

Until 1800, Indians held undisputed sway over the country dominated by the Three Tetons, frequently coming across the passes into the basins on warring MAN or hunting expeditions. The Tetons probably first became known to white

AND THE TETONS

men in 1807-8 when the intrepid John Colter crossed the range on the journey that also made him the discoverer of the Yellowstone country. In 1811 the Astorians, under Wilson Price Hunt, entered Jackson Hole and crossed the range on their expedition to the mouth of the Columbia.

The decades that follow are frequently referred to as the "fur era," for the Tetons became the center of remarkable activity on the part of fur trappers representing both British and American interests. By 1845 the trappers had vanished from the Rockies; during the next four decades the valleys near the Tetons were largely deserted except for wandering bands of Indians who occasionally drifted in.

But the frontier was relentlessly closing in, and one Government expedition after another passed through or near the Teton country. These parties named many of the park's natural features, including Leigh, Jenny, Taggart, Bradley, and Phelps Lakes, and Mount St. John.

In the late 1880's came the first settlers. They entered by the Gros Ventre River and Teton Pass and settled first in the south end of the valley. Two

Intricate and inspired artwork representing many American Indian cultures is displayed in the David T. Vernon Memorial collec-tion at the Colter Bay

old homesteads have been partially restored as historic sites: Menors Ferry near park headquarters and the Cunningham place on the east side of the valley.

Among the later settlers were those men who recognized that this beautiful area should be preserved for all people. They had great foresight and a strong feeling that the region should be protected from exploit

In 1929 the Teton Range and the lovely lakes at the mouths of its deep canyons were assured pro-tection by the establishment of Grand Teton National Park. But it was obvious that part of the valley, with its own charms, was also in need of protection. Thus, the Jackson Hole area was made a National Monument in 1943; in 1950, Congress set aside the upper valley in a greater Grand Teton National Park. The gross area of the park is now 1,256 square kilometers (485 square miles), of which about 98 percent is in Federal ownership.

The Grand Tetons, among the noblest creations in the American West, are a congregation of blue-gray pyramids soaring more than a mile above the sage-THE brush flats and morainal lakes of Jackson Hole. The Tetons are striking examples of the fault-block type of mountain. The steep eastern front is the result of GEOLOGICAL STORY a recent geological uplift of the range along a great fracture line—a fault—in the earth's crust. Similar mountain systems, such as the Sierra Nevada in California and many of the desert ranges of the Great Basin, also owe their existence to block faulting. The Teton fault shows signs of movement within the last

few thousand years; in the context of geological time, this means that we can consider that the process is still going on.

In striking contrast to the youth of the mountain range is the great age of the rocks themselves. Recent datings by geophysicists reveal that some of the crystalline rocks are about 21/2 billion years old! Yet these once-molten veins penetrate rocks that were already ancient and metamorphosed into gneiss when these intrusions came up from below. Here, then, some of the oldest rocks in the world have been brought to light by one of the most recent mountain uplifts.

Erosion has completely cut away great segments of the mountain mass—erosion that probably began with the very first uplift of the mountain block. As uplift proceeded, erosion continued more intensely with increase in the gradients of the mountain streams. These rushing torrents tore away rocks, creating gorges.

Buck Mtn. 1 Middle Teton 6 Mt. Wister 2 Teepe Pillar 7 Nez Perce Peak 3 Grand Teton 8 Cloudveil Dome 4 Mt. Teewinot 9 South Teton 5 Mt. St. John 10

Then came the profound sculpturing of the ice age. During the past million years several periods of intense mountain glaciation have occurred. At the head of each gorge more snow piled up in winter than would melt the following summer. Great masses of snow slowly changed to glacial ice. In response to the inexorable pull of gravity these masses became streams of creeping ice, which plucked off bits of the canyon wall here and ground away rock obstructions there.

At one time this valley was filled with a great ice mass, formed by mountain glaciers from the Tetons and from the highlands of the present Yellowstone National Park. Glacial debris (gravel and cobbles) on top of Signal Mountain was dropped by this inland sea of ice.

Fluctuations in the climate melted away this ice sheet, only to bring back glaciers of smaller size during more recent cold periods. As recently as 9,000 years ago valley glaciers flowed from the crest of the Teton Range down to Jackson Hole. Crescent mounds (terminal moraines) left at the snouts of these most recent glaciers now are the natural dams for the lakes at the foot of mountain slopes.

Again the climate moderated and became about what it is today. The ice melted away and, retreating gradually, once again exposed the canyon bottoms. The forces of rain, wind, landslides, and other agents

Buck Mtn.

Fault

of erosion resumed their attack on the uplifted range. Ice sculpturing is evident in all the major canyons

> of the park. Although the present glaciers are a mere vestige of the king-size masses of the ice age, they are still quarrying away into the face of the mountains. No one can confidently predict whether glaciers will once again extend and fill these valleys or when another mountain uplift might occur. There is no reason to think, however, that either process has come to an end. Thousands of years from now the scene may be quite different from that which delights the visitor today.

