The Association for the Preservation of Virginia Antiquities

NATIONAL PARK SERVICE HISTORICAL HANDBOOK SERIES NO. 2

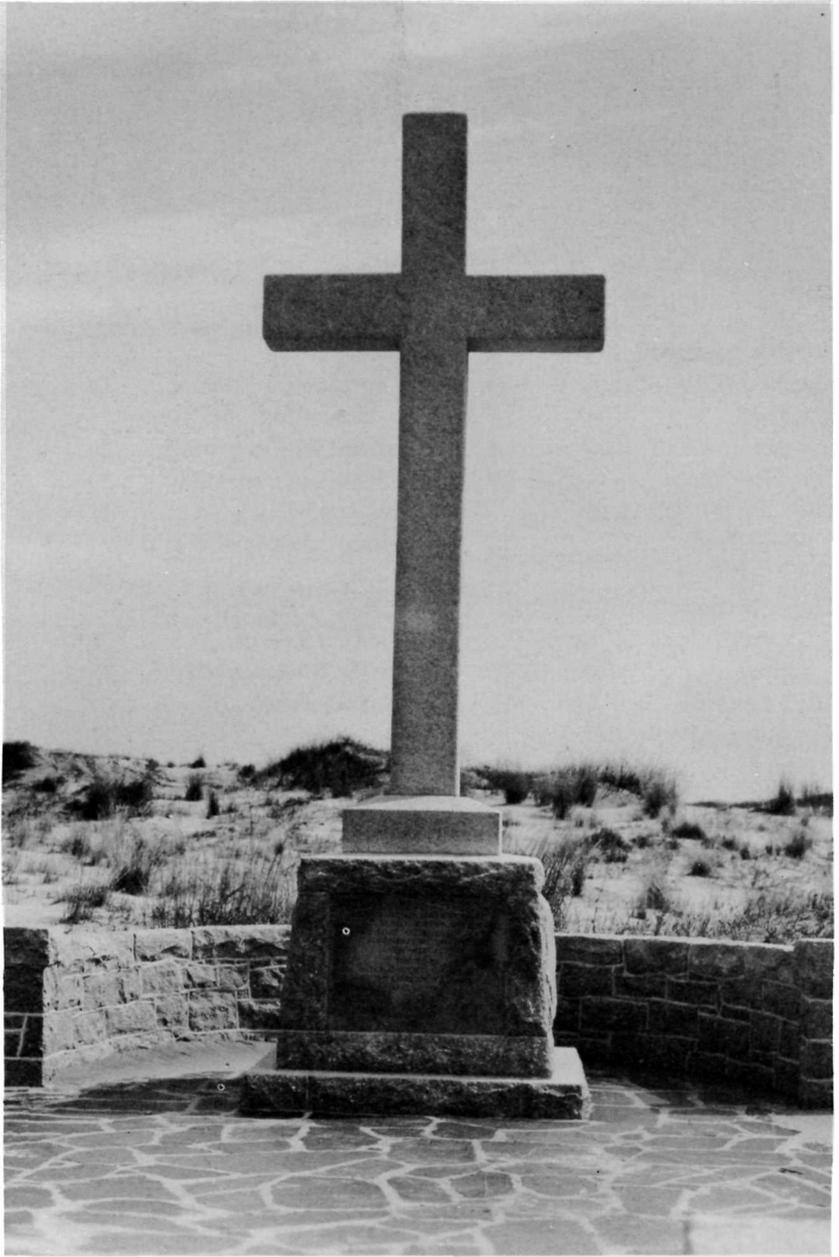

Washington, D. C., 1955

THIS PUBLICATION relates to Jamestown Island, Va. A portion of Jamestown Island is included in Colonial National Historical Park and is administered by the National Park Service of the United States Department of the Interior. Jamestown National Historic Site, the other portion of the Island, is administered by the Association for the Preservation of Virginia Antiquities. A cooperative agreement between the Association and the Department of the Interior has been in effect since 1940 providing for a unified program of development for the whole Jamestown Island area.

The Memorial Cross at Cape Henry which marks the approximate site of the first landing of the Jamestown colonists on American soil, April 26, 1607.

Jamestown was the site of the first permanent English settlement in America (1607), the point at which the first representative legislative assembly convened (1619) to set a pattern for self-government in the New World, the locale of stirring events in Bacon's Rebellion (1676-77), and the capital of the Colony of Virginia for 92 years (1607-99).

The first permanent settlement in America by the English at Jamestown was a visible manifestation of the determination of that Nation to establish itself in the New World. The overthrow of Spanish sea power during the reign of Queen Elizabeth paved the way for English colonization ventures. Enterprising Britons had already established their influence in India, the Near East, and Russia. Sir Walter Raleigh had made several unsuccessful attempts to establish an enduring settlement along the Carolina coast at Roanoke Island, events now commemorated by Fort Raleigh National Historic Site, and Sir Humphrey Gilbert had tried to no avail to make a settlement to the north in Newfoundland.

It remained for the Virginia Company of London, under its charter of April 10, 1606, to found the first permanent English settlement in America. This joint stock company, a commercial organization, from its inception assumed a national character. It was instrumental, under its charter provisions, in guaranteeing to the settlers in the New World the rights, freedoms, and privileges enjoyed by Englishmen at home and the enjoyment of their customary manner of living which they adapted to their new environment with the passage of years.

Jamestown was the site of the first settlement that grew into the Colony of Virginia and gave heart to those men who settled the colonies that came later. The first Virginians landed in May 1607, built houses and a fort, planted crops, and began the struggle for the conquest of a vast primitive land. They brought with them their church and respect for God, maintained trial by jury and their rights as freemen, and soon were developing representative government. All of these things are a part of the story of Jamestown.

In the words of James Bryce, British Ambassador to the United States at the time of the Jamestown Tercentenary, the settlement of "Jamestown was one of the great events in the history of the world—an event

to be compared for its momentous consequences with the overthrow of the Persian Empire by Alexander; with the destruction of Carthage by Rome; with the conquest of Gaul by Clovis; with the taking of Constantinople by the Turks—one might almost say with the discovery of America by Columbus.” Here was born the great English-speaking nation beyond the seas, of which Gilbert and Raleigh had dreamed; and here was the cradle of our Republican institutions and liberties.

The Story of Jamestown

On May 13, 1607, three small English ships approached Jamestown Island in Virginia—the *Susan Constant* of 100 tons commanded by Capt. Christopher Newport and carrying 71 persons; the *Godspeed* of 40 tons commanded by Capt. Bartholomew Gosnold and carrying 52 persons; and the *Discovery*, a pinnace, of 20 tons under Capt. John Ratcliffe, carrying 21 persons. During the day (as George Percy, one of the party on board, relates) they maneuvered the ships so close to the shore that they were “moored to the Trees in six fathom [of] water.” The next day, May 14, he continues, “we landed all our men, which were set to worke about the fortification, others some to watch and ward as it was convenient.” Thus, the first permanent English settlement in America was begun on the shores of the James River, in Virginia, about 20 years after the ill-fated attempts to establish a colony on Roanoke Island and 13 years before the Pilgrims made their historic landing at Plymouth, in New England.

THE ENGLISH BACKGROUND. The settlement at Jamestown, in 1607, was another step, albeit a most significant step, in England’s quest for a place in the vast New World first indicated by Columbus in his discovery of 1492 and made known to Europe through his and other expeditions. King Henry VII of England early sought to establish a claim in North America and sponsored the now famous voyage of John and Sebastian Cabot in 1497. The Cabots touched points along the Atlantic coast, and their discoveries were ever afterward pointed to with pride by Englishmen discussing their rights in the New World. As William Strachey wrote, in 1612, “. . . our voyages hither for a while might seeme to lye slumbering, yet our tytle could not thereby out sleepe ytself . . .”. Despite this, England was occupied at home and in Europe and did not press this advantage. Spain took the lead in colonial settlement and held it for decades. How many Englishmen set foot on the North American continent in the first three-quarters of the sixteenth century may never be known. They were no strangers in the fishing waters off Newfoundland, and in this region there appear to have been landings and temporary settlements. Even so, serious attempts at colonization did not begin until the reign of Queen Elizabeth, and then it was pushed vigorously by men

of the mark of Sir Humphrey Gilbert, Sir Walter Raleigh, and their associates.

Sir Humphrey lost his life in 1583 when returning from his attempted settlement of St. John's Port, Newfoundland. Sir Walter Raleigh diligently sought to establish the English flag to the south. He sent out two colonial expeditions to found a settlement on Roanoke Island in present eastern North Carolina. Both failed in their over-all purpose. It was the expedition of 1587 (the last) which set sail for the Chesapeake Bay country and landed on Roanoke Island that has come down to us as the "Lost Colony"—the settlement that saw the birth of Virginia Dare and that left the baffling inscription suggesting that the members of the Colony moved, willingly or unwillingly, to be with the Croatan Indians who lived not far from Roanoke. The early men at Jamestown knew of their countrymen who were lost in America and were under orders to seek them. This they did, but their search went unrewarded.

By 1600, England was readying herself for a concerted drive to establish colonies in the New World. The way had been prepared by the far-sighted Queen Elizabeth and her supporters. Within England there had been growth; capital had accumulated; industry was taking root; commercial organization was beginning; and an individualistic, adventure-seeking type of Englishman had taken form. Outwardly, England had grown through its naval successes and had developed a keen hostility to Spain. Individual Englishmen, each depending on his own circumstances, were seeking more profitable employment, personal freedom (particularly religious liberty), land ownership, personal advancement, adventure, and just plain change. A new England was in the making and the British Empire was about to rise in the West and in the Orient as well. With the accession of James I to the English throne, peace was made with Spain, a peace that was maintained although it was an uneasy one—from time to time little more than an armed truce. Yet, because of it, English capital came out of hiding and sought profitable investment. Business development increased and joint stock companies began to organize for overseas settlement.

Colonization was expensive, however, and required the pooled resources of many men. Advertising, which reached a peak early in the seventeenth century, was put to work in a manner that would do credit to the present day. Its use in commerce and government is by no means of recent date. Spokesmen—speakers, writers, poets, pamphleteers, playwrights, and preachers—solicited all England to take part in these new endeavors which, in their words, gave every assurance of profitable return.

The exploits of Raleigh and Gilbert, of Martin Frobisher, Michael Lok, John Davis, and Thomas Cavendish, of Sir Francis Drake, and Sir John Hawkins, and their kind had already made England conscious of the potentialities of the New World and of the need to seek a part of it. Others followed these earlier leaders. In 1602 Raleigh sent yet another ship (this under Samuel Mace) to seek the lost settlers of Roanoke, and

in the same year a vessel went out under Bartholomew Gosnold who attempted a settlement on Elizabeth's Island in present Massachusetts. Gosnold and another in this party, Gabriel Archer, were to become prominent later in the Jamestown settlement. In 1603, Martin Pring made a voyage along the northern part of Virginia. In 1605, came the expedition under George Weymouth to the Kennebec River on the New England coast. He spent some weeks here and returned to England carrying with him several Indian natives from that region.

On April 10, 1606, the first Virginia charter passed under the great seal of England. This document recognized two groups and two spheres of influence that would fall between the thirty-fourth and forty-fifth parallels of north latitude along the American coast. One was interested in North Virginia and was granted to Thomas Hanham, Raleigh Gilbert, William Parker, George Popham, and others of and for Plymouth and other English places. This group was first in the field with exploration, dispatching a ship in August 1606 under Henry Challons. In May 1607, they sent a colony to the mouth of the Kennebec in Maine, but, in the spring of 1608, after a severe winter, the settlement was given up.

The second group, organized under the charter of 1606, was that interested in south Virginia. This patent went to Sir Thomas Gates, Sir George Somers, Richard Hakluyt, Edward Maria Wingfield, and others of and for the city of London. The treasurer of the group was Sir Thomas Smith, one of the most capable businessmen of the day. Richard Hakluyt, the foremost authority on travel, foreign regions, and colonization in general, assembled helpful data and had a large part in the preparation of instructions and orders for those to be sent out as colonists. It was this group and their associates that organized, financed, and directed the expedition that reached Jamestown on May 13, 1607, and saw to it that supplies came through and reinforcements were procured in the lean years of the settlement.

The immediate and long-range reasons for the settlement were many and, perhaps, thoroughly mixed. Profit and exploitation of the country were expected, for, after all, this was a business enterprise and they were necessary for long-range activity. A permanent settlement was the objective. Support, financial and popular, came from a cross section of English life. It seems obvious from accounts and papers of the period that it was generally thought that Virginia was being settled for the glory of God, for the honor of the King, for the welfare of England, and for the advancement of the Company and its individual members. In England and in Virginia they expected and did carry the word of God to the natives, although not with the same verve as the Spanish. They expected to develop natural resources, to free the mother country from dependence on European states, to strengthen their navy, and to increase national wealth and power. They expected to be a thorn in the side of the Spanish Empire; in fact, they hoped one day to challenge and overshadow that empire. They sought to find the answer to what seemed to

be unemployment at home. They sought many things, not the least of them being gold, silver, and land. As the men stepped ashore on Jamestown Island, perhaps each had a slightly different view of why he was there, yet some one or a combination of these motives was probably the reason.

