PRESERVATION OF THE PARK	24

Hello There!

A superb water and wilderness archipelago—this is Isle Royale National Park. The park staff is here to assist you and to protect Isle Royale's many treasures for all generations to come. We hope that you will share in this task of conserving for the future—whether for the next camper or for your own grandchildren. After all, it is your park.

Enchantment is here: Nature in all her moods of peace and violence, an island of mystery and scientific exploration, the world's largest fresh-water lake, and the site of 4,000 years of human history. Take time to savor all these things; you will be well rewarded.

The National Park System, of which this park is a unit, is dedicated to conserving the scenic, scientific, and historic heritage of the United States for the benefit and enjoyment of its people.

PROLOGUE

ISLE ROYALE is unique among the National Parks in its wilderness setting, cut off as it is from the mainland by many miles of Lake Superior waters. You can reach it only by boat or sea-plane, and upon arrival in the park you will find that there are no roads or wheeled vehicles.

With more than 200 small islands and countless minor rocks surrounding Isle Royale, the park is an archipelago. Shredding the northeastern end of the main island are four fiord-like harbors, longest of which is Rock Harbor. They are bounded by five chains of islands and peninsulas extending into the lake. An island chain at the southwestern end of Isle Royale separates Grace Harbor from Washington Harbor. Most of the harbors are navigable, and usually the water close to shore is deep.

Isle Royale is the largest island in Lake Superior. About 45 miles long and 9 miles across at its widest point, it occupies about 210 square miles. Highest point on the island is Mount Desor, 794 feet above lake level and 1,396 feet above sea level.

Park headquarters is on Mott Island, part of the island chain forming the southeast boundary of Rock Harbor.

*Woe unto them that join house to house,
That lay field to field,
Till there be no place
That they may be placed alone
In the midst of the earth.—Isaiah 5:8*

GETTING TO THE PARK

Boat service to the park is available from Houghton and Copper Harbor, Mich., and from Grand Portage, Minn. Cars can be left at these points on the mainland.

From late June through Labor Day, the *Ranger III*, the National Park Service boat, leaves Houghton each Tuesday, Thursday, and Saturday; it returns from Rock Harbor Lodge each Wednesday, Friday, and Sunday. Weekly trips are available for pre- and post-season campers.

The *Isle Royale Queen II*, privately operated by Ward Grosnick, makes a round trip daily from Copper Harbor to Rock Harbor Lodge; late June through Labor Day.

The *Hiawatha*, privately operated by Sivertson Bros. Fisheries, of Duluth, Minn., makes a round trip daily from Grand Portage to Windigo Inn; late June through Labor Day.

The *Voyageur*, also operated by Sivertson Bros. Fisheries, makes two or three trips weekly, circumnavigating Isle Royale and returning to Grand Portage; June through Labor Day. Pre- and post-season transportation is available for campers.

Since transportation schedules and costs vary from year to year, you should request current information in advance of

your trip to the park. This information may be obtained each year about May 1 by contacting the Superintendent, Isle Royale National Park, Houghton, Mich.

Daily rail service is available to Houghton via the Chicago, Milwaukee, and St. Paul Railroad connecting with the Soo Line.

Daily bus service to Houghton is maintained by the Northland Greyhound Lines. Connections are made with related lines providing service to all principal cities. Bus service is also available from Duluth to Grand Portage.

Air service is available from Chicago, Milwaukee, Detroit, Sault Ste. Marie, Duluth-Superior, Minneapolis-St. Paul, Green Bay, and Port Arthur-Fort William via North Central Airlines to Houghton-Hancock.

WHERE TO STAY

Rock Harbor Lodge and Windigo Inn operate from about June 20 to Labor Day. For information concerning accommodations, rates, and reservations, write to National Park Concessions, Inc. Winter address: Mammoth Cave, Ky. Sum-

Beavers cut this birch, Ma'am.

mer addresses: Isle Royale National Park, Houghton, Mich., for *Rock Harbor Lodge*; or Windigo Inn, Isle Royale, via Grand Portage, Minn., for *Windigo Inn*. Be sure to use *National Park Concessions, Inc.*, in addressing all such correspondence.

CAMPING AND CAMPGROUNDS

Camping at Isle Royale offers a delightful opportunity for those who truly love the outdoors. No road! No cars! You must hike or go by boat. The solitude of wilderness trails and vistas of wave-swept shores will be long remembered.

There are no regularly operated grocery stores or markets, which means that practically all provisions must be brought along on the initial trip. Limited supplies of foodstuffs may be purchased at Rock Harbor Lodge. But this source of supply is not conveniently located for campers, and to reach it may entail a considerable hike or journey by boat. Thus, a trip must be planned in detail if it is to be a success.