> Because most of the ice has vanished, you can see the effect these glaciers had on the landscape. At the head of each canyon is a rounded natural amphitheater, called a cirque. These were the gathering places for mountain glaciers from which great ice tongues extended downward. The U-shaped valleys were carved out by the now vanished ice. Smaller tributary glaciers plucked away at each of the higher peaks of the range. This detailed sculpturing resulted in the noble spires that extend along the range and culminate in the majestic cathedral-like pinnacle of Grand Teton. Much of the rock waste carried down from the eroding mountain range was strewn in the valley, making up a great deal of the present flat floor of Jackson Hole. Good cross sections of this valley fill are displayed where the Snake River has carved through it. You can see the entrenched valley from several overlooks on the Jackson Hole Highway.

Animals, All of Grand Teton National Park is a sanctuary. Look in the WILDLIFE valley for elk, mule deer, AND PLANTS and bison. Mule deer and elk range from the lowest parts of the valley to the tree line. A pond-side vigil may reward you with the sight of moose feeding on aquatic vegetation

The chipmunk, goldenmantled ground squirrel and other smaller mammals are surprisingly bold; they will tease you by scampering along the trail in front of you, but will disappear in a flash if you approach them. Among the barren rocks live the pika ("cony"), a relative of hares and rabbits, and the yellowbelly marmot, a large rodent.

The even larger beaver was busily at work long before this area ever became a park and is still at it. Look for examples of beaver work along the Snake River and its tributaries. Wildlife viewing is best in the early morning and late afternoon hours. All native animals are wild: some may attack unpredictably, so do not feed or approach them. Photograph them from a safe distance, using telephoto lenses for closeups. Attendants at the visitor centers can help you identify and locate such species as moose, elk, bighorn, pronghorn, beaver, trumpeter swans, and eagles. Bird and mammal checklists are

available at visitor

centers.

A woodpecker pauses before entering her nest in a dead lodgepole pine

flowers. A stroll on the valley floor or on one of the trails into the high country will take you through forests of lodgepole pine, Engelmann spruce, limber and whitebark pines, alpine fir, and Douglas-fir. Cottonwoods grow in profusion along the streams, together with willows and aspens -important food for moose and beaver.

Trees, Shrubs, and Wild-

In the valley and on intermediate terrain are stands of sagebrush in open or unforested sites, silverberry bushes glistening on the sandbars, and creeping mahonia with prickly, holly-like leaves.

Grand Teton became a national park in 1929, but the area as then established included only the eastern side of the mountains and Jenny and Leigh Lakes. THE Left out were Jackson Lake and vast areas on the valley floor where the wapiti (elk) range in the winter. PARK The park, at its inception, was incomplete. In 1926, Horace M. Albright, then superintendent

STORY

of Yellowstone National Park and later director of the National Park Service, took Mr. and Mrs. John D. Rockefeller, Jr., and their children on a two-day trip through Jackson Hole. That trip began the process which eventually enlarged the park to its present boundaries. A year later, Rockefeller began to purchase land in Jackson Hole with the idea of deeding it to the National Park Service at an appropriate time. Though difficulties prevented the establishment of

a larger national park in Jackson Hole during the 1930s, Rockefeller continued his land purchases, eventually amassing 32, 189 acres. In 1943, at his urging, the Federal Government took control of the land by means of Presidential proclamation. Despite this turn of events, regional interests continued to

prevent the development of the land as a park. National park status for the area as it is came only in 1950. Since then Grand Teton has become one of America's most popular and widely acclaimed national parks.

The contributions of John D. Rockefeller, Jr., were recognized by the establishment in 1972 of the Memorial Parkway bearing his name.

Jackson Lake Dam, a link in the development of the water and land resources of the Upper Snake River Basin, was built in 1916 and is operated by the Bureau of Reclamation, U.S. Department of the Interior. It was originally authorized for irrigationsome 444,000 hectares (1,100,000 acres) of the fertile Snake River Valley—and for flood control along the Snake and Lower Columbia Rivers. The project has also contributed to outdoor recreation and fish and wildlife conservation.

weather, activities, and available facilities on a 24hour basis all year. Phone (307) 733-2220. Visitor centers are designed to help you know and OF PARK enjoy your park better. Here you can obtain infor-INFORMATION mation, publications, and all necessary permits for backcountry camping, boating, and oversnow travel. Write the Grand Teton Natural History Association, Moose, WY 83012, for a publication price list covering history, trails, topographic maps, and natural history.

For your safety and the protection of park features. Please . . Observe posted speed limits. SAFETY Report all accidents to a park ranger. Drive vehicles only on established roadways. PRECAUTIONS Camp only in designated sites.

