

**National Interagency Coordination Center  
Incident Management Situation Report  
Thursday, September 28, 2006 - 0530 MDT  
National Preparedness Level 3**

**National Fire Activity**

Initial attack activity: Light (39 new fires)  
 New large fires: 0 (\*)  
 Large fires contained: 0  
 Uncontained large fires: 11  
 Area Command Teams: 1  
 Type 1 IMTs committed: 4  
 Type 2 IMTs committed: 3  
 Fire Use Teams:

\*\* Uncontained large fires do not include WFU or confine/contain incidents. \*\*

Australia and New Zealand assisting with 24 fire specialists and managers.

**Southern California Area (PL 4)**

New fires: 3  
 New large fires: 0  
 Uncontained large fires: 1  
 Area Command Teams: 1  
 Type 1 IMTs committed 2

Area Command Team (Waterbury) assigned to manage the Day fire.

**Day**, Los Padres NF. IMT 1 (Custer, Dietrich). Twenty-two miles northwest of Santa Clarita, CA. Chaparral and timber. Short crown runs, spotting and backing fire. Structures, power and gas lines, communication and archeological sites threatened. Structure protection in place. Evacuations and road closures in effect.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD	ORIGIN OWN
Day	CA	LPF	159,281	41	UNK	4,290	100	266	31	18	53.1M	FS
King - WFU	CA	YNP	151	0	UNK	NR	2	0	0	0	92K	NPS

**Northern California Area (PL 4)**

New fires: 6  
 New large fires: 0  
 Uncontained large fires: 3  
 Type 1 IMTs committed: 2  
 Type 2 IMTs committed: 1

**Bar Complex** (four fires), Shasta-Trinity NF. IMT 1 (Molumby) and IMT 2 (Johnson). Fourteen miles northwest of Weaverville, CA. Timber and brush. Crowning and spotting. Structures and power lines threatened. Structure protection and road closures in place.

**Uncles Complex** (three fires), Klamath NF. Eighteen miles northeast of Orleans, CA. Old growth timber and brush. Active fire behavior. Historic structures and cultural resources threatened.

**Noble**, Mendocino Unit, CDF. CDF IMT 1 (Lutts). Eight miles east of Piercy, CA. Timber. Creeping and isolated torching. Watershed threatened.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD	ORIGIN OWN
Bar Complex	CA	SHF	88,896	33	10/15	961	25	14	10	0	50.9M	FS

**Northwest Area (PL 3)**

New fires: 4  
 New large fires: 0  
 Uncontained large fires: 5  
 Type 2 IMTs committed: 1

**Tripod Complex**, Okanogan-Wenatchee NF. IMT 2 (Gormley). IMT also managing the Tatoosh Complex and Van Peak fires. Seven miles northeast of Winthrop, WA. Mixed conifer. Isolated torching with creeping. Historical and cultural sites. Area-wide closure in effect.

**Tatoosh Complex**, Okanogan-Wenatchee NF. Twenty-four miles northwest of Mazama, WA. Timber. Creeping and isolated torching. Monitoring by air. Area-wide closure in effect.

**Van Peak**, Okanogan-Wenatchee NF. Thirty-one miles north of Winthrop, WA. Timber and dead and down fuels. Creeping and isolated torching. Monitoring by air. Area-wide closure in effect.

**Columbia Complex**, Umatilla NF. Fifteen miles northeast of Walla Walla, WA. Grass, brush and timber. Smoldering. Road and trail closures in effect.

**Cedar Creek**, Okanogan-Wenatchee NF. Eight miles southwest of Mazama, WA. Timber. Minimal fire behavior. Monitoring by air

**Eastern Great Basin Area (PL 2)**

New fires: 2  
 New large fires: 0  
 Uncontained large fires: 1

**Red Mountain**, Boise NF. Sixteen miles northeast of Lowman, ID. Subalpine fir and lodgepole pine. Confine and contain. Isolated interior torching, creeping and smoldering.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD	ORIGIN OWN
Red Mountain	ID	BOF	35,482	90	10/1	28	1	1	0	0	NR	FS

**Predictive Services Discussion**

**Warm, dry weather will persist in California through Friday.** High pressure over the West will continue to bring warm, dry weather with light winds over the next few days. A low pressure trough will move into the Northwest over the weekend and this will bring cooler weather to California along with higher humidity. Dry weather is expected for northern Florida for the next several days.

### **Liquefied Propane Gas (LPG) Tank Hazards**

Liquefied Propane Gas (LPG) tanks are commonly found in the wildland-urban interface and present hazards to firefighters in that environment. LPG tanks may be found in a number of other environments such as motor homes, travel trailers, grills, campstoves, lanterns, etc. Directly attacking LPG tank fires is a structural fire task involving hazardous materials and should only be attempted by trained personnel using full structural personal protective equipment and equipped with a volume of water adequate to safely attack the fire.

#### ● Boiling Liquid Expanding Vapor Explosions (BLEVE)

- The most recognized hazard with LPG tanks is BLEVE (Boiling Liquid Expanding Vapor Explosions) or sudden complete failure of the tank. Some training courses have directed responders to approach the tank from the sides, believing that the force of the explosion will occur on the ends of the tank. However, this is not a guarantee that you will be safe from projectiles or missiles from the explosion, as they may travel in ALL directions up to 2,500 feet away. Leave the area immediately if you smell propane, hear a rising sound from venting safety devices or see discoloration or deformation of the tank. If you leave the area, get at least 2,500 feet away and do not go down wind or down slope of the leaking propane. BLEVEs are a major hazard to emergency responders!

#### ● Fuel Reduction Around Tanks

- Wildland firefighters may take action to prevent direct flame impingement on LPG tanks by removing wildland fuels in the area. However, be aware that lines from the tank to structures may be above or below ground, and may be cut by tools or equipment. Propane gas is heavier than air, and may move along the ground at some distance, and may ignited when in reaches open flame or another ignition source. Use extreme caution when doing fuels reduction around tanks, and flag any lines you encounter.

#### ● Other Wildland Fire Considerations

- Do not position engines or other apparatus near LPG tanks or down wind / down slope from tanks.
- Do not deploy fire shelters near LPG tanks or down wind / down slope from tanks.

#### ● Cooling Tanks

- In light fuels such as grasses, where any heat exposure to the tank will be very limited, rapid application of cooling water on the outside of the tank above the liquid level can reduce the likelihood of container failure by lowering the external temperature of the shell of the exposed tank. Water should not be directed at the valve safety devices, due to the potential of "icing" the valve closed.
- In heavy fuels where long duration heat exposure to the LPG tank is likely, evacuate all personnel and equipment 2,500 feet away and not down slope or down wind. NFPA says that direct flame impingement protection requires water flow of at least 500 gpm from an unmanned monitor nozzle. This is a situation for properly trained, equipped and supported structural firefighters.
