_____	Rainbow Trout.....[<i>Oncorhynchus mykiss</i>]	C	U

Devils Postpile Animal Checklist

Devils Postpile National Monument lies on the western slope of the Sierra Nevada along the Middle Fork of the San Joaquin River at an elevation of 7,600 feet. Devils Postpile contains a variety of habitats including montane meadows, riparian areas, coniferous forests, and post-fire herbaceous landscapes. These habitats support a diversity of animal life.

This list provides 47 species that have been detected in and around the Monument.

Devils Postpile National Monument

Checklist of Animals

Presence

C = Confirmed presence

P = Probable presence

U = Unconfirmed sighting

Tracks, scat, and visual sightings confirm the presence of a species. Sometimes habitat alone can suggest a species presence; these species are designated as probably present. Unconfirmed sightings are based on unauthoritative sightings and may be confused with a similar species.

Abundance

C = Common

U = Uncommon

R = Rare

? = Unknown

Common species may be found throughout the Monument. Uncommon species are usually seen by chance and probably live in isolated areas. Rare species may be extremely elusive or transitory.