THE FIRST DAYS IN VIRGINIA. The expedition of 1607 included a cargo of supplies and 144 persons, of whom 104 or 105 (depending on which of the more detailed contemporary accounts is accepted) were to remain in Virginia as the first settlers. The expedition left England late in 1606. It moved down the Thames River from London on December 20 and, after a slow start, the ships proceeded over the long route through the West Indies. There were stops in the islands, new experiences, and disagreements among the leaders. Captain Newport was in command, and the identity of the councilors who were to govern in Virginia lay hidden in a locked box not to be opened until their destination had been reached. Dissension at one point led to charges against Capt. John Smith who reached the New World in confinement. This was suggestive of the later personal and group feuds and disagreements that plagued the first years of the Virginia Colony.

The "Land of Virginia" was first seen by the lookout on April 26, and just a little later in the same day a party was sent ashore at Cape Henry to make what was the first landing in the wilderness which they came

to conquer. Having been aboard ship for many weeks, the settlers found the expanse of land, the green virgin trees, the cool, fresh water, and the unspoiled landscape a pleasant view to behold. At Cape Henry they saw Indians and several of the party were wounded by their arrows, notably Capt. Gabriel Archer, one of the experienced leaders. They built a "shallop" (a small boat), went exploring into the country for short distances by land and water, enjoyed the spring flowers, and tasted roasted oysters and "fine beautiful strawberries." On April 29, a cross was set up among the sand dunes. The next day the ships were moved from Cape Henry into Chesapeake Bay to the site on Hampton Roads which they named Point Comfort (now Old Point Comfort).

For about 2 weeks, explorations were made along both banks of the James, below and above Jamestown, from its mouth to a point as far upstream perhaps as the Appomattox River (Hopewell, Va.). Parties went ashore to investigate promising areas, and communication was established with the native tribes. On May 12, a point of land at the mouth of Archer's Hope (now College) Creek, a little below Jamestown, was examined in detail. Capt. Gabriel Archer was particularly impressed with this location and urged that it be the point of settlement. The soil seemed good, timber and wildlife were abundant, and it appeared adaptable for defensive measures if these should become necessary. It was not possible, however, to bring the ships close to the shore, and consequently Archer's Hope was rejected. From this site the ships moved directly to Jamestown, where they arrived May 13. On May 14, they landed and broke ground for the fort and the town that ultimately won the distinction of the first permanent English settlement in America and the capital of the Virginia Colony for almost a century.

In May 1607, the days were warm; the nights, cool. Life was stirring in the wilderness and nature had been generous, the colonists thought. There were fruits, abundant timber, deer and other animals for food, and a not too numerous native population. The hot, humid weather of mid-summer and the snow, ice, and emptiness of winter were not in evidence. The choice of a site for settlement was both good and bad. The anchorage for ships at Jamestown was good. The Island had not then become a true island and had an easily controlled dry land isthmus connection with the mainland. As the river narrows here, it was one of the best control points on the James. It was not used by the Indians; and it was a bit inland, hence somewhat out of range of the Spanish menace. Arable land on the Island was limited by inlets and "guts." The swamps were close and bred mosquitoes in abundance and, with contamination so easy, drinking water was a problem. All of these facts became evident to these first English Americans as the months went by.

When the orders were opened after arrival in Virginia, it was found that the governing body in the Colony was made up of seven councilors. Edward Maria Wingfield, of gallant service in the Low Countries; Bartholomew Gosnold and Christopher Newport, both seasoned seamen

and captains; John Ratcliffe, who piloted the *Discovery* to Virginia; John Martin, an earlier commander under Drake; John Smith, already an experienced adventurer; and George Kendall, a cousin of Sir Edwin Sandys who later was to play a dominant role in the Virginia Company. To this list can be added other prominent names—George Percy, brother to the Earl of Northumberland and a trained sailor; Gabriel Archer, a lawyer who had already explored in the New England country; and Rev. Robert Hunt, the vicar at Jamestown, whose pious and exemplary living was noted by his associates.

THE FORT. The work of establishing Jamestown and of exploring the country round about began almost simultaneously. The several weeks between May 13 and June 22, when Newport left Virginia for a return to England, were busy ones. At Jamestown an area was cleared of trees and the fort begun. The soil was readied and the English wheat brought over for the purpose was planted. At this point Newport, in one of the small boats, led an exploring party as far as the falls of the James (near present Richmond). He was successful in learning a great deal about the country, but did not succeed in his search for gold or silver. He was absent from Jamestown about a week and returned to find that the Indians had launched a fierce attack on the new settlement which had been saved, perhaps, by the fact that the ships were near at hand. These afforded safe quarters and carried cannon on their decks that had a frightening effect on the natives.

The fort was completed about mid-June. It was triangular in shape, with a "Bulwarke" at each corner which was shaped like a "halfe Moone." Within the "Bulwarkes" were mounted four or five pieces of artillery—demiculverins which fired balls of about 9 pounds in weight. The fort enclosed about 1 acre with its river side extending 420 feet and its other sides measuring 300 feet. The principal gate faced the river and was in the south side (curtain) of the fort, although there were other openings, one at each "Bulwarke," and each was protected by a piece of ordnance. The church, storehouses, and living quarters were flimsily built of perishable materials, within the walls of the palisaded fort, along fixed streets arranged around an open yard. For the first few years this fort was Jamestown.

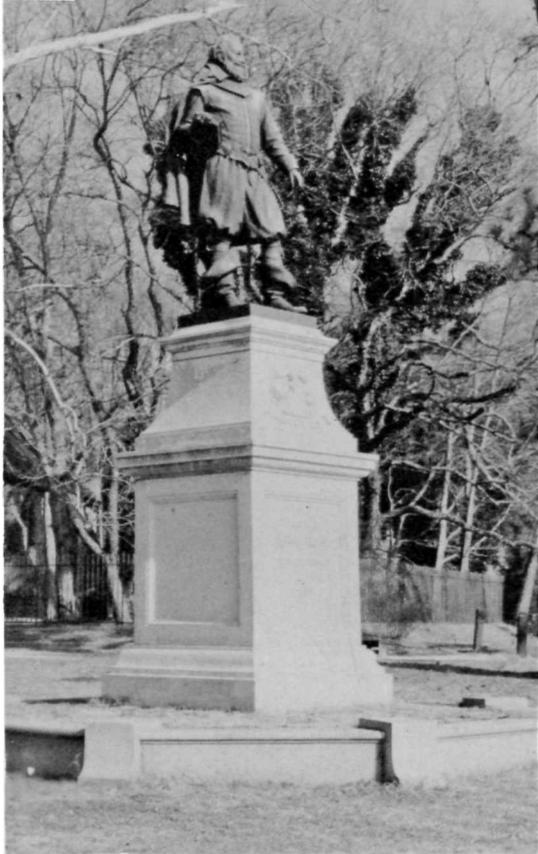

Before the fort was completed the wheat had come up and was growing nicely, as George Percy wrote in what was probably the first essay on farming along the James River. About June 10, John Smith, partly through the intercession of Robert Hunt, was released and admitted to his seat on the Council. Relations with the Indians improved. On June 21, the third Sunday after Trinity, the first Anglican communion at Jamestown was celebrated. "We had a comunyon. Capt. Newport dynd ashore with our dyet, and invyted many of us to supper as a farewell." The next day, Christopher Newport raised anchor and began the return trip to England. He took letters from those to remain in Virginia and

carried accounts describing Virginia and the events that had occurred. The settlement had been made, and the future seemed promising.

SUMMER AND FALL, 1607. Within the short span of 2 months, conditions changed drastically. The Indians became cautious and distrustful, and provisions, not sufficiently augmented from the country, began to run low. Spoilage destroyed some food, and, with the coming of the hot, humid weather, the brackish drinking water proved dangerous. In August, death struck often and quickly, taking among others the stabilizing hand of Captain Gosnold. Inexperience, unwillingness, or inability to do the hard work that was necessary and the lack of sufficient information about how to survive in a primeval wilderness led to bickering, disagreements, and, to what was more serious still, inaction. They forgot a most important bit of advice that had been given them by "His Majesties Council for Virginia": ". . . the way to prosper and achieve good success is to make yourselves all of one mind for the good of your country and your own . . .".

On arrival in Virginia the resident councilors, as outlined in their orders, met and named one of their number as president. Real power was with the Council, however, and the president was without actual independent authority. This was a serious defect (corrected in the second company charter in 1609) which prevented a well-directed and coordinated program at Jamestown during the first 3 years. As the first summer wore on it was natural that hostility should develop toward the titular head of the Colony. Had the first president, Edward Maria Wingfield, been a stronger, more adventurous, and more daring man, conditions might have been a little better, despite his lack of real authority. He was not the leader, however, to act and to reason later. Consequently, opinion was arrayed against him and charges, some unjust no doubt, were formed that led to his deposition and replacement in one of the two celebrated jury trials which occurred at Jamestown about mid-September. His successor, perhaps no more able, was John Ratcliffe who continued for about a year until deposed and replaced by Matthew Scrivener, one of those who came over with the first supply. It was a little later, in 1608, that Capt. John Smith took the helm as chief councilor, which was what the president really was. It was under the presidency of Ratcliffe, however, that Smith emerged as an able, experienced leader, who preferred action to inaction even though it might be questioned later. His work and his decisions, sometimes wise, sometimes not so wise, did much to insure the survival of the Colony.

When the first cool days of approaching autumn touched Jamestown, in 1607, spirits rose and hopefulness supplanted despair. Disease, which had reduced the number to less than 50 persons, subsided; the oppressive heat lessened; and Indian crops of peas, corn, and beans began to mature. Friendly relations were established with the natives, and barter trade developed. As the leaves fell, game became easier to get, ducks

Statue of Captain John Smith, by William Couper, which stands near the Old Church Tower.

multiplied in the ponds and marshes, and life in general seemed brighter. Work was resumed at Jamestown in preparation for the coming winter, and exploration was undertaken. It was in December, while investigating the Chickahominy River area, that Smith was taken by the Indians. He was eventually carried before Powhatan who released him, some say through the intercession of the young Pocahontas. This incident Smith did not mention in his detailed account of the events of the Colony written several months later. It was not until a number of years later, in fact, that this romantic story evolved in its present form.

THE FIRST SUPPLY. Upon returning to Jamestown, Smith was caught in the meshes of a feuding Council. All was forgotten early in January, however, when Newport reached Jamestown with the first supply for the settlers. He brought food, equipment, instructions, and news from home. His cargo was not sufficient, but for the moment this was overlooked. The two ships of the supply had left England together, but the second did not reach Virginia until April.

Shortly after Newport's arrival in January, disaster came to Jamestown. Fire swept through the fort, consuming habitations, provisions, ammunition, and even some of the palisades. This was a serious blow in the face of winter weather. With the help of Newport and his sailors, the church,

storehouse, palisades, and cabins were partially rebuilt before he sailed again for England early in April. Much more could have been done had he not consumed so many days in a pompous visit and lengthy negotiations with the wily Powhatan. Then, too, the ships had to be loaded for the return voyage, for the London backers were loudly calling for profitable produce. The first of the spring months were spent in cutting cedar logs and preparing "clapboards" for sale in England, and a little later there seems to have been a mild "gold rush" at Jamestown as some hopeful looking golden colored soil was found. This all delayed early spring clearing and planting, and boded ill for the coming summer when Ratcliffe wasted precious days building a house suitable to his position and Smith engaged in important, yet not particularly pressing, explorations.

THE FIRST MARRIAGE AT JAMESTOWN. It was in September 1608 that Smith became president in fact and inaugurated a program of physical improvement at Jamestown. The area about the fort was enlarged and the standing structures repaired. At this point, in October, the second supply arrived, including 70 settlers, who, when added to the survivors in Virginia, raised the over-all population to about 120. Among the new arrivals were two women—Mistress Forrest and her maid. Several months later, in the church at Jamestown, the maid, Ann Burras, was married to one of the settlers, John Laydon, a carpenter by trade. This marriage has been ranked as "the first recorded English marriage on the soil of the United States." Their child, Virginia, born the next year, was the first to be born at Jamestown.

