

Plant Checklist

Santa Cruz Island Ironwood
by Ellie Yun Hui Tu

Channel Islands National Park supports a diverse terrestrial flora, including many rare, relict, and endemic species, as well as many nonnative species. Numerous plants are rare on the islands but have a wider distribution on the mainland. On the other hand, due to environmental conditions and isolation from the mainland, many of the plants that are native on the California mainland do not grow here. A total of about 801 plant taxa, including species, subspecies, varieties, and forms, have been identified in the park, of which about 580 are native and 213 are alien or non-native. (Note: the discrepancy between the sum of native and non-native and the total sum is because for several species their native/non-native status is unknown.)

Each island supports a unique assemblage of vegetative communities, which differ due to climate, microhabitats, topography, geology, soils, plant colonization history, isolation, and land use history. Many of the islands' native vegetative communities have been greatly altered by people and the introduction of nonnative species and are in various stages of recovery. The major vegetative community types on the islands include coastal dune, coastal bluff, coastal sage scrub, grasslands, chaparral, island oak woodlands, mixed hardwood woodlands, pine stands, and riparian areas. Currently, the most extensive vegetation communities on the islands are grassland and coastal sage scrub with significant areas of chaparral on Santa Cruz Island, and to a lesser degree, on Santa Rosa Island. Various phases of coastal bluff scrub constitute the next largest category. Mixed broadleaf woodland stands, oak woodlands, and pine stands are scattered throughout on sheltered slopes and canyons, or on ridges exposed to frequent moist fogs. Smaller but no less significant vegetation communities include coastal dune, baccharis scrub, caliche scrub, and wetlands.

This checklist treats plants found on the five islands that comprise Channel Islands National Park. All plants known from these islands are listed alphabetically by family within related plant groups (i.e., ferns and their allies conifers, dicots, and monocots). For the most part, taxonomic nomenclature follows *A Flora of Santa Cruz Island*, *The Jepson Manual: Higher Plants of California*, and/or *A Revised Flora of Santa Barbara Island*. Hybrids of species [which tend to exhibit characteristics intermediate between those of the two parent forms (some hybrid oaks, for example)] have been intentionally omitted. Cultivated plants near buildings also have been excluded from the list. Park visitors are encouraged to record their observations, and to report any which add to, or differ from, this list. This will help to update our knowledge of island plants, and will be useful when revisions are made to this checklist.

The scientific name of each plant is followed by synonyms or misapplied names (in parentheses) and then by one of the more common names if any are known. Entries in the status column identify plants which have a limited distribution or are considered to be species of special environmental concern. Five additional columns indicate the known distribution of a plant within Channel Islands National Park. Occurrence on an island is indicated by a one-letter symbol for each island.

The symbol “~” indicates the former scientific name of the plant. Plants which have such a restricted distribution are referred to as island endemics. Plants found on only one island are called single island endemics and are indicated by “E” in the status column in the checklist. Plants that are known from more than one island are indicated by “E+” in the checklist.

Plants on this checklist that are listed as endangered or threatened or are under consideration for listing by federal and/or state government (and therefore are protected under the Endangered Species Act of 1973 and/or the California Endangered Species Act of 1984) are identified in the checklist by a triangle “▲”.

Plants that are considered rare or are of special environmental concern by the California Native Plant Society (CNPS) or the California Natural Diversity Database (CNDDDB) are indicated by a rectangle “■”.

Each of the islands included in the park has experienced some degree of human settlement from the time of the Chumash Indians, through ranching operations, to management as a National Park. Human activities, especially in the past two hundred years, have altered the flora of the islands through the introduction of alien (non-native) plants and animals. This checklist identifies plants whose natural distribution, up to the time of European contact, did not include California. On this basis, they are assumed to be introduced to the islands, and are identified as alien or non-native species (noted by “*” next to the scientific name in the checklist). There are, in addition, plant species native to the California mainland that have been accidentally or deliberately introduced to the islands. These are indicated as alien “!” next to the symbol for the particular island for which this status is appropriate. These presumed introductions are determined on the basis of planting records, the lack of any early evidence for their presence, the fact that they occur primarily in disturbed habitats, and/or an island location which is a great distance outside of the species' normal range.

It is policy of Channel Islands National Park to maintain or restore lands under their stewardship toward conditions that prevailed before European settlement, where possible. Therefore, some alien plant species have been removed through alien weed control. These eradicated plants are indicated in the checklist by “!!”.