Obtain a camping permit for back-country sites. Before starting on any off-trail hike or climb, register at the Jenny Lake Ranger Station in summer and at Park Headquarters during other seasons. Keep pets physically restrained and off trails. Obtain a boat permit for any watercraft. Leave rocks and plants in their natural setting. Fish with a Wyoming State license. Obtain an oversnow vehicle permit at Moose Visitor Center for winter travel. Keep motor vehicles off bikeways. All park animals-including bears-are wild: do not feed or molest them. Lightning-caused fires are allowed to burn in

some parts of the park. If one is in progress, check with a ranger before planning a trip to the burn area.

TETON'S SEASONS

Eternal snows and unceasing winds at summit elevations; water lilies and shimmering sagebrush in the lowlands-the seasons at Grand Teton reflect both the mountain heights and the calendar. Seasonal changes dominate the park, however, bringing warmth and life, winter and stillness in their turn. Spring visitors are attracted by wildflowers, migrating birds, and elk during May and June, despite frequent rains and cool temperatures. If you intend to hike or camp, bring warm clothing and raingear. Be prepared for a variety of weather conditions, since it snows in either month. Temperatures can range from below freezing to over 20°C (about 70°F).

winds coming from the southwest. Daytime temperatures average near 30° C (80° F), dropping to about 4° C (40° F) at night. Park attendance has averaged 1 million a month, so patience may be necessary if trails are crowded and campsites are taken. Autumn color is best about the first week of October when the aspen and cottonwood trees attain their most brilliant yellow hues. Days are generally cool and clear during September and October. To many visitors, this is the finest time of the year. Most park facilities are open in September, when it's easy to find space in lodges and campgrounds. During the month of November, elk migrate through the park to their winter range. Expect frosty nights warming to 15-20°C (about 65°F) in early autumn. Winter lasts from November through April, with an average 5 meters (16 feet) of snowfall. Blizzards may last for several days, making travel hazardous, especially during whiteouts. Automobiles access Glacier lilies bloom is provided from Jackson on north to Flagg Ranch Village via the snowplowed Rockefeller Parkway. Highway 26-287 is open to Riverton and Lander east of the park.

The Teton Park Road is plowed north from Moose to the Cottonwood Creek Turnout parking area. This is a major debarkation point for ski-tourers, snowshoers, and snow mobilers. Another jump-off spot is Colter Bay, especially for ice-fishermen. Snowmobilers are not permitted on plowed roads, but may use any of the designated unplowed routes. Special regulations, including a registration permit, apply to oversnow vehicles. Sign out/sign in boxes are provided for all types of oversnow day-use trips. Concessioner ski-touring trips are available in the park. Winter mountaineering requires its own precautions and prior registration at the Moose Visitor Center. Bring your longies-daytime temperatures average near freezing, dropping to well below that at night.

The eternal cycles of cli-mate and weather leap into focus above the Snake River. Level glacial deposits, indicative of a once-colder climate, are revealed by the cutting action of the river.

Summer days during July and August are generally warm and occasionally hot. Afternoon thunderstorms may completely cover a sky that was clear in the morning, Hikers, climbers, and small craft operators need to pay special attention to clouds and

close behind the melting snows of springtime.

of the Teton Range is a jagged, glacier-carved and barren alpine wilder-

We're joining the metric world. The National Park Service is introducing metric measurements in its publications to help Americans become acquainted with the metric system and to make interpretation more meaningful for park visitors from other nations.

Grand Teton National Park and the John D. Rockefeller, Jr., Memorial Parkway are administered by the National Park Service, U.S. Department of the Interior. A superintendent, whose address is Moose WY 83012, is in immediate charge of these parks.

ASHTON

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the wisest use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department asse our energy and mineral resources and works to assure that their development is in the best interests of all our people. The Department also has a major responsibility for American Indian reservation communities and for people who live in Island Territories under U.S. administration.

JOHN D. ROCKEFELLER, JR., MEMORIAL PARKWAY

The Parkway. The 132-kilometer (82-mile) Rockefeller Parkway, linking West Thumb in Yellowstone National Park with the South Entrance of Grand Teton National Park, was established on August 25, 1972, in recognition of John D. Rockefeller Jr.'s generosity. The main land area of the parkway, encompassing approximately 9,700 hectares (24,000 acres), lies between Yellowstone and Grand Teton National Parks. Within the parkway are an historic gravesite, army camp, freight station site, and a part of the Ashton-Moran freight road which operated until 1927.

From 1872 until 1907, the area was under Federal management primarily to prevent exploitation of the critical watershed. In 1908, the area became part of the Teton National Forest, and in 1972 it was transferred to the jurisdiction of the National Park Service.

The Snake River is the principal natural feature of the parkway area, and it follows a winding course through the eastern half of the area before flowing into Jackson Lake in Grand Teton National Park. Picturesque, occasionally steep cliffs and rock outcrops punctuate the lodgepole pine highlands along the western rim of the area. The eastern side of the area predominantly contains lodgepole pine forests and open meadow areas and is adjacent to the Teton wilderness area of the Teton National Forest. The superintendent of Grand Teton National Park, ments. The most notable example of his efforts is whose address is Drawer 170, Moose WY 83012, is in charge of the parkway.