EARLY INDUSTRY. With the second supply came workmen sent over to produce glass, pitch, soap ashes, and other items profitable in England. These men, including some Poles and Dutchmen, were quickly assigned to specific duties. So rapidly did they begin that "trials" of at least one product, glass, were sent home when Newport left Jamestown before the end of the year. As usual, in addition to settlers and supplies, Newport brought more instructions from the Company officials. The Colony was not succeeding financially, and it was urged that the Council spend more time in the preparation of marketable products. It was urged, too, that gold be sought more actively; that Powhatan be crowned as a recognition befitting his position; and that more effort be expended in search of the Roanoke settlers. These things were all desirable, but, at the moment, impracticable. No one understood this better than did Smith, who spoke his mind freely in a letter he wrote for dispatch to the authorities at home. Nevertheless, these projects were emphasized, and the more pressing needs of adequate shelter and sufficient food were neglected.

In the interval from about February to May 1609, Smith reported considerable material progress in and about Jamestown. Perhaps 40 acres

Over-all view of the four glass furnaces located by archeological excavation on Glass House Point.

were cleared and prepared for planting in Indian corn, the new grain that fast became a staple commodity. A deep well was dug in the fort. The church was re-covered and 20 cabins built. A second trial was made at glass manufacture in the furnaces built late in 1608. A block-house was built at the isthmus which connected the Island¹ to the mainland for better control of the Indians, and a new fort was erected on a little creek across the river from Jamestown. Smith was now in command, as his fellow councilors either had returned to England or were dead. About this time there came a new disaster. With all attention centered on the numerous construction projects, insufficient protection was given the meager supply of grain. When discovered, rats had consumed almost all of the corn stores. Faced with this situation, Smith found it necessary to scatter the settlers, sending some to live with the Indians and some to eat at the oyster banks where the unbalanced oyster diet is reported to have caused their skin "to peel off from head to foot as if they had been fleade." Only "a small garde of gentlemen & some others [were left] about the president at James Towne."

In midsummer of 1609, conditions at Jamestown were not good, although it is doubtful that they were any worse than during the two previous summers. The settlers were becoming acclimated, and they

¹ Although Jamestown Island was not a true island until the isthmus was washed out about the period of the Revolution, it was called an island even in the early years of the Colony.

were learning the ways of the new country. Supplies were low, yet the number of colonists was small, and a good harvest and a good fall might have improved matters had not some 400 new, inexperienced settlers sailed into the James without their leaders, without instructions, and with damaged supplies. To add to other complications, they brought fever and plague. In the selection of prospective settlers for the voyage the standards had been low, and too many ne'er-do-wells, and even renegades, had been included. This was the third supply, and it reached Jamestown in August 1609.

THE SECOND COMPANY CHARTER AND THE THIRD SUPPLY. The Company had received a new charter in May 1609 which corrected some of the defects of the old and made provision for a strong governor to rule in the Colony. Despite discouraging news from Virginia, the supporters of the enterprise did not abandon their plans to maintain the Colony. The second charter, as this was called, was subscribed and incorporated by 56 companies of London and 659 persons, of whom 21 were peers, 96 knights, 11 doctors, ministers, etc., 53 captains, 28 esquires, 58 gentlemen, 110 merchants, 282 citizens, and others not classified. Altogether they represented a cross section of English life in that period.

It was resolved to send a much larger expedition to Virginia than the three sent prior to this date. It went out in June under Sir Thomas Gates and with him were Sir George Somers and Captain Newport. There were nine ships and about 500 settlers. The voyage was uneventful until they ran into a stiff hurricane that broke up the fleet and cast ashore in the Bermuda Islands the flagship with its three commanders. The rest of the fleet, except one small ship lost at sea, limped into the James and went on to Jamestown.

Returning to Virginia in the third supply were several men who had been earlier leaders in the Colony and who were now all hostile to Smith—Archer, Ratcliffe, and Martin. A confusing scene developed over command. The old leaders, particularly Smith, refused to give way to the new in the absence of Gates, the appointed governor, and his instructions. There was considerable bickering which led to an uneasy settlement, leaving Smith in charge for the duration of his yearly term, now almost expired.

It was obvious to everyone that there were too many men for all to remain at Jamestown. John Martin was sent to attempt a settlement at Nansmond, on the south side of the James below Jamestown, while Capt. Francis West, brother of Lord Delaware, was sent to settle at the falls of the James. Returning to Jamestown after an inspection tour at the falls, Captain Smith was injured by burning gunpowder and incapacitated. The implication in the documents of the period is that Ratcliffe, Archer, and Martin used this opportunity to depose him and to compel him to return to England to face their charges against him. These three men, failing to agree on a replacement from their own number, per-

sueded George Percy to accept the position of president. Percy was in command during the terrible winter that followed.

THE "STARVING TIME." The winter of 1609–10 has been described through the years as the "starving time"—seemingly, an accurate description. It saw the population shrink from 500 to about 60 as a result of disease, sickness, Indian arrows, and malnutrition. It destroyed morale and reduced the men to scavengers stalking the fort, fields, and woods for anything that might be used as food. When spring came there was little spirit left in the settlement. It would seem unjust to attribute the disaster to Percy, who did what he could to ameliorate conditions by attempting trade and keeping the men busy. The "starving time" appears to have been caused by an accumulation of circumstances.

There was the matter of the third supply which arrived in such poor condition very late in the season. Bickering prevented measures that could have been taken to prepare for the winter: Dissension continued even after Smith's departure. Then, too, the Indians knew of conditions at Jamestown, for they actually kept scouts in the fort much of the time. They were learning the ways of the white man and had come to see that he was most vulnerable in the winter season. Heretofore they had supplied him corn—by gift, by trade, or unwillingly through seizure. In the winter of 1609–10, they had a good opportunity to make him suffer, and throughout this period the Indians were openly hostile. Perhaps the increasingly heavy use of force and armed persuasion in dealing with them had resulted in this attitude which, from their point of view, proved highly effective. In the fall of 1608, they had forced the settlers in from Nansmond and the falls. Then, in the winter of 1609–10, Powhatan captured and killed Ratcliffe who had gone to trade with him. All through that winter it was dangerous to be alone far from the fort.

Not having sufficient stores set aside, not able to deal with the natives, and without the use of the resources of the countryside, there is small wonder that conditions became serious, even desperate, for the settlers. Those few men fortified on Hampton Roads under Capt. James Davis (after Captain West, perhaps under threat from the crew, left Virginia for England in the Colony's best ship) fared far better than did those at Jamestown. Even the coming of spring failed to restore full hope and vitality to the survivors, yet certainly it must have been good to know that winter was over.

VIRGINIA ALMOST ABANDONED. In May 1610, the hearts of the weary settlers were gladdened when Sir Thomas Gates, their new governor, sailed into the James. For about a year he and the survivors of the wreck of the *Sea Venture* had labored in Bermuda to make possible the continuation of their voyage to Virginia. The last part of the journey was made in two boats built by them in Bermuda—the *Patience* and the *Deliverance*, names suggestive of their thankfulness for survival. It was

not a pleasant sight that greeted them at Jamestown. Ruin and desolation were everywhere. Gates, with his Council, on July 7, 1610, wrote that Jamestown seemed:

“rather as the ruins of some auntient [for]tification, then that any people living might now inhabit it: the pallisadoes he found tourne downe, the portes open, the gates from the hinges, the church ruined and unfrequented, empty howses (whose owners untimely death had taken newly from them) rent up and burnt, the living not hable, as they pretended, to step into the woodes to gather other fire-wood; and, it is true, the *Indian as fast killing without as the famine and pestilence within.*”

Gates promptly distributed provisions, such as he had, and introduced a code of martial law, the code that was strengthened later by Delaware and made famous by its strict enforcement under the governorship of Sir Thomas Dale. After surveying the condition of the settlement and realizing that the supplies he had brought would not last 3 weeks, Gates took council with the leaders. They decided to abandon the settlement. On June 7, 1610, the settlers, except some of the Poles and Dutchmen who were with Powhatan, boarded the ship, left Jamestown, and started down the James.

The next morning, while still in the river, advance word reached Gates that Lord Delaware had arrived at Point Comfort on the way to Jamestown and was bringing 150 settlers and a generous supply. The bad news carried to England by the returning ships of the third supply, late in 1609, had caused considerable stir in Virginia Company circles and had resulted in Delaware's decision to go to Virginia. Learning of the new supply, Gates hastened back to Jamestown. The new settlement had been saved in a manner that was recognized at that time as an act of "Providence."

LORD DELAWARE REACHES JAMESTOWN. On June 10, Delaware reached "James Citty" and made his landing. He entered the fort through the south gate, and, with his colors flying, went on to the church where Rev. Richard Buck delivered an impressive sermon. Then his ensign, Anthony Scott, read his commission, and Gates formally delivered to him his own authority as governor. Delaware's speech to the assembled colonists cheered them, advised them, warned them, and reproached them. Thanks to the pen of William Strachey, we have a good account of these events, including the best description of the fort, church, and cabins that is now known to have been preserved. With the arrival of Delaware, the settlement was given new life and new hope. Lean times lay ahead, yet the most difficult years lay behind. Virginia now had a government that made for stability under the governor, and the old settlers, who, a little later, came to be called "Ancient Planters," had learned well by experience.

Gates, after dealing with the Indians, left for England. Delaware, who continued to live aboard ship for a time, called a Council, reorganized the colonists, and directed operations to promote the welfare of the Colony, including the construction of two forts near Point Comfort. He fell sick, however, and, after a long illness, was forced to leave Jamestown and Virginia in March 1611, leaving the now veteran administrator, George Percy, as governor in charge. With Delaware went Dr. Lawrence Bohun, who had experimented extensively with the curative powers of plants and herbs at Jamestown.

SIR THOMAS DALE AND MILITARY LAW. In May, Sir Thomas Dale, on military leave from his post in the Low Countries, arrived as deputy governor of Virginia. He proceeded to give form and substance to the martial law which had been evoked by his predecessors. It led to rather complete regimentation, and he was severely criticized for it later, particularly by those hostile to his administration. He began by posting proclamations "for the publique view" at Jamestown. Later, he thoroughly inspected suitable settlement sites and surveyed conditions generally. He wrote, on May 25, 1611, that on arrival at Jamestown he found ". . . no corn sett, some few seeds put into a private garden or Two; but the cattle, cows, goats, swine, Poultry &c to be well and carefully on all hands preserved and all in good plight and likeing." To get things in order at the seat of government, one party was designated to repair the church, another to work on the stable, another to build a wharf. When things were reasonably well in hand at Jamestown, he made plans to push the decision to open a new settlement above Jamestown which would become the real center of the Colony. The reasons for such a removal of the seat of government are well known—not sufficient high land, poor drinking water, too much marsh, and a location not far enough upstream to be out of reach of the Spanish.

JAMESTOWN, 1611-16. Under Dale, from May 1611 to 1616, and under Gates who replaced him for several years, beginning in August 1611, the emphasis was away from Jamestown, but the capital was not actually moved.

In 1612, "Master George Percie . . . [was busy] with the keeping of Jamestown" while much of the Colony had been "moved up river." The first settlement was then looked upon as chiefly a place of safety for hogs and cattle. In 1614, it was made up of "two faire rowes of howses, all of framed Timber, two stories, and an vpper Garret or Corne loft high, besides three large, and substantiall Storehouses ioyned together in length some hundred and twenty foot, and in breadth forty . . . this town hath been lately newly, and strongly impaled, and a faire platforme for Ordnance in the west Bulworke raised." Without the town ". . . in the Island [were] some very pleasant, and beutifull howses,

two Blockhouses . . . and certain other farme howses." In 1616, it was a post of 50 under the command of Lt. John Sharpe, who was acting in the absence of Capt. Francis West. Thirty-one of these were "farmors" and all maintained themselves with "food and rayment."

The Gates-Dale 5-year administration (1611-16) actually saw Virginia established as a going concern. The role of Dale in all of this seems to have been a heavy one. Martial law brought order and uniformity in operations and compelled the people to go to work. Dale saw to it that corn was planted and harvested and that the laws were observed. He made peace with the Indians.

So effective were Dale's measures that one of his contemporaries, John Rolfe, wrote "whereupon a peace was concluded, which still continues so firme, that our people yearlyly plant and reape quietly, and travell in the woods a fowling and a hunting as freely and securely from danger or treacherie as in England. The great blessings of God have followed this peace, and it, next under him, hath bredd our plentie . . .". All this was accomplished when the fortunes of the Virginia Company were at a low point and little support was being sent to the Colony. John Rolfe then went on to predict that Dale's "worth and name . . . will out last the standing of this plantation . . .".