Some native plants are known or assumed to have been extirpated on one or more islands through habitat disturbance by feral animals ranching or farming activities, or other disturbances. These extirpated plants are identified in the checklist by “!”. However, recent re-discovery of several of these plants, upon removal of the sources of habitat disturbance, encourages us to continue to search for more. Under the protection and management of the National Park Service, scientists are studying ways to reduce the effects of alien animals and plants on native plant species, and to preserve the habitat of those plants identified by the federal and state governments, and public and private conservation agencies, as species of concern.

FERNS AND FERN ALLIES						
Blechnaceae (Chain Fern Family)						
<i>Woodwardia fimbriata</i> giant chain fern			R	C		
Dennstaedtiaceae (Bracken Fern Family)						
<i>Pteridium aquilinum</i> v. <i>pubescens</i> Western bracken fern			R	C		
Dryopteridaceae (Wood Fern Family)						
<i>Athyrium felix-femina</i> v. <i>cyclosorum</i> Western lady fern			R?	C		
<i>Cystopteris fragilis</i> fragile fern				C		
<i>Dryopteris arguta</i> wood fern		M	R	C	A	
<i>Polystichum munitum</i> western sword fern			R	C		
Equisetaceae (Horsetail Family)						
<i>Equisetum hyemale</i> s. <i>affine</i> scouring rush			R	C		
<i>Equisetum laevigatum</i> smooth scouring rush			R	C		
<i>Equisetum telmateia</i> s. <i>braunii</i> giant horsetail				C		
Polypodiaceae (Polypody Family)						
<i>Polypodium californicum</i> California polypody			R	C	A	B
<i>Polypodium scolieri</i> leather-leaf fern:				C		

Coast polypody						
Pteridaceae (Maiden Hair Family)						
<i>Adiantum aleuticum</i> (~ <i>A. pedatum</i> s. <i>aleuticum</i>) Five-finger maidenhair				C		
<i>Adiantum capillus-veneris</i> Southern maidenhair			R	C	A	
<i>Adiantum jordanii</i> California Maidenhair		M	R	C	A	
<i>Aspidotis californica</i> California lace fern				C		
<i>Cheilanthes clevelandii</i> Cleveland's lip fern			R	C		
<i>Cheilanthes cooperae</i> Mrs. Cooper's lip fern				C		
<i>Pellaea andromedifolia</i> coffee fern		M	R	C	A	
<i>Pellaea mucronata</i> v. <i>mucronata</i> bird's foot fern			R	C		
<i>Pentagramma triangularis</i> s. <i>triangularis</i> (~ <i>Pityrogramma t. v. t.</i>) gold-back fern		M	R	C	A	
<i>Pentagramma triangularis</i> s. <i>viscosa</i> (~ <i>Pityrogramma t.v.v.</i>) silver-back fern			R	C		
Selaginellaceae (Spike-Moss Family)						
<i>Selaginella bigelovii</i> bushy spike-moss			R	C	A	

CONIFERS						
Cupressaceae (Cypress Family)						
<i>Cupressus macrocarpa</i> Monterey cypress			R*	C*	A*!	
Pinaceae (Pine Family)						
<i>Pinus muricata</i> forma <i>muricata</i> Bishop pine			R	C		
<i>Pinus muricata</i> forma <i>remorata</i> Santa Cruz Island Pine			R	C		
* <i>Pinus pinea</i> Italian stone pine				C		
<i>Pinus radiata</i> Monterey pine		M*!!				
<i>Pinus torreyana</i> s. <i>insularis</i> Santa Rosa Island Torrey pine	E■		R			

DICOTYLEDONOUS FLOWERING PLANTS						
Aceraceae (Maple Family)						
<i>Acer macrophyllum</i> bigleaf maple				C		
Adoxaceae (Adoxa Family)						
<i>Sambucus mexicana</i> elderberry			R	C		
Aizoaceae (Iceplant family)						
* <i>Carpobrotus chilensis</i> (~ <i>C. aequilaterus</i>) Sea-fig		M	R	C	A	B
* <i>Carpobrotus edulis</i> hottentot-fig			R	C	A	
* <i>Malephora crocea</i>					A	
* <i>Mesembryanthemum crystallinum</i>		M	R	C	A	B

