unlawful. Digging of worms for bait is not permitted in the park (but they may be purchased), and only artificial flies may be used as lures in certain park waters. The canning or curing of fish is prohibited.

Ask for copy of fishing regulations in order to avoid violation of closed waters, special seasons, use of certain lures, and other restrictions. Violators are subject to prosecution.

Boats. No privately owned boat, canoe, raft, or other floating craft shall be placed in operation upon park waters without a permit, which may be obtained (without charge) at entrance or ranger stations.

Boats longer than 32 feet not allowed on the lakes; boats 16 feet or under may not be operated more than one-quarter of a mile from shore. No floating craft of any type may be operated on park streams, except at Fishing Bridge and Lewis Lake channel.

Read the copy of your boat permit for complete boating regulations.

Dogs and Cats are allowed in the park on a leash or otherwise under physical restrictive control, but not on trails or in boats under any circumstances.

Lost Articles should be reported to the nearest ranger station. If found, they should be deposited at the ranger station; if articles are not claimed by their owners, they will be returned to those who found them.

Travel On Trails. If you are traveling on the trails you should not take shortcuts but should confine yourself to the established trails. Motorcycles, other motor vehicles, or bicycles shall not be operated on trails.

Thoughtless litterbugs create unnecessary work for park personnel and also damage such irreplaceable natural wonders as hot springs and geysers.

Motor Vehicles No vehicle shall be operated outside constructed roadways or designated parking areas.

No motor vehicle shall be operated without a park permit, which must be carried in the vehicle for which issued, and must be exhibited on request to park rangers. Motor vehicles shall leave or enter the park only by regular entrances and exits. Before and after main travel season, hours of exit and entrance shall be determined and posted by the superintendent. Only vehicles in sound mechanical condition may be operated in park roads. (See complete regulations for details.)

Park roads have numerous curves and grades. Excessive speed may spell major tragedy. *Courtesy and caution* must be exercised to avoid accidents. Speed of automobiles and other vehicles shall not exceed the following prescribed limits: (1) In all areas which are posted, 25 miles per hour; (2) on 8 miles of the Norris-Canyon road and the Mammoth-North Entrance road, 30 miles per hour; all trucks of 1½-ton capacity or over, 30 miles per hour; (3) cars towing trailers or other cars or vehicles of any kind, 30 miles per hour; and (4) passenger cars and trucks of less than 1½-ton capacity, 45 miles per hour on straight and open stretches.

Horses and Pack Trains. Please allow horses and pack trains safe passage. In no case shall a motor vehicle pass such animals on the road at a speed greater than 10 miles per hour, or in such manner or with such noise as to frighten them.

Obstructing Traffic. No person shall cause a motor vehicle under his control to obstruct traffic by stopping without a signal; weaving in and out of traffic, or by making right or left turns from the wrong lane, or in any other manner.

Accidents must be reported to the nearest ranger station by persons involved as soon as possible after the event.

Hitchhiking within the park is not permitted. Motorists should refrain from picking up hitchhikers.

Pedestrians should walk facing traffic, especially at night. Copies of the National Park Service General Rules and Regulations and Yellowstone National Park Special Regulations may be seen at ranger stations and museums.

Persons who commit misdemeanors, such as violations of the rules and regulations, are tried before a United States Commissioner at park headquarters. Persons who commit more serious offenses may be tried in the United States District Court at Cheyenne, Wyo.

ADMINISTRATION

A superintendent, representing the National Park Service of the United States Department of the Interior, is the official in charge of this park. All comments and inquiries regarding the management and protection of this area should be addressed to him. His post-office address is Yellowstone National Park, Yellowstone Park, Wyo.

VISITOR USE FEES

Automobile, housetrailer, and motorcycle permit fees are collected at entrance stations. When vehicles enter at times when entrance stations are unattended, it is necessary that the permit be obtained before leaving the park and be shown upon reentry. The fees applicable to the park are not listed herein because they are subject to change, but they may be obtained in advance of a visit by addressing a request to the superintendent.

All national park fees are deposited as revenue in the U. S. Treasury; they offset, in part, appropriations made for operating and maintaining the National Park System.

FOR YOUR SAFETY

While in geyser or hot springs areas, *Stay on Constructed Walks and Keep Your Children on Them.* A fall into a boiling pool is fatal; in many places, ground crust that looks safe and solid is thin—dangerous to walk on.

Bears, Deer, and Other Large Animals Are Potentially Very Dangerous. Observe Them From a Distance; Do Not Feed Them.