Martial law, strictly administered at first, was gradually relaxed in application as conditions stabilized, and within a few years Dale took the step of granting 3-acre plots to private men for their enjoyment outside of the common store. This was a big step in the evolution of the private ownership of land. In the beginning, ownership was communal and Company controlled. In 1609, a future division of both land and profits was anticipated, but it was about 1619 before individual grants were made. A part of this evolution was the headright system of acquisition, whereby persons were rewarded for venturing to Virginia themselves, or their capital. Dale's grants of a semiprivate nature, about 1615, were a step in this evolution as well. The headright system which developed at Jamestown and on the banks of the James was later adapted in other colonies and continued in use for generations.

Gates and Dale in their administration had the help of other enterprising and daring early Virginians. There was Capt. Samuel Argall whose later work as governor of the Colony has sometimes been criticized, especially his handling of the Company finances. This should not becloud his earlier helpfulness in getting Virginia established. He pioneered in making a direct crossing of the Atlantic to save time and to avoid the Spanish, who now were fearful that the Virginia enterprise might succeed and were sending spies to Virginia. (Some of these spies were captured and interned at Jamestown.) Argall led in exploration, both in Virginia waters and northward along the coastline. He was adept at shipbuilding and in the Indian trade. It was evidently he who discovered the best fishing seasons and the fact that the fish made "runs" in the bay and in the rivers. He made an open attack on the French settle-

Monument to Pocahontas, by William Ordway Partridge, which stands near the entrance to the Grounds of the Association for the Preservation of Virginia Antiquities.

ments to the north in New England and Nova Scotia, returning to Jamestown with his captives.

POCAHONTAS. While on a trading expedition on the Potomac, Argall captured Pocahontas and brought her prisoner to Jamestown in an attempt to deal with her father, Powhatan. Pocahontas was no stranger at Jamestown. She had often visited there before, once in the spring of 1608 to seek some of her countrymen held as hostages in the fort.

In 1613, Pocahontas was well received at Jamestown, where she had not been for some time; and when her father refused to pay the price asked for her ransom, she was detained. Later, she preferred life with the English and did not wish to return to her native village. She was placed under the tutelage of Rev. William Whitaker who instructed her in the Christian faith. Eventually she was baptized, and, in April 1614, in the church at Jamestown, she married John Rolfe, one of the settlers. This was a celebrated marriage that did much to improve relations with the Indians. About 1616, the couple went to England where Pocahontas was entertained at court. She died there as she was about to return to Virginia, in 1617, and her body rests at Gravesend. She had one son, Thomas Rolfe, who later went to Virginia. Through him many today can trace their ancestry back to Pocahontas.

TOBACCO. After the death of Pocahontas, John Rolfe came back to Virginia alone to resume the work which he had begun there as early as 1610. Perhaps he continued his work with tobacco which had already resulted in a plant that could compete in taste and quality with that which had given the Spanish a monopoly of the tobacco market.

In the first years of the settlement every effort had been made to find products in the New World that would assure financial success for the settlers and the Company. Pitch, tar, timber, sassafras, cedar, and other natural products were sent in the returning ships. Attempts to produce glass on a paying scale proved futile, as did early efforts to make silk, using the native mulberry trees growing in abundance. The glass furnaces fell into disuse, and rats ate the silkworms. The native tobacco plant, found growing wild was “. . . not of the best kind . . . [but was] poore and weake, and of a byting tast . . .” and held little promise.

About 1610–11, the seed of a different species of the plant was imported from Trinidad, then famous for the quality of its tobacco. Later some came from Venezuela. These were planted and a process of selection and cross-breeding began which resulted in the commercially valuable Virginia leaf. John Rolfe, an ardent smoker himself, has been credited as the pioneer English colonist in this experimentation with the tobacco plant.

In addition to the improvement of the plant, Rolfe was one of the first regularly to grow tobacco for export and as such was the father of the Virginia tobacco trade and industry. The first experimental shipment of the newly developed Virginia leaf came about 1613, and because of its pleasant taste it was well received in some quarters. Production was slow for several years. Dale restricted its cultivation until basic commodities, such as corn, were well advanced. In the 1615–16 period only 2,300 pounds reached London from Virginia. Capt. George Yeardley, the next to govern, gave the new crop his whole-hearted support, with the result that in 1617 exports reached the 20,000 pound total, and by 1619 this had been more than doubled. Thus, a new trade and industry were born in the Colony, which proved to be the economic salvation of Virginia, and provided a means for making slavery profitable. Tobacco and slavery together led to the development of important characteristics of the whole social, political, and economic structure of the Old South. One of the immediate effects of tobacco culture in Virginia was the impetus it gave to the expansion of the area of settlement and to the number of settlers coming to Virginia.

THE SPREAD OF SETTLEMENT. Jamestown was planned as the first permanent English settlement in Virginia. The fixed intention was to establish other seats as soon as possible. As the limitations of Jamestown became obvious, the desire for other town sites was intensified. Soon after the settlement was made at Jamestown, temporary garrisons were placed at outlying points for protective and administrative reasons—at Kecough-

tan (Hampton-Newport News), Cape Henry, and at the falls of the James. The first efforts in this direction, except at Kecoughtan, ended in the fall of 1609 under pressure from the Indians. With the arrival of Delaware, Kecoughtan (renamed Elizabeth City in 1621) was established as a permanent settlement. Dale and Gates went on to establish the city of Henricus (Henrico) well up the James near the falls. Then came Charles City (the earlier Bermuda Nether Hundred) which developed into the last of the four settlements established by the Company, each of which had the designation "city." These four settlements were the only towns specifically set up by the Company and consequently under its complete control. These later came to be mentioned in the records as the "Four Ancient Boroughs" or "four ancient Incorporations." As one of these, Jamestown became the center of the political subdivision that developed into one of the original Virginia shires in 1634. Within the next decade the term county replaced that of shire, and today, although Jamestown has ceased to exist as a corporate organization, James City County continues to function as the oldest governing unit in English America.

Although the four "cities" constituted the first settlements in Virginia and were the only ones established directly under Company control, they were but the beginning. About 1616, a new plan gave rise to the creation of settlements known as "particular plantations," sometimes called "hundreds" as a result of the practice of awarding land on the basis of 100 acres or of sending settlers in groups of the same number. These were established with Company permission, which included a grant of land made to individual groups of stockholders organized for the purpose of setting up a specific settlement. The first of these was Martin's Hundred, in 1617, and others followed rapidly. By the summer of 1619, there were seven particular plantations already functioning, in addition to the original "cities," a term sometimes thought to derive from the form of government being used by the "City of Geneva" in Switzerland which was held in high esteem by some of the Company officials, particularly by Sir Edwin Sandys who became Treasurer of the Virginia Company in 1618.

With the spread of settlement east and west along the James and outward along the rivers and creeks as well, Jamestown lay approximately in the center of an expanding and growing Colony. It was the capital town and the principal center of the Colony's social and political life. In size it remained small, yet it was intimately and directly related to all of the significant developments of the seventeenth century. Its physical aspects changed with the evolution of seventeenth century architectural patterns and designs. Life in the town was varied and perhaps representative of the best in the Colony for almost a century. As wealth accumulated, the manner of living broadened and improved. There is strong evidence that Jamestown was the first to feel the impact of the advantages and efforts that this produced, particularly in the first half

century of its existence. Material progress is evident as early as 1619 in the letter of John Pory, Secretary of the Colony, written from Virginia late in that year:

“Nowe that your lordship may knowe, that we are not the veriest beggars in the worlde, our cowekeeper here of James citty on Sunday goes accowtered all in freshe flaming silke; and a wife of one that in England had professed the black arte, not of a schollar, but of a collier of Croydon, weares her rough bever hatt with a faire perle hatband, and a silken suite thereto correspondent.”

THE BEGINNING OF REPRESENTATIVE GOVERNMENT. In 1618, there were internal changes in the Virginia Company that led to the resignation of Sir Thomas Smith, as Treasurer, and to the election of Sir Edwin Sandys as his successor. This roughly corresponded to changes in Company policy toward the administration of the Colony and to intensified efforts to develop Virginia. It led to the abolition of martial law, to the establishment of individual property ownership, and greater freedom and participation in matters of government. Virginia already enjoyed a high degree of religious freedom due, perhaps, to the fact that a number of Company officers were strongly under the influence of the puritan element within the Church of England. This, together with the fact that Virginia was not settled purely for religious reasons, caused less stress to be put on absolute uniformity in church matters. Sir George Yeardley, recently knighted, returned to Virginia as governor, in April 1619, and was the first spokesman in the Colony for the new policy toward Virginia. In England it had been ably advanced on behalf of the Colony by Sir Edwin Sandys, the Earl of Southampton, and John and Nicholas Ferrar.

Soon after his arrival, Yeardley issued a call for the first representative legislative assembly in America which convened at Jamestown on July 30, 1619, and remained in session until August 4. This was the beginning of our present system of representative government in America. The full intentions behind the moves that led to this historic meeting may never be known. It seems to have been an attempt to give to the Englishmen in America those rights and privileges of Englishmen that had been guaranteed to them in the original Company charter, rather than a planned attempt to establish self-government in the New World on a scale that might have been in violation of English law and custom at the time. Whatever the motive, the significance of this meeting in the church at Jamestown remains the same. This body of duly chosen representatives of the people has continued in existence and its evolution leads directly to our State legislatures and to the Congress of the United States.

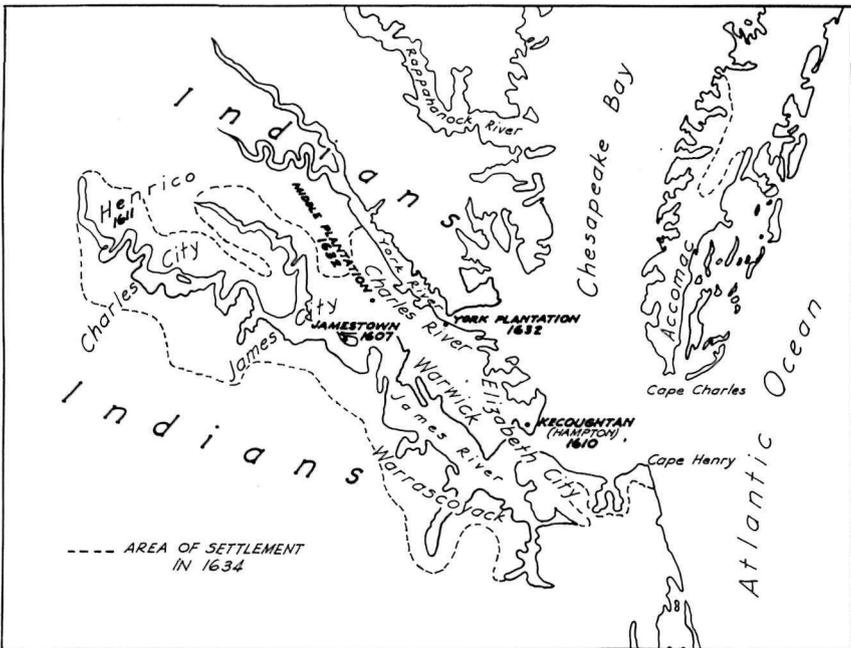

DEVELOPMENTS, 1619-24. Another significant development of 1619 was the arrival of “maids” sent by the Company to become wives of the

settlers. Homes and children were conducive to established family life and permanent residence. The Company recognized this, and other ships followed with passenger lists made up of young ladies seeking their fortunes in Virginia. This was but a part of the new program of the Company. However, many women had arrived prior to that date and were already established with their families at Jamestown and elsewhere.

The third of the momentous events for Jamestown and Virginia in the year 1619 was the arrival of Negroes in the James River in a Dutch warship. These remained in Virginia, some finding a home at Jamestown, in what was actually the introduction of Negro slavery into the Colony. It was more than a generation before the institution of Negro slavery began to be entrenched as the backbone of the economic life in Virginia, yet this event of 1619 was the first move in that direction.

Under Dale, the emphasis was away from Jamestown, yet later governors found the original seat more desirable. Capt. Samuel Argall, who succeeded Yeardley as deputy governor in 1617, wrote that he advanced physical improvements prior to his hasty withdrawal from Virginia in the spring of 1619 to avoid arrest under charges of mismanagement of Company affairs. Argall had been the first to prescribe limits for Jamestown. Yeardley followed him as governor, and for the next few years Jamestown, at this time most often called "James City," witnessed considerable growth and activity. The town, long before, had expanded outside of the fort and spread along the shore on the extreme

Virginia in 1634

west end of the Island. The borough or incorporation, of which it was the center, extended west to the Chickahominy River and down river as far as Hog Island. Its territory was along the north side of the river and included the south side as well—the area that later became Surry County. West toward the Chickahominy the area adjacent to Jamestown Island became rather heavily developed and was referred to as the “Suburbs of James City.”

