NATIONAL REGISTER OF HISTORIC PLACES
REGISTRATION FORM

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in Guidelines for Completing National Register Forms (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries. Use letter quality printers in 12 pitch. Use only 25% or greater cotton content bond paper.

Describe present and historic physical appearance.

The Jenny Lake Ranger Station Historic District buildings were built from standardized plans (comfort stations) and local adaptations of National Park Service plans in the rebuilding of the ranger station and studio more than fifty years ago. The complex was built on the southeastern shore of Jenny Lake north-northwest of Moose, Wyoming, near a number of trail heads into the Teton Mountains which rise west of the lake and by a long-time boat concession facility for the lake. Both historically and today the district is set amongst pine trees that are part of the forest belt that parallels the edge of the lake. The resources that make up the district include a ranger station that functions as not only the ranger's office but also visitor center, a store that was a photographers studio from 1931 to 1958 and two comfort stations associated with camping areas nearby. When these buildings were built or rebuilt (studio and ranger stations) the architectural philosophy of the National Park Service was to construct in harmony with the surrounding environment. Clearly evident is the attempt by the National Park Service to achieve the appearance of pre-industrial buildings set in the pine forests.

Rustic in this district, as throughout Grand Teton, is characterized by log construction with some other wood products, such as rough cut board and batten for the doors. Trim is of rough cut "millwaste" type lumber and decoration is minimal. The buildings are one story and have steeply pitched roofs to withstand snow loads. The design of the comfort stations appears to be from a standard set of plans used by the National Park Service during the late 1920s and early 1930s. The studio and ranger station were made from other buildings, located elsewhere in the park, disassembled, and then rebuilt at their present locations in 1930 (ranger station) and 1931 (studio) following at least the guidelines, if not actual plans drawn up by National Park Service designers in the Omaha Office. Earthtones are the predominate colors with brown stained walls and weathered wood shingles. Even through the maintenance operations to keep the buildings active, the original or like materials have been used so the exterior feeling, design, and character have not been lost. The district still serves the same function that it did historically. The quality that sets the district apart from its surroundings is its rustic architecture and the fact that it is set in a small clearing in the pine forest on the edge of a natural lake. Post-World War II addition of a larger parking lot for visitor use at the ranger station and increased campground capacity has not destroyed the historic setting.

Verbal Boundary Description

The boundary of the nominated property is delineated by a triangle with the vertices at UTM points: A 12 522320 4844250; B 12 522420 4844420; and C 12 522440 4844320. The district is located on the Jenny Lake, Wyo., U.S.G.S. 7.5' quad-range map.

See continuation sheet

Boundary Justification The boundary as described includes the buildings of the district and a portion of the road and spaces around it to include the historic setting of the district and its feeling as a center of visitor activity.

Section number 8 Page 2

comfort stations were built by the CCC during 1934 and 1935 from NPS plans. They remain in use today.

The Ranger Station fulfills the registration requirements set forth in the multiple property documentation in that it is in its historic location and still maintains its setting to convey its feeling and character. The buildings are more than fifty years old and are of log and wood materials. The district is clearly rustic in style and conveys its design, materials, workmanship, and function/character. Interior remodeling and modernization have all but destroyed the interior fabric through impacts to the log walls and the interiors are not considered significant. The one non-contributing building is also a log cabin, but it was moved to the site in 1958 when it was acquired by the National Park Service. By being log, the recently moved structure, even though it does not contribute to the district, is not considered to be too great a detraction from the district.

In addition to the overall architectural significance of the district it is also associated with the conservation context and considered significant for that association under Criteria A and B. The Jenny Lake Ranger Station, built during the early 1930s, served as the park visitor center and principal point of public contact until completion of the visitor centers at Moose and Colter Bay during the 1960s. Beyond that the photographer Harrison Crandall, through his imagery of the Tetons, popularized the area as a place for vacations and when needed his images helped convince the skeptical of the value of the Jackson Hole area as a place worthy of preservation as a national park. Because the studio was the primary place of Crandall's active career and his contributions to the early history of the park it is considered significant as a conservation property. Because of the role it played in the early history of the park the Ranger Station is also considered significant as a conservation property.
