

### **Data Quality**

Mortality data from CY2007 to CY2023 are included in this output. These are the best available data from the National Park Service Public Risk Management Program (PRMP). PRMP aggregates data from NPS systems that are updated continuously. If you have any questions, please contact the PRMP team.

Prior to 2014, the PRMP collected data only on unintentional deaths (e.g. drownings, motor vehicle accidents, and undetermined deaths). This accounts for the significant difference in total number of deaths between 2013 and 2014.

Data for CY2017-CY2023 are *provisional* and have not undergone the quality check process. They were collected and analyzed – as such, they are estimates that may differ from the final count. The NPS will update the data as more information becomes available.

### **Communicating Safely About Suicide**

This data output includes information about completed suicides. Studies show that reading, hearing, or seeing information about suicide can trigger vulnerable individuals and increase the risk of suicide and suicidal behaviors.

Communication is a powerful tool. The National Park Service Public Risk Management Program works to communicate about suicide in a way that reduces stigma, provides resources for those who need them, and shares a message of hope, awareness, and promote resilience.