The period from 1619 to 1624 was one of considerable activity for Virginia in general and Jamestown in particular. The reorganized Virginia Company, following its political changes, renewed its efforts to expand the Colony and to stimulate profitable employment. Heavy emphasis was placed on new industries, particularly iron and glass, the latter evidently attempted a second time on Glass House Point. The planting of mulberry trees and the growing of silkworms were advanced by the dispatch of treatises on silk culture and silkworm eggs in a project in which King James I himself had a personal interest. Immigration to the Colony was increased, and measures were taken to meet the religious and educational needs of the settlers. This was the period that saw the attempt to establish a college at Henrico.

The industrial and manufacturing efforts of these years, however, were not destined to succeed. This condition was not due to any laxity on the part of George Sandys, resident Treasurer in Virginia, who was something of an economic on-the-spot supervisor for the Company. Virginia could not yet support these projects profitably, and interest was lacking on the part of the planters who found in tobacco a source of wealth superior to anything else that had been tried. Tobacco was profitable, and it was grown, at times, even in the streets of Jamestown. It was the profit from tobacco that supported the improved living conditions that came throughout the Colony.

These Englishmen who came to settle in the wilderness retained their desire for the advantages of life in England. Books, for example, were highly valued, and with the passage of the years were no uncommon commodity in Virginia. As early as 1608, Rev. Robert Hunt had a library at Jamestown, which was consumed by fire in January of that year. Each new group of colonists seemingly added to the store on hand—Bibles, Books of Common Prayer, other religious works, medical and scientific treatises, legal publications, accounts of gardening, and such. In 1621, the Company wrote to the colonial officials regarding works for a new minister being sent to the Colony that: “As for bookes we doubt not but you wilbe able to supplie him out of the lybraries of so many that have died.” By this date there was local literary effort, too, such as that by Treasurer George Sandys who continued his celebrated translation of Ovid’s *Metamorphoses* in the house of William Pierce at Jamestown. Then, too, in March 1623, a gentleman of the Colony sent from “*James his Towne*” the ballad “Good Newes from Virginia” in which, among other things, he describes the arrival of the governor’s

wife at Jamestown and uses this to prod others to support the Colony and to settle in Virginia.

*But last of all that Lady faire,
that woman worth renoune:
That left her Country and her friends,
to grace braue Iames his towne.*

*The wife unto our Gouvernour,
did safely bere ariue:
With many gallants following her,
whom God preserue aliuie.
What man would stay when Ladies gay,
both liues and fortunes leaues:
To taste what we haue truely sowne,
truth never man deceaues.*

(From *The William and Mary Quarterly*,
3rd Ser., V, 357-8)

"NEW TOWNE." It is in the 1619 to 1624 period that the first clear picture of Jamestown emerges, for this period corresponds with the earliest known property records that exist. The town had outgrown the original fort in some years past and now appeared as a fairly flourishing settlement. The records reveal that many of the property owners were yeomen, merchants, carpenters, hog-raisers, farmers, joiners, shopkeepers, and ordinary "fellows," as well as governors and colonial officials. The "New Towne" section of James City developed in this period as the old section proved too small and the residents began to build more substantial houses, principally frame on brick foundations. The Indian massacre of 1622, that wrought such heavy devastation in the outlying regions of the Colony, did not reach Jamestown which was warned through the efforts of the Indian, Chanco. It did temporarily cause congestion in the Jamestown area, however, as the survivors from the more distant settlements fell back for safety and to regroup. The punitive Indian campaigns that followed were directed from Jamestown by the governor who resided there.

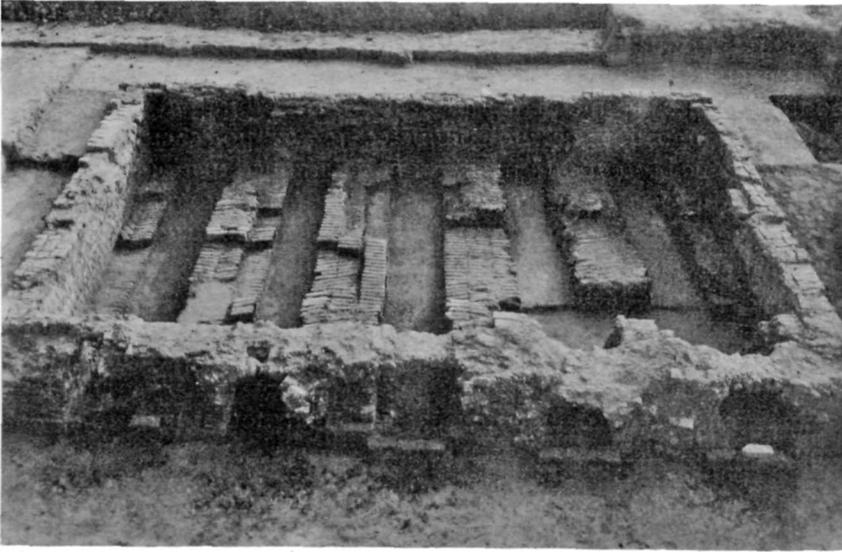

The population figures taken in these years give a good idea of the size of Jamestown in this period. In February 1624, it is recorded that 183 persons were living in Jamestown and 35 others on the Island outside of the town. These are listed by name, as are the 87 who died between April 1623 and the following February. The death toll suggests that the mortality rate was continuing high and that it was still difficult for newcomers to adapt themselves to the Virginia environment. In the

"census" of January 1625, a total of 124 residents are listed for "James City" and an additional 51 for the Island. In the over-all total of 175, 122 were males and 53, females. At that time, Governor Sir Francis Wyatt and former Governor Yearley had two of the largest musters for the town, which included women, children, indentured servants, and Negroes. Nine Negroes were listed for Jamestown and the Island, evidently some of those brought there in 1619.

Aside from the population statistics, the musters of January 1625 give much more information. Jamestown had a church, a court-of-guard (guardhouse), 3 stores, a merchant's store, and 33 houses. Ten of the Colony's 40 boats were here, including a skiff, a "shallop" of 4 tons, and a "barque" of 40 tons. There were stores of fish (24,880 pounds to be exact), corn, peas, and meal. There were four pieces of ordnance, supplies of powder, shot and lead, and, for individual use, "fixt peeces," snaphances, pistols, swords (to the number of 70), coats of mail, quilted coats, and suits of armor (35 of them complete). The bulk of the Colony's livestock seems to have been localized in the Jamestown area—about half (183) of the cattle, a little more than half (265) of the hogs, and well over half (126) of the goats. The one horse listed for the Colony was shown to have been at Jamestown.

The "census" clearly indicates that the population of Jamestown was not keeping pace with that of the Colony. The needs of tobacco culture—open fields and new soil—and the abundance of navigable waters in the rivers, bays, and creeks of tidewater Virginia led to a scattered population, based on the plantation system. These factors prevented the rise of trade centers and large towns for almost a century, despite the best efforts of both home and colonial officials. The idea was to make Jamestown the center of social, political, and economic life and to develop it into a city of some proportions. In size, it never attained that of a city and it failed to dominate trade and commerce. It was, however, the hub of political and social life for as long as it was the capital of Virginia—92 years. Hence, its story is vital to an understanding of American beginnings. Its citizens, in their daily life and work, developed the origins of many of our institutions, styles, and customs in speech, in architecture, in dress, and in government organization.

VIRGINIA MADE A ROYAL COLONY. The Virginia Company established the first permanent English settlement in America, but did not reap the profits that it had expected. Despite reorganization and large expenditures, it never achieved its full objective and was increasingly subject to criticism. Matters reached a head in 1624 when James I dissolved the Company, thereby removing the hand that had guided Virginia affairs for 17 years. With this act Virginia became a royal colony and continued as such until the American Revolution made it free and independent. From the point of view of operations in the Colony the change was

The remains of a seventeenth century (c. 1650) brick and tile kiln found at Jamestown. This is the best preserved and most complete of several kilns that have been uncovered, showing that the Jamestown residents manufactured many of their bricks and roofing tiles.

almost painless although there was concern over land titles and a continuance of the Assembly which had already voiced its feeling on taxation without representation. The Company governor gave way to the royal appointee, but most institutions were left intact.

Sir Francis Wyatt was the last Company governor, and he continued in office for a while as royal governor. When he left for England, in 1626, Yardley again became governor and served until he died at Jamestown the next year. Capt. Francis West was named to the post as deputy. Another deputy, Dr. John Pott, followed next in turn, and he was replaced by the royal appointee, Sir John Harvey.

GOVERNOR HARVEY DEPOSED. Sir John Harvey first came to Virginia in 1624 as a member of a committee to report on conditions in the Colony. It was in 1630 that he returned as royal governor and settled himself at "James cittie, the seate of the Governor." In 1632, he had a commodious house and was complaining of the expense of the entertainment that he had to finance at the seat of government in "the Governors owne house." Whether because of his personal nature, his own view or interpretation of government, or because of the severe opposition that confronted him, he managed to become thoroughly disliked throughout the Colony. His high-handed and autocratic methods arrayed even his Council against him.

In the end, his Council, in meetings at Jamestown, moved to depose him, naming another to act in his stead—a bold measure, indeed. The Assembly, in May 1635, approved this action, and Harvey was returned to England to answer the charges placed against him there. The King, it is true, returned Harvey to his post as royal governor in 1637, but undoubtedly both he and Harvey were impressed by the action that the Colonists had taken to redress their grievances—they had deposed a royal governor.

BRICK ARCHITECTURE. When Governor Harvey reached Jamestown in January 1637 he made a special effort to promote the growth of the town. The Assembly passed an act offering a "portion of land for a house and garden" to every person who would undertake to build on it within 2 years. This was the beginning of considerable activity at Jamestown. A number of new patents were issued, and, in January 1639, the Governor and his Council could report that twelve houses and stores had been constructed and others had been begun. One of those already built was the house of Richard Kemp, Secretary of the Colony. His house was described as "one of brick" and "the fairest ever known in this country for substance and uniformity." Kemp's house is the earliest all-brick house in Virginia that it has been possible to date conclusively up to the present time. It was in 1639, too, that the first brick church was begun, and a levy was collected for the acquisition of a statehouse. Among the new land holders at Jamestown in this period of activity were Capt. Thomas Hill, Rev. Thomas Hampton, and Alexander Stoner, a "brick-maker." As the area along the river was occupied, additional patentees obtained holdings just outside of the town proper and others settled in the few lots that had been abandoned. Sir William Berkeley, who became governor in 1641, continued the emphasis on the construction of substantial houses. In that same year, the Colony acquired its first statehouse, formerly the property of Harvey and a building in which public business had been transacted for, perhaps, as much as 10 years.

In March 1646, measures were taken to discourage the sale of liquors on the Island, and a system of licensed ordinary keepers was adopted. Later in the year, houses for the encouragement of linen manufacture were projected for Jamestown. In 1649, the General Assembly established a market and near the market zone was the landing for the ferry that ran across the James to Surry County. Even this new action, however, failed to develop a town of any great extent. The same was true of the Act of 1662 which attempted to encourage a substantial building program for the capital town. Only a few houses were erected before the new impetus had spent itself, and, in 1676, it is known that the town was still little more than a large village. One of the more detailed descriptions at this time relates that "The Towne . . . [extended] east and west, about 3 quarters of a mile . . . [and] comprehended som 16 or 18

houses, most as is the church built of brick, faire and large; and in them about a dozen families (for all the howses are not inhabited) getting their liveings by keeping of ordnaries, at extreordinary rates.”

THE COMMONWEALTH PERIOD. The decade of 1650–60 corresponded with the period of the Commonwealth Government in England. Virginia, for the most part, appeared loyal to the crown, yet in 1652 the Colony submitted to the new government when it demonstrated its power before Jamestown. Governor Berkeley withdrew to his home at Green Spring, just above Jamestown, and the General Assembly assumed the governing role, acting under the Parliament of England. Virginia was given liberal treatment, with considerable freedom in taxation and matters of government. The governors in this interval, elected by the Assembly, were Richard Bennett, Edward Digges (an active supporter of the production of silk in Virginia), and Samuel Mathews. In 1660, on the death of Mathews, the Assembly recalled Berkeley to the governor's office, an act that was approved by Charles II, who was restored to the English throne in that year. The decade passed quietly for the Colony, although in the years that followed it had occasion to remember the liberal control that it had enjoyed. It had witnessed an increased wave of immigration that brought some of those who were fleeing from England, and this more than offset the loss of the Puritans whom Berkeley had forced out of the Colony prior to 1650.

In matters of religion, Virginia continued loyal to the Church of England, although there was considerable freedom for the individual. The Puritans found it uncomfortable to remain, however, and two Quaker preachers, William Cole and George Wilson, soon found themselves in the prison at Jamestown. Writing “From that dirty dungeon in Jamestown,” in 1662, they described the prison as a place “. . . where we have not the benefit to do what nature requireth, nor so much as air, to blow in at a window, but close made up with brick and lime. . . .” Lord Baltimore (George Calvert) did not find the Colony hospitable when he visited Jamestown with his family in 1629, for, being a Roman Catholic, he could not take the Oath of Allegiance and Supremacy which denied the authority of the Pope.

