CRATER LAKE NATIONAL PARK OREGON

Crater Lake—mysterious and beautiful—lies in the center of Crater Lake National Park, on crest of the Cascade Range in Southern Oregon. The bed of Crater Lake is the crater of Mt. Mazama, a mighty volcano 15,000 feet high, which erupted ages ago, then collapsed and disappeared within itself.

To-day the rim of the crater rises from 600 to 2000 feet above the surface of the lake. The latter is circular in form, six miles long and 2000 feet deep. To spin around the lake the auto covers 35 miles. No grander scenic highway than this Rim Road. An ever changing panorama of mountain scenery vies with marvelous glimpses of the lake below. The intense blue of the water melts to a turquoise along the edges, with here and there the red, pearl and yellow reflected by the rim walls. According to the weather and hour this amazing color spectacle changes at times while you watch. Be it cloudless sunshine, twilight, storm or shower, moon or starlight, always the color effects stun and enrapture.

“The Sea of Silence,” Jonquin Miller calls Crater Lake.

The drive through the Park is through heavy timber. Each stretch and bend of the road unfolds a new and beautiful scene.