Crystalline iceplant						
* <i>Mesembryanthemum nodiflorum</i> Small-flowered iceplant		M	R	C	A	B
* <i>Tetragonia tetragonioides</i> New Zealand spinach		M	R	C	A	
Amaranthaceae (Amaranth Family)						
* <i>Amaranthus albus</i> tumbleweed			R	C	A	
<i>Amaranthus blitoides</i> prostrate pigweed			R	C		
* <i>Amaranthus deflexus</i> low amaranth				C		
<i>Amaranthus powellii</i>				C	A	
Anacardiaceae (Sumac Family)						
<i>Rhus integrifolia</i> lemonade berry		M	R	C	A	
<i>Rhus ovata</i> sugar bush				C		
* <i>Schinus molle</i> Peruvian pepper tree			R	C		
<i>Toxicodendron diversilobum</i> poison oak		M	R	C	A	
Apiaceae (Celery or Carrot Family)						
<i>Apiastrum angusifolium</i> wild celery		M	R	C	A	B
* <i>Apium graveolens</i> celery			R	C		
<i>Berula erecta</i> cut-leaved water parsnip		M		C		
<i>Bowlesia incana</i> bowlesia			R	C		
* <i>Conium maculatum</i> poison hemlock				C		
<i>Daucus pusillus</i> rattlesnake weed		M	R	C	A	B
* <i>Foeniculum vulgare</i> sweet fennel		M	R	C		
<i>Lomatium caruifolium</i> caraway-leaf lomatium		M	R	C		
<i>Sanicula arguta</i> sharp-toothed snakeroot		M	R	C	A	
<i>Sanicula hoffmannii</i> Hoffmann's snakeroot	■		R!?	C		
* <i>Torilis arvensis</i>			R	C		
* <i>Torilis nodosa</i> knotted hedge-parsley		M	R	C		
<i>Yabea microcarpa</i> (~ <i>Caucalis m.</i>) California hedge-parsley				C		
Apocynaceae (Dogbane Family)						
* <i>Vinca major</i> periwinkle				C		
Asclepiadaceae (Milkweed family)						
<i>Asclepias fascicularis</i> narrowleaf milkweed			R	C		
Asteraceae (Sunflower Family)						
<i>Achillea millefolium</i> yarrow		M	R	C	A	B
<i>Achyrachaena mollis</i> blow-wives			R	C		
<i>Acourtia microcephala</i> (~ <i>Perezia m.</i>) Sacapellote			R	C		
<i>Agoseris apargioides</i> v. <i>apargioides</i> Seaside-dandelion			R			
<i>Agoseris grandiflora</i> Large-flowered mountain-dandelion		M	R	C		
<i>Agoseris heterophylla</i> mountain-dandelion			R			
<i>Amblyopappus pusillus</i> pineapple weed		M	R	C	A	B
<i>Ambrosia acanthicarpa</i> annual burweed					A*!!	

<i>Ambrosia chamissonis</i> beachbur; Silver beach-weed		M	R	C	A	
<i>Ambrosia psilostachya</i> (~ <i>A. p. v. californica</i>) Western ragweed		M*?	R*?			
* <i>Anthemis cotula</i> mayweed			R	C		
* <i>Arctium</i> sp. Burdock			R			
<i>Artemisia californica</i> coastal sagebrush		M	R	C	A	B
<i>Artemisia douglasiana</i> mugwort			R	C		
<i>Artemisia nesiotica</i> (~ <i>A. c. v. insularis</i>) Island sagebrush	E+					B
<i>Aster chilensis</i> common California aster			R	C		
<i>Aster radulinus</i> rough-leaved aster			R	C		
<i>Aster subulatus</i> v. <i>ligulatus</i> (~ <i>A. exilis</i>) Slim aster			R	C		
<i>Baccharis douglasii</i> sticky baccharis		M	R	C		
<i>Baccharis emoryi</i> Emory's baccharis						B
<i>Baccharis pilularis</i> (~ <i>B. p. s. consanguinea</i>) Coyote brush		M	R	C	A	B
<i>Baccharis plummerae</i> s. <i>plummerae</i> Plummer's baccharis				C	A	
<i>Baccharis salicifolia</i> (~ <i>B. glutinosa</i>) mulefat; Seep-willow		M	R	C	A	
<i>Blennosperma nanum</i> v. <i>nanum</i>				C		
<i>Brickellia californica</i> California boneset				C	A	
* <i>Carduus pycnocephalus</i> Italian thistle		M	R			
<i>Centaurea melitensis</i> tocalote		M	R	C	A	B!
* <i>Centaurea solstitialis</i> yellow star-thistle				C		
<i>Chaenactis glabriuscula</i> v. <i>lanosa</i> Pincushion flower			R			
* <i>Chamomilla suaveolens</i> (~ <i>Matricaria matricarioides</i>) Pineapple weed			R	C	A	
<i>Chrysanthemum coronarium</i> Garland chrysanthemum				C		
* <i>Cichorium intybus</i> chicory				C		
<i>Cirsium brevistylum</i> Indian thistle				C		
<i>Cirsium occidentale</i> v. <i>californicum</i> (~ <i>C. californicum</i>) California thistle			R	C