BACON'S REBELLION, 1676–77. Bacon's Rebellion, one of the most dramatic episodes in the history of the English colonies, stands out as a high light in seventeenth century Virginia. It broke in spectacular fashion and is often hailed as a forerunner of the Revolution. It constituted the only serious civil disturbance experienced by Virginia during its entire life as a British colony. It occupies a prominent spot in the annals of the times, and in any chronicle of Jamestown its significance can be multiplied many times, for a number of its stirring events took place at the

seat of government and resulted in excessive physical destruction in the town.

The rebellion had its origin in Indian frontier difficulties and a royal Governor (Sir William Berkeley) who, possibly as a result of his involvement in the Indian trade, had become somewhat dictatorial, tyrannical, and a firm advocate of the *status quo*. The leader for the exposed frontiersmen and the generally disgruntled Virginians came in the person of Nathaniel Bacon, a young man of good birth, training, and education who had come to Virginia in 1674. A distant kinsman of Lord Chancellor Francis Bacon and a relative of another Nathaniel Bacon, a leading citizen of Virginia, he soon became established as a first-rate planter at Curles, in Henrico County, and was admitted to the Governor's Council not long after his arrival.

The low prices for tobacco, the accumulative effects of the Navigation Acts, high taxes, and autocratic rule by Berkeley, whose loyal supporters permeated the government structure and had not allowed an election of burgesses for 15 years, had brought considerable underlying discontent in Virginia. The spark came from the depredations of the Susquehanna Indians who were being forced south by the powerful Iroquois. They made attacks all along the Virginia frontier. Berkeley ordered a counterattack, but cancelled it in favor of maintaining a system of forts along the edge of the western settlements. In March 1676, the Assembly at Jamestown made plans for new forts; this measure, however, was both time-consuming and ineffective. Among the leaders who assembled at the falls of the James for consultation regarding the Indian menace was Nathaniel Bacon. William Byrd I was there, too, and, even though he was the officer who had been named to guard the frontier, Bacon was placed in command of the men sent to attack the enemy Indians. A messenger left to request a commission for him from the governor. Berkeley replied that he would discuss the matter with his Council. Bacon then set out with his men to collect allies from among the friendly Indians. While Bacon was on the march he received word from Berkeley ordering him to return or be declared a rebel. Bacon did not turn back but continued into the wilderness in search of the enemy. Action came at Occaneechee Island. Bacon returned with captives and was hailed as a hero by those who had heard of his exploits.

Governor Berkeley realized that the situation was becoming critical and that he could lose control of his government. Prompt action was necessary. He dissolved the House of Burgesses and ordered a new election. The result was that many of his loyal adherents were replaced by representatives, some of whom were unfriendly, even hostile, to him. The new Assembly convened in the statehouse at "James Citty" on June 5, 1676, and among the Burgesses was the defiant Bacon who had been returned by the voters of Henrico. An announced rebel and not yet formally removed from the Council, it is doubtful that he was eligible for his seat, yet he determined to go to Jamestown and present his credentials.

He boarded his sloop, accompanied by about 40 supporters, and sailed down the James. When near Jamestown he sent ahead to inquire whether he would be allowed to enter the town in peace. A shot from a cannon in the fort gave the negative answer. Despite this, Bacon secretly went ashore at night to confer with two of his friends then living in Jamestown—William Drummond, a former Governor in Carolina, and Richard Lawrence, a former Oxford student. Later that night he returned to his boat and started back up the James, but was taken by an officer whom Berkeley had sent out to apprehend him. A dramatic scene followed at Jamestown.

Bacon was brought before the Governor, paroled, and restored to the Council. Berkeley knew that his opponent had the upper hand and that the House of Burgesses, then in session, was against him. Bacon seemingly could have remained in the capital and personally directed a full program of economic and political reform. This evidently was not his aim. He demanded a commission to go against the Indians, and, when Berkeley delayed, he disappeared from Jamestown, later saying that his person was in danger, although this appears unlikely. Bacon now entered a course from which he could not turn back. With a sizable group of supporters, on June 23, he returned again to Jamestown. He crossed the isthmus “. . . there leveing a p'ty to secure ye passage, then marched into Towne, . . . [sent] p'tyes to the ferry, River & fort, & . . . [drew] his forces ag't the state house.” In the face of this show of force, the Governor gave him a commission, and the Burgesses passed measures designed to correct many old abuses. Among the new laws was one establishing the bounds of Jamestown to include the entire Island and giving the residents within these bounds the right, for the first time, to make their own local ordinances.

By this time Bacon and his men were arrayed solidly against both governor and royal government. The issue was defeat or independence for Virginia, but Virginia was not yet ready and did not elect to face the issue. Bacon, it seems, wanted extreme measures, and there is evidence to indicate that he visualized the formation of an American Republic. Yet when Bacon established himself as the opponent of royal government in Virginia and subordinated his role as supporter of the frontier settlers against misrule, he lost popular support. Had he lived and succeeded in arms, it is questionable that the people would have backed him, for they had not shown much disposition to defy royal authority. The discontent at this time was not so much against that authority as against the misuse of it by Sir William Berkeley.

The issues having been drawn, Bacon pursued his course to the bitter end. He returned to Henrico. When about to move a second time against the Indians, news came that Berkeley was attempting to raise troops in Gloucester County. Consequently, it was to Gloucester that Bacon first moved, only to find that his opponent had withdrawn to Accomac, on

with many of his supporters. This was the high point of Bacon's fortune in arms, and a costly one. Seemingly, it was during the fatiguing siege, which came "in a wett Season," that he contracted the illness that caused his death and brought an abrupt end to the rebellion.

Following Berkeley's withdrawal, Bacon and his tired force marched into Jamestown for rest. Wholesale destruction followed. As a contemporary put it, "Here resting a few daies they concerted the burning of the town, wherein Mr. Laurence [Richard Lawrence] and Mr. [William] Drummond owning the two best houses save one, set fire each to his own house, which example the souldiers following laid the whole town (with church and State house) in ashes. . . ." It is known from the records that the destruction was systematic and that the town suffered heavily from the burning. Among those losing homes and possessions of high value were Col. Thomas Swann, Maj. Theophilus Hone "high sheriff of Jamestown," William Sherwood, and Mr. James' "orphan," the last to the value of £1,000 sterling. It was estimated that total losses reached a value of 1,500,000 pounds of tobacco. Again the idea was advanced to move the seat of government from Jamestown to some more desirable location. A little later, Tindall's (now Gloucester) Point, on the York, was given preferential consideration by the Assembly as a fit location. The move was not made, however, and the capital remained at Jamestown for another quarter of a century.

From Jamestown, Berkeley moved once more to the Eastern Shore. Bacon, whose men pillaged Green Spring (Berkeley's home on the mainland, just above Jamestown) on the way, marched to Gloucester, where he became ill and died on October 26, 1676. The rebellion, now without a real leader, quickly collapsed. Joseph Ingram, successor to Bacon, and Gregory Wakelett, cavalry leader in Gloucester County, surrendered in January 1677; Lawrence disappeared in the Chickahominy marshes; and Drummond was promptly hanged. Berkeley moved with haste to silence his opponents, making ready use of the death sentence.

Accommodations for the conduct of government were now wholly inadequate at Jamestown. Consequently, Berkeley called the Assembly to meet at Green Spring, which functioned for a time almost as the temporary capital. In February 1677, the commissioners sent to investigate Bacon's Rebellion arrived in Virginia. With them came about 1,000 troops who encamped at Jamestown for the remainder of the winter and ensuing spring. The commissioners, among them Col. Herbert Jeffreys, the next governor, finding so much ruin and desolation at Jamestown, made their headquarters in the home of Col. Thomas Swann across the James from the capital town. Berkeley left for England in May, and Jeffreys took control in Virginia. It was not until March 1679, however, that definite action (following a recommendation of the investigating commissioners) was taken for the restoration of Jamestown. Then it was ordered, in England, that the town be rebuilt and made the metropolis of Virginia "as the most ancient and convenient place."

A section from the "Plan du Terrain a la Rive Gauche de la Riviere de James vis-a-vis James-Town en Virginie . . ." done by Colonel Desandrouins, of the French Army, in 1781.

JAMESTOWN REBUILT. Lord Culpeper reached Virginia in May 1680, with instructions to rebuild Jamestown and to develop it into an urban center. In 1683, he was able to report that he had given all possible encouragement to this enterprise and that, although he himself was living at Green Spring, considerable activity had begun. He mentioned specifically that Nathaniel Bacon (the kinsman of the rebel), Joseph Bridger, and William Sherwood had substantial work under way. A little later the fourth statehouse was completed, as was the church. By 1697 the town had been rebuilt and boasted of a statehouse, country house, church, fort, powder magazine, and 20 or 30 houses. In this period William Sherwood, for a time attorney general for the Colony, was a major landholder on the Island and in the town. Others included Robert Beverley, author of one of the early histories of Virginia; William Edwards, clerk of the Council; Henry Hartwell; and John Page. It was in 1686 that John Clayton, minister at Jamestown, offered proposals for draining the marshes nearby to improve the healthfulness of the spot, a project that never materialized.

STATEHOUSE BURNED AND CAPITAL MOVED. On October 31, 1698, a fire consumed the statehouse, prison, and probably other buildings at Jamestown, although the records and papers were saved. This fire led to the removal of the seat of government to Middle Plantation (Williams-

The Gatehouse and entrance to the grounds of the Association for the Preservation of Virginia Antiquities at Jamestown which embrace the west end of the town site.

burg)—a spot favored by the then governor, Sir Francis Nicholson. Thus, Jamestown was abandoned as the seat of government after 92 years. Its mission had been accomplished, and it had seen Virginia grow from the small settlement of 1607 into a Colony of great extent, with a population of perhaps 80,000.

LATER YEARS AT JAMESTOWN. The removal of the capital ultimately proved the death blow for Jamestown, for this eliminated the primary reason for its existence. Decline set in immediately, but Jamestown retained a seat in the Assembly for another three-quarters of a century. Its end as a town, legally and physically, may be given as the period of the American Revolution. There was a military post here early in that struggle. Later, it became a point of exchange for American and British prisoners of war, and it featured in the maneuvers leading to the Siege of Yorktown. It witnessed the movement of Cornwallis' army across the James and was a landing and resting point for American and French soldiers being sent to join Washington's allied army.

Even before 1700, property on Jamestown Island was being consolidated into a few hands. The consolidation continued unabated after this date, and before the middle of the eighteenth century the major part of the Island was in the hands of two families—Ambler and Travis—each of which had and occupied its own "mansion." The Travis

A water color by Robert M. Sully showing the shore line at Jamestown in 1854 at a point just above the Old Church Tower. In this period erosion was slowly destroying the west end of the site of "Old James Towne." (Original in the collection of the late Miss Julia Sully, Richmond, Va.)

family estate at Jamestown had grown slowly since before 1650, and Richard Ambler, of Yorktown, acquired, through marriage, the extensive Jaquelin, formerly Sherwood, holdings. After 1830, the Island came under a single ownership. Under the Amblers and Travises and later owners of the Island, even parts of the town site itself became farm land and functioned as an integral part of the plantation system which earlier events at Jamestown had helped so materially to create.

The fields, and woods, and marshes lay quietly on the James for generations, contributing in a small, but important, manner to a growing country. Americans often remembered the early years of the Colony and the momentous events that had taken place on the Island, and joined here to commemorate the deeds of their forefathers. There was the Bicentennial of 1807, the Virginiad of 1822, the 250th anniversary in 1857, and the Tercentennial of 1907. In the years between these events there were thousands who came individually and in small groups, the famous and those now unknown. It was this remembrance and loyalty to one of its great landmarks that led to the establishment of Jamestown Island as a national historic shrine.

Colonial National Historical Park

Jamestown Island is within the boundaries of Colonial National Historical Park, which also includes the Yorktown Battlefield, the Colonial

Parkway, and the Cape Henry Memorial. The park was first established as Colonial National Monument by Presidential proclamation in 1930 and given its present designation by act of Congress in 1936.

Jamestown Island embraces 1,559.5 acres which are about evenly divided between marsh and dry land. In 1934 the United States acquired the area now in Federal ownership.

