Everglades National Park Florida

# **Bird Checklist**

Printed through the generosity of the Everglades Association. September 2005

# Introduction

Everglades National Park was established in 1947 to protect south Florida's subtropical wetlands, particularly the diverse and abundant birdlife. It's difficult to imagine that the number of birds we see here today is only a small fraction of what once existed. Due to the widespread slaughter of wading birds for their plumes in the early 1900s, and intense water management practices over the last 90 years, 90%-95% of the bird population has disappeared. Despite this tragic decline, birds continue to be one of the park's primary attractions.

This checklist is a complete list of birds observed in the park, a total of 366 species as of September 1, 2003. The key below indicates the seasonal occurrence and frequency of each species. The likelihood of observing a particular species is dependent upon being in the proper habitat during the correct season.

This list reflects the continuing growth of information about the birds of the park and follows earlier checklists compiled by Willard E. Dilley, William B. Robertson, Jr., Richard L. Cunningham, and John C. Ogden. As noted in the list, many birds in Everglades National Park are known from only a few records. Users of this checklist can contribute to future lists by carefully recording the details of their observations of less common species and reporting the information to park personnel.

Special thanks to the late Richard "Dick" Cunningham and Oron "Sonny" Bass for revising this current list. The park dedicates this new checklist to Dick Cunningham as a tribute to his many contributions to the NPS and the birding community.

Key	B Sp S	F W
Breeding	Breeding Summer	Winter
R Breeding status	3 /	all

- B Breeding status
- + Breeds in the park
- ? Breeding status unknown

#### Seasons

Sp - Spring (March I - May 3I)

S - Summer (June 1 - July 31)

F - Fall (August 1 - November 15)

W - Winter (November 16 - April 30)

#### **Abundance**

- c Commonly observed (seen 50% or more of the time)
- u Uncommonly observed (seen less than 50% of the time)
- r Rarely observed (seen less than 25% of the time)
- \* Fewer then 10 records

# **Habitats in the Park**

#### **Pinelands**

The pine forest within Everglades National Park is the last remaining large stand of the once extensive Dade County slash pine forest of southeastern Florida. Good viewing areas include Pinelands Nature Trail and the area surrounding Long Pine Key campground.

#### Hardwood Hammocks

To walk into a hammock is to take a trip through a tropical forest. These dense groves of primarily West Indian hardwood trees provide cover as well as abundant food for birds. Hammocks can easily be explored by following the Gumbo Limbo Trail, Mahogany Hammock Trail, and the Bobcat Boardwalk.

## Sawgrass

This community is the true Everglades, a shallow, slow-moving freshwater river characterized by sawgrass. During the dry season wading birds concentrate in deeper sections of the sloughs to feed. A variety of wading birds may be found in these areas. Good spots to catch the action include the Anhinga Trail, Shark Valley, and Nine Mile Pond.

# Cypress

Spanish moss draped cypress trees are a common image of Florida. Most of the large cypress swamps are found north of Everglades Ntional Park. However, a dwarf cypress forest can be viewed on the Pa-hay-okee Trail or along the main park road near Rock Reef Pass.

#### **Mangrove Forest/Estuaries**

Everglades National Park is home to the largest continuous mangrove forest in the United States. Mangrove islands, known as keys, provide important nesting sites for colonies of wading birds. Salt Marsh Mosquitoes supply wintering and migrating insect eating birds with an abundant food source. The dense mangroves also provide a summer breeding ground for many birds. To explore the mangrove forest and estuary, walk the West Lake, Bear Lake, or Snake Bight Trails near Flamingo. Canoe these tangled forests via waterways near both Everglades City and Flamingo. Be prepared for mosquitoes, particularly during the summer.

# **Beaches**

Accessible only by boat, Everglades National Park's beaches provide the opportunity to view shore birds, Magnificent Frigatebirds, pelicans, and various wading birds such as ibises, herons, and egrets.

# **Birdwatching Spots**

# **Anhinga Trail**

Wading birds, cormorants, Purple Gallinules, and nesting Anhingas may be found along the path anytime of the day during the winter (dry) season.

#### **Eco Pond**

Wading birds, American Coots, Osprey, White-crowned Pigeons, warblers, Red-Shouldered Hawks, Anhingas, rails, Painted Buntings and other transients are best viewed here in the morning.

## **Gulf Coast Visitor Center and vicinity**

Wading birds, cormorants, Osprey, Bald Eagles, pelicans, and shorebirds can be observed from the visitor center or by boat in the 10,000 Islands. Peregrine Falcons, Swallow-tailed Kites, Wood Storks, skimmers, and a variety of warblers make a seasonal appearance.

## Mahogany Hammock and vicinity

Cape Sable Seaside Sparrows may be heard and seen early in the morning from the main park road during the spring. Bald Eagles and warblers are also active in the morning, while Barred Owls come out in the evening.

#### **Mrazek Pond**

Most of the year only a few ducks and wading birds, but for a few days during some winters, large numbers of wading birds, including Roseate Spoonbills and Wood Storks, move in to feast.

#### **Nine Mile Pond**

Snail Kites, wading birds, Wood Storks, Roseate Spoonbills, Limpkins, and White-Crowned Pigeons make this spikerush community their home. The best times to find these birds is in the morning via canoe.

# **Paurotis Pond**

Roseate Spoonbills and wading birds make appearances yearround, while in the early spring a Wood Stork rookery dominates the mangroves of this small pond.

#### **Shark Valley Tram Road and vicinity**

Wood Storks, wading birds, Snail Kites, and Anhingas may be found throughout the day along the tram road.

## **Snake Bight Trail**

Warblers and Mangrove Cuckoos frequent the trail in the morning hours while wading birds, shorebirds, and flamingos sometimes feed near the boardwalk at high tide.