Jamestown National Historic Site

(Grounds of the Association for the Preservation of Virginia Antiquities)

Public attention was drawn to the preservation and protection of the Jamestown area in 1893 when Mr. and Mrs. Edward E. Barney, the then owners of Jamestown Island, presented a tract of 22.5 acres, embracing the Old Church Tower, the graveyard, and the west end of the town site to the Association for the Preservation of Virginia Antiquities. The Association, better known perhaps as the APVA, is a nonprofit organization interested in the acquisition, restoration, and preservation of "ancient historic grounds, buildings, monuments, and tombs in the Commonwealth of Virginia" and in the collection and care of relics associated with them or with the history of the State. Its Jamestown grounds is one of a number of holdings which it administers. Another is the seventeenth century Warren House on the Rolfe property in Surry County, just across the James River from Jamestown.

A workroom in the Jamestown Archeological Laboratory. Visitors can look into these rooms as well as into the storage rooms from the corridor in the rear section of the building.

As the custodian of a significant part of the site of old "James Towne," the Association has been continuously active in promoting measures to insure the protection of the site and to make it available for visitor use and inspiration. Landscaping, limited reconstruction, some restoration, and the stabilization of the remains of the Old Church Tower, the tombs, and foundations have been a part of its program, as well as have the acquisition and display of Jamestown relics.

The Association was successful in its efforts to encourage the United States Government to construct the sea wall which was built by Col.

Visitors being shown the "dig" when work was under way near the Henry Hartwell house site. The brick in the foreground proved to be the remains of a walk.

Samuel H. Yonge¹ in 1900–01 to halt the erosive action of the James River. In 1907, it made available the grounds on which the Jamestown Tercentenary Monument was erected. In 1940, the Association for the Preservation of Virginia Antiquities entered into agreement with the United States of America, through the Secretary of the Interior, to provide a unified program of development and administration for the whole of the Island, and the Association grounds were designated Jamestown National Historic Site. The joint cooperative agreement continues in force, and the Association and the Service are working together to preserve, maintain, and develop this national shrine.

The Jamestown Archeological Project

When the major portion of Jamestown Island, including much of the town site was placed in its custody in 1934, the National Park Service assumed the responsibility for the preservation of the historic remains on the Island and for interpreting the site to the public. This posed many problems, for the Jamestown story is a vital segment of our national history involving the origins and growth of the culture of this formative period of English colonization. The first pressing concern was the accumulation of data and the obtaining of a more complete understanding of life and conditions as they existed at that time, specifically at Jamestown, upon which to base a plan for the preservation, development, and interpretation of this area.

An idea evolved and then took form as an organization which combined the various types of research that the conditions and problems at

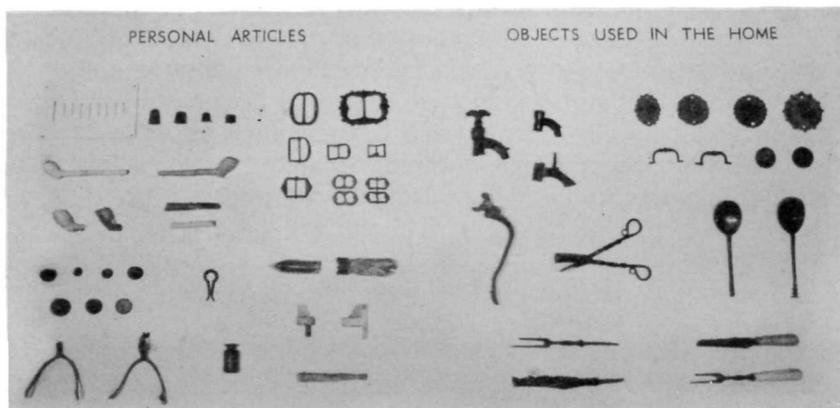

¹ Colonel Yonge became a serious student of Jamestown history and wrote *The Site of Old "James Towne", 1607–1698*, a work still available through purchase from the Association.

Jamestown required. This was broadly labeled the Jamestown Archeological Project and was initially set up in cooperation with representatives of the Smithsonian Institution. Its over-all objective is to secure and preserve all possible data on Jamestown history, with history given its broadest interpretation, and to gain a well-rounded picture of social and technological growth over the period during which Jamestown was inhabited.

When the project got under way, trained historians began work in the leading libraries of the country. At Jamestown, engineers and archeologists, assisted by historians, architects, and museum technicians, began a survey of the Island itself. Little of the old town existed above ground, yet it was known that there were, in all probability, extensive remains underground. Systematic excavations were begun on the town site on July 11, 1934.

In the beginning, it was recognized that the project would be of long duration, and even now it is expected that the work will continue for many years. Only a part of the town site area has been excavated, and

A representative group of personal and household objects.

Seventeenth century bottle types.

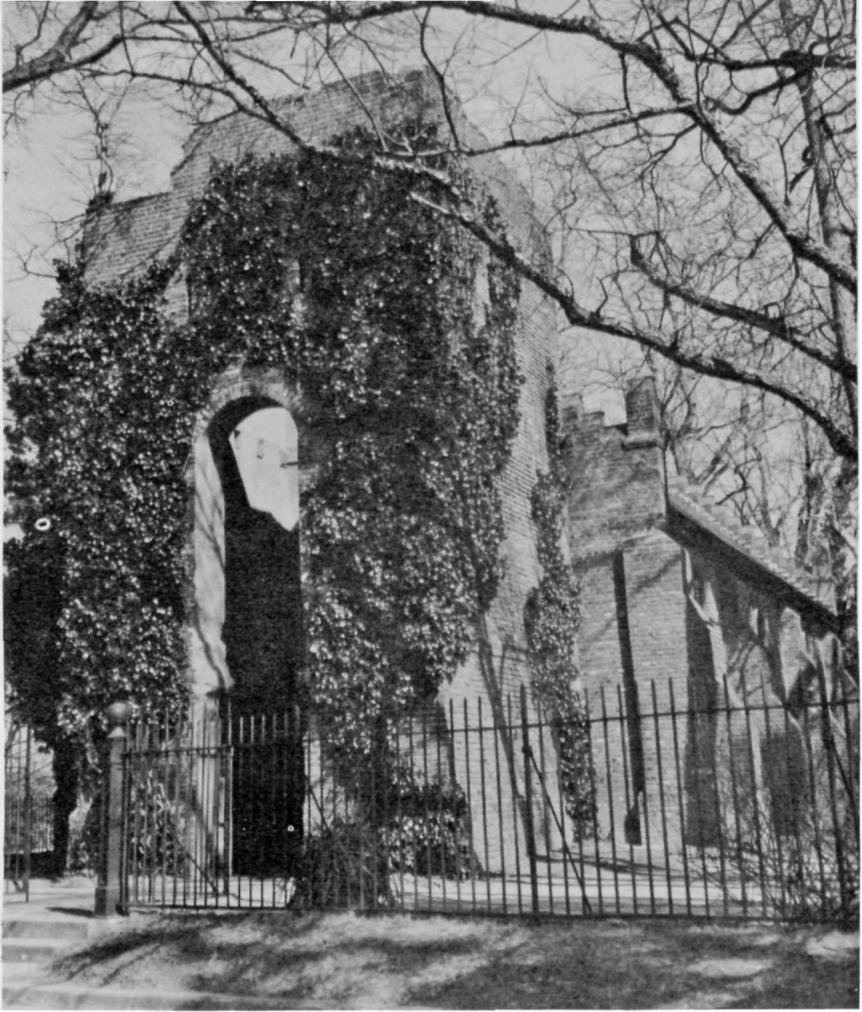

Sgraffito—often called "scratch" ware since the design was scratched into the upper layer of pliable clay before it was baked—is one of the most common seventeenth century ceramic types found at Jamestown.

some of the most significant spots have not yet been thoroughly studied or dug. The present rate of progress is considerably reduced from that achieved when extensive activity was made possible through the support of the Emergency Conservation Work (ECW) and the Civilian Conservation Corps (CCC) programs in the years prior to World War II. The last field excavation prior to the War was done within the APVA Grounds in 1940, and the first postwar work was done at Glass House Point in 1948.

On June 1, 1938, a field laboratory and storage building to house the Jamestown activities was completed, giving the project a physical plant comparable with the field headquarters of similar projects in other parts of the country. This is the large, white, modernistically designed structure standing at Jamestown—a temporary building planned to satisfy the needs of fireproof construction, space, simplicity, and economy. It will be removed when the full development of the town site has been achieved. The building houses thousands of cultural objects and includes facilities for cleaning, sorting, restoring, and cataloguing. Each operation in the work is done in a systematic, orderly, and approved manner as outlined in a special *Field and Laboratory Guide* which was compiled as a part of the project.

The Jamestown research activities may be properly classified as belonging to the relatively new and highly specialized field of historical archeology. In fact, the Jamestown work has done much to advance this new line of approach into the field where history and archeology merge.

The findings of the Jamestown Archeological Project have been extensive. Documentary study has gleaned data which, when carefully

The Old Church Tower, standing in the grounds of the Association for the Preservation of Virginia Antiquities, was probably built about 1639. It is the only standing ruin of seventeenth century Jamestown.

examined in detail, yield a more complete picture of Jamestown and life there in the seventeenth century than was thought possible. However, it is still a sketchy picture, lacking much of the body that is needed. For this reason research goes on in anticipation of bridging the gaps. Archeological work has been more fruitful than the most optimistic anticipated in the initial phases of the work. The material and information found beneath the ground at Jamestown have been, and continue to be, astonishing in both quantity and type.

Architectural and construction features include various types. More than 50 building remains have come to light. Sometimes there are only the footings for a frame structure, then again there are brick foundations in full outline, and sometimes there are well-preserved cellars with interesting structural detail. Associated with the sites are quantities of

fragments of hardware, glass, roofing tile, and related building materials. Some of the building remains are those of the most prominent structures at Jamestown, such as statehouses and governors' houses. Brick kilns have been found, one being the well-preserved ruins in the Association grounds, showing clearly that seventeenth century Virginians made much of their own brick and roofing tile. Several types of early wells, often brick lined, have yielded many objects—objects deposited in the bottom accidentally, or by design, while it still served as a source of drinking water. Even road traces still exist in the ground. Some of these traces, considered in the light of documentary references, have made it possible to reestablish the route of the "Great Road" formerly connecting the Island and the mainland. The reopening of old property line ditches and the rediscovery of fence lines (by identifying old post holes) have aided immeasurably in locating property tracts. This information, added to that in the old land grants and survey plats, has made possible the precise location of many early landholdings and consequently helped in the study of the physical layout of the town. Other features uncovered include lime kilns, where the early Jamestown builders burned their own lime for plaster—occasionally found still clinging to basement walls—and brick drains used to carry off surplus water.

The number and variety of objects found in the excavating can only be indicated in general terms. The great bulk of the thousands of items now in the collection is made up of pieces of iron, copper, brass, bronze, pewter, clay, and earth. Occasionally some more perishable material, such as wool, leather, and wood, is found. Among the more interesting categories are clay tobacco pipes, glass wine bottles, pottery vessels, Delft tiles, gun and sword fragments, bullets, cannon balls, spurs, stirrups and bridles, locks, keys, nails, spoons, forks, shears, pins, thimbles, axes, hoes, window glass, buckles, combs, and rings. A complete list would be much longer. Often only fragments remain, yet in many cases it is possible to make a full restoration of the original piece, such as has been done with the clay baking oven now on display in the Exhibit Rooms. Individually and collectively these objects give us an insight into the manner in which the seventeenth century Jamestown men and families lived. Because of them, visitors to Jamestown will get a more complete picture of their early forbears—how they dressed, how they worked, how they built their houses, how they equipped their homes, and how they satisfied their daily needs.

Development for Jamestown

No attempt will be made to restore Jamestown as it was in 1607 or at any other period. The town was always small and always changing. The Jamestown of 1607, or 1610, was unlike that of 1623, and that of 1623

The graveyard near the Memorial Church. The sycamore (center) now separates the graves of Rev. James Blair, a founder of William and Mary College, from that of his wife, Sarah Harrison.

was far different from that of 1675. Architecture went all the way from timber and thatch structures to substantial all-brick houses. Even the streets changed, and several houses occupied the same site as those which were first built and later were burned, fell into ruin, or were removed. Even if the town had had a reasonable continuity of building types and plan, known information would be entirely insufficient to allow a restoration. Major discoveries of new material are still expected, yet the detail necessary for an authentic restoration may always be too meager.

The site of old "James Towne" has, however, retained much of the spirit of its antiquity. Its serene and peaceful atmosphere seems to take one back through the years. Many visitors have been able, for a moment, to disassociate themselves from the swift pace of present living as they wander past the old foundations and look upon the old Church Tower. It is the plan of the National Park Service to endeavor to preserve and to advance this feeling of oldness, this unbroken link with the spirit of the past, and thus place emphasis on the presentation of the town site itself as the real exhibit. It will be done through exposed foundations, existing remains, trailside exhibits, winding paths, shaded vistas, and secluded points for quiet reflection.

Physical features of the seventeenth century have not survived at Jamestown in sufficient number to illustrate the complete story, and the town site will not adapt itself to a full coverage. For this reason there will be a museum group near the town site, which will perhaps be a rather extensive development. It will house exhibits and will accommodate the sizeable collection of genuine Jamestown objects recovered

through the Jamestown Archeological Project and those otherwise acquired.

Guide to the Area

(Numbers in the guide correspond to numbers on the map of Jamestown. See map pages 24 and 25.)

The town of Jamestown developed on the west end of Jamestown Island, near the site of the first landing. At its maximum extent it was approximately three-fourths of a mile long and lay along the river. It was a thin strip of a town between the James River and the marsh that came to be called Pitch and Tar Swamp. At first there was only the fort, then an enlarged palisaded area, and then a town. As the town expanded there were houses, a church, a market place, shops, storehouses, forts, statehouses, and other public buildings grouped along streets and paths. The entire town site is an exhibit area.

The *first landing site* (1), which the colonists reached on May 13, 1607, and where, the next day, they landed supplies, has been fixed by tradition as a point now in the river approximately 125 feet from the present sea wall, almost directly out from the front of the Old Church Tower. The *first fort* (1) built near the landing site, according to tradition, was located in front of the Tower and likewise on land that has been washed away by the James River. Other possible locations for the

The foundations of the Last (fourth) Statehouse Group as it extends toward the James River. It was the burning of this Statehouse in 1698 that was the immediate reason for moving the capital of the Colony from Jamestown to Williamsburg.

One of the larger of the Jamestown foundations, located in the "New Towne" section. It has been identified as the "Country House" (Governor's house). As the foundations indicate, several houses occupied this site.

The foundation ruins of the First Statehouse at Jamestown, where the House of Burgesses met in the period 1640-55. Believed to have been used earlier by Sir John Harvey.

landing and fort have been suggested, but only the traditional sites are mentioned here.

In the words of William Strachey, Recorder for the Colony, the fort, as built in 1607 and standing in 1610, was "cast almost into the forme of a Triangle, and so Pallizadoed. The South side next the River . . . by reason the advantage of the ground doth so require, contains one hundred and forty yards: the West and East sides a hundred onely. At every Angle or corner, where the lines meete, a Bulwarke or Watch-tower is raised, and in each Bulwarke a peece of Ordnance or two well mounted. To every side, a proportioned distance from the Pallisado, is a setled streete of houses, that run along, so as each line of the Angle hath his streete. In the middest is a market place, a Store house, and a Corps du guard, as likewise a pretty Chappel . . . [all] inclosed . . . round with a Pallizado of Planckes and strong Posts, foure foote deepe in the ground, of yong Oakes, Walnuts, &c . . . the principall Gate from the Towne, through the Pallizado, opens to the River . . . at each Bulwarke there is a Gate likewise to goe forth, and at every Gate a Demi-Culverin and so in the Market Place . . .".

The *Church Area* (2) is the most inspiring spot at Jamestown today. It embraces the Old Tower, the memorial church, and the churchyard. The ivy-covered *Old Church Tower* within the Association grounds, is the only standing ruin of the seventeenth century town. It is believed

The Tercentenary Monument erected by the United States in 1907 to commemorate the 300th anniversary of the landing of the first permanent English settlers at Jamestown.

The Hunt Memorial, erected to the memory of Rev. Robert Hunt, first minister at Jamestown, by the Colonial Dames of America in the State of Virginia.

to have been a part of the first brick church, built at Jamestown about 1639. Its walls, 3 feet thick, of hand-made brick laid in English bond, have been standing for more than 300 years. The *Memorial Church*, directly behind the Tower, was erected in 1907 by the Colonial Dames of America over the foundations of the early brick church. Within the church are memorials and burials, including the "Knight's" tomb and that of Rev. John Clough. Of particular note, inside the church, are the

exposed *cobblestone foundations of an earlier church* said to have housed the first representative legislative assembly in America which convened at Jamestown on July 30, 1619. In the *Churchyard* countless dead are buried, and the few remaining gravestones are a witness to the antiquity of the spot. These carry the names of Berkeley, Blair, Harrison, Ludwell, Beverley, Lee, Sherwood, and others. Even the extent of the burial ground is unknown. It is more extensive than either the iron grill fence or the old brick wall (built of bricks from one of the seventeenth century Jamestown churches) suggests.

Above the Church area, still within the Association grounds, is a group of excavated foundations of buildings that served the Colony in the last years of the seventeenth century. It was the accidental burning of these structures that was the immediate reason for moving the seat of government from Jamestown in 1699. This group—the *Last Statehouse Group* (3)—consisted of the last Country (Governor's) House, three houses of Philip Ludwell, and the last (fourth) statehouse at Jamestown. The third statehouse stood on the same site as the fourth, and it was the third that witnessed the stirring events associated with Bacon's Rebellion.

The *lone cypress tree* (4), standing several hundred feet from the shore, can be seen from the river end of the Last Statehouse Group. This tree once stood on the Island and is visible evidence of the erosion that has taken at least 25 acres of the western portion of the town site. The concrete sea wall along the Association shore line (built in 1900–01) and the later riprap extension of it now protect the site from further erosion.

The east end of Jamestown is that area developed after 1619, first actually surveyed by William Claiborne in 1623, and the section which was known to its first residents as *New Towne* (5). This is accessible from the Exhibit Rooms over walks that follow the paths and the streets of the old city, particularly the "Back-Streete" and the "high way close to the river." Using old landmarks and general historical and archeological study it has been possible to locate and plot with reasonable accuracy a number of the holdings in this part of Jamestown. There is the plot taken up by Capt. John Harvey in 1624, on which he had houses and where he kept a garden and cultivated fruit trees. Across "Back-Streete" from Harvey was the holding of Dr. John Pott who was sent from England in 1621 accompanied by two surgeons and a chest of medicine. He had a house here by 1622, although it was not until after this date that he obtained his patent. West of Harvey was the home and lot of George Menefie, an attorney, administrator, and member of the Council. Near Menefie was the tract of Ralph Hamor, Dale's Secretary of State, who died in 1626. Farther west were the holdings of John Chew, a merchant (1624), and of Richard Stephens (1623), who had personal difficulties with John Harvey, and who later appears to have been a party to the first duel fought in an English colony. North of the "Back-Streete" and west of Pott's holdings were those of Edward

The ruins of the Jaquelin-Ambler House which was the residence of the Ambler family at Jamestown in the eighteenth and early nineteenth centuries.

Blaney, a merchant, Capt. Roger Smith, and Capt. William Pierce, whose house George Sandys pronounced "the fairest in Virginia."

The *Country House* (6) in this early period lay in the "New Towne" section, and this is where Governors Argall, Yeardley, Wyatt, and their successors lived. Perhaps a number of houses stood here prior to the first brick structure that bears this designation. In excavations on the site the foundations of the brick building were found, including excellent specimens of ornamental plaster which may have adorned this structure or that of a later private residence of William Sherwood, found to have occupied the same site.

Even the designation "New Towne" was forgotten in the years after 1650 when the area, including street alignment, changed considerably. Those living in houses here or owning property in Jamestown's east end then included Sherwood, Thomas Rabley, James Alsop, Richard Holder, William Edwards, and Henry Hartwell, one of the founders of the College of William and Mary. Extensive archeological study made it possible to locate and to identify the scanty remains of *Hartwell's frame house* (7). In this instance the discovery of a preponderance of "H-H" initialed wine bottle seals furnished a good identity clue.

Near the river, still in the "New Towne" section, stood the *First Statehouse* (8) in Virginia. Its foundations, too, have been uncovered, together with many architectural fragments and informative objects of the period of the house. This building served the Colony from 1641 to 1656. In it, during the early governorship of Sir William Berkeley, were discussed the measures needful for the government of the growing Colony. Here, too, the Colony submitted to the government of the Commonwealth of England in 1652, and Richard Bennett, chosen by the Assembly, succeeded Berkeley as governor.

In the center of the town site, just back from the river, rises the *Tercentenary Monument* (9) erected by the United States in 1907 to commemorate the 300th anniversary of the first settlement. Built of

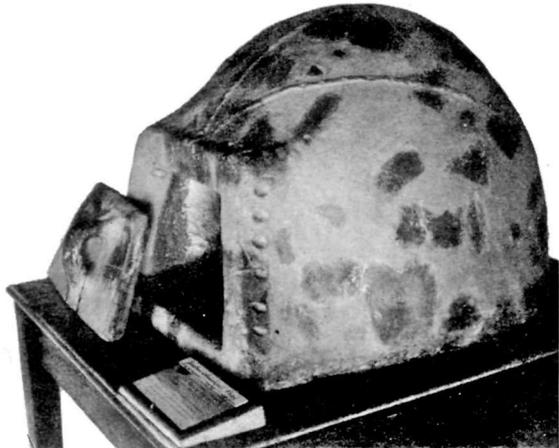

New Hampshire granite, it rises 103 feet above its base. Other monuments and memorials, all of which are in the Association grounds and near the Church, include the *Captain John Smith Statute* (10), designed by William Couper; the *Pocahontas Monument* (10), by William Ordway Partridge; the *House of Burgesses Monument* (10), listing the members of the first representative legislative body in the New World; and the *Memorial to Rev. Robert Hunt* (11), who in June 1607, on the third Sunday after Trinity, celebrated the first Holy Communion at Jamestown.

The ruined walls of the *Jaquelin-Ambler House* (12) stands as a testimony of the late colonial period (eighteenth century) when Jamestown Island was no longer the seat of government and when, as the town declined, the Island became the private estate of two families—Ambler and Travis. The present walls of the Jaquelin-Ambler House constitute the center portion of a rather impressive residence that was flanked by two wings. It was begun about 1710 and when fully established had formal gardens, the brick walks of which have been partly uncovered during archeological work on the town site. A reminder, too, of a later period is the *Confederate Fort* (13) near the Old Church Tower, built by order of Gen. Robert E. Lee in 1861. This is one of several such fortifications on the Island.

In the National Park Service *Exhibit Rooms* (14), in the front section of the archeological laboratory, are illustrated panels giving the history of Jamestown in brief outline and displays of objects which have been recovered from the ground and which were used by early Jamestown residents. From the corridor in the rear of the building it is possible to see many additional fragments and restored objects. Other museum displays are in the Association *Relic House* (15), a combined exhibit room, souvenir shop, and rest house. Among the objects shown here, including the Pocahontas earrings, are some that were recovered in excavations at the Church, in the Churchyard, and around the Last Statehouse Group foundations.

Outside of the town site to the east and south extends the bulk of *Jamestown Island* (16). At present this is undeveloped and generally not accessible to visitors. No structures survive above ground, except scattered tombs in the *Travis Graveyard*, in the center of the Island, but the whole Island is historic ground.

An early baking oven of clay reconstructed from fragments found in the excavations at Jamestown. It is on display in the Exhibit Rooms.

About Your Visit

The town site of Jamestown is open daily, including Sunday. One admission charge of 35 cents, including Federal tax, gives access to both the National Park Service area and the Grounds of the Association for the Preservation of Virginia Antiquities. Both are approached from the central parking area. Literature and information are available without charge in the Service Exhibit Rooms and at the Association Gate House, where tickets are on sale. An attendant is also on duty at the Relic House. All children under 12 years of age and groups of school students 12 to 18 years of age are admitted without charge when accompanied by adults assuming responsibility for their safety and orderly conduct. Guide service is not normally available; however, educational groups are given special service if advance arrangements are made with the Superintendent, Colonial National Historical Park, Yorktown, Va. There are no eating or lodging facilities at Jamestown.

How To Reach Jamestown

Jamestown Island is easily accessible from Williamsburg over Virginia Highway 31 and from Richmond by Virginia Highway 5. The approach from the south is over Virginia Highways 10 and 31 to the ferry across the James at Scotland. The ferry docks at the Island. Sightseeing tour buses operate from Williamsburg, the nearest rail and bus terminal.

The Colonial Parkway, now connecting Yorktown and Williamsburg, will be completed to Jamestown by 1957.

Administration

Jamestown Island, except Jamestown National Historic Site, is included in the National Park System, owned by the people of the United States and administered for them by the National Park Service of the Department of the Interior. Jamestown National Historic Site, constituting the grounds of the Association for the Preservation of Virginia Antiquities, is administered by the Association. A cooperative agreement between the Association and the Department of the Interior has been in effect since 1940 providing for a unified program of development for the whole of Jamestown Island.

Communications and inquiries relating to the National Park Service area should be addressed to the Superintendent, Colonial National Historical Park, Yorktown, Va.

Communications and inquiries relating to the Association for the Preservation of Virginia Antiquities area should be addressed to the Association at Jamestown, Va.