Be sure to bring first-aid materials, for it is a long trip from the park to a doctor's office. Be careful at all times, since even a minor accident can turn a happy outing into a dismal experience. Another caution, too, is to boil or treat all water, except from taps, and to have food with you that can be kept safely without refrigeration.

A good tent or shelter and adequate bedding are essential. Lightweight equipment is best for packing in. Mosquito netting and insect repellent will add to comfort.

Warm clothing is a must. Stout, comfortable footgear is best for the rough and often wet terrain. Strong, loose-fitting trousers and 8- or 10-inch boots are favored over high boots and breeches. A good windbreaker jacket that will resist snagging, a woolen sweater, and a sweatshirt will provide variety for changing temperatures. A lightweight, fold-away raincoat will be useful in sudden showers.

Choose a camping place that matches your interests. The one at Merritt Lane offers little for hikers, but is good for fishermen. Campsites near Rock Harbor are good for fishing and hiking. If cross-country hiking is what you want, any campground will do. The centerspread map shows the location of all campsites and connecting trails. All campsites are equipped with one or more Isle Royale shelters (three sides walled in, screened front with screen door, and a wooden floor). There are usually enough shelters for all campers, but be prepared to use your tent. When you arrive at the park, a park ranger will tell you which shelters are available. Each shelter site also contains a grill or fireplace with table and benches, and each campground has toilet facilities.

Charcoal or wood can be burned in the grills. Charcoal is available from the lodge concessioners and from the mail-and-supply boat out of Grand Portage. If you use wood, be certain to take only fallen dead wood. Cutting live wood is prohibited and cutting standing dead trees is extremely dangerous because vibrations may snap off upper limbs, seriously injuring anyone standing below. If you have gasoline stoves or lanterns, you must purchase the gasoline at one of the lodges at the island because **GASOLINE MAY NOT BE CARRIED TO THE PARK ON ANY COMMERCIAL BOATS.**

There is no charge for using campsites, but there is a limit of 15 continuous days at any one campsite. All shelters are on a first come, first served basis.

After choosing your campsite, you must plan how to get there. The *Ranger III* from Houghton docks at Rock Harbor Lodge; you will then have to get from the lodge to your camp-

site. If your campsite is at Daisy Farm you will need to hike 6½ miles or use a boat.

If you arrive via the *Isle Royale Queen II* from Copper Harbor or the *Voyageur* from Grand Portage, you can often arrange in advance with the boat operator to disembark directly at your campsite. (See under "Services" for a complete listing of transportation facilities within the park.)

It is impossible to predict weather or the prevalence of mosquitoes and flies. Normally, however, fog is common during June and sometimes during early July. Lake storms become more prevalent near September 1. Mosquitoes are most common in moist years in early summer, and black flies and deer flies become common in midsummer of some years. Modern insect repellents take care of these pests. Tent campers will find a mosquito net handy; shelters are screened in. There are no poisonous snakes or poisonous-to-the-touch plants in the park.

Lunch time in a secluded cove.

Upon arriving at the park, OBTAIN A FREE CAMPFIRE PERMIT from a ranger or naturalist on duty at one of the following stations: Mott Island, Rock Harbor Lodge, Amygdaloid Ranger Station, Windigo Ranger Station, or Malone Bay Ranger Station.

SERVICES

Transportation Within the Park

The privately owned *Isle Royale Queen II* from Copper Harbor will take campers to campsites at the northeast end of the park. Arrangements should be made in advance with Ward Grosnick, Copper Harbor, Mich.

The *Voyageur*, also privately owned, circumnavigates the park (usually clockwise) two or three times weekly from Grand Portage. You can board it at Rock Harbor Lodge and travel to Windigo, or vice versa; or you can arrange to have it pick you up at your lakeside camp for transportation to another point in the park or to Grand Portage. Arrange in advance by writing Sivertson Bros. Fisheries, 366 Lake Ave. So., Duluth 2, Minn.

A campers' boat service is offered by Rock Harbor Lodge to Daisy Farm, Moskey Basin, Tobin Harbor, and other more distant points. Rates vary with distance and number of persons. Guided excursions and trolling trips in motor launches are available at Rock Harbor Lodge and Windigo Inn.

Communications

Mail service is provided two or three times weekly from Grand Portage, Minn., to the post office at Rock Harbor Lodge. Address: Rock Harbor Lodge, Isle Royale National Park, Mich.

Telegrams may be sent and received at Rock Harbor Lodge, Windigo Ranger Station, or Mott Island Headquarters, via the National Park Service radio system, *if the message is urgent.* Incoming messages should be addressed to the terminal point desired, Isle Royale National Park, Houghton, Mich.

Medical Services

There are *no* regular medical services in Isle Royale National Park. Therefore, extreme care must be taken to avoid accidents. Those who knowingly have heart difficulty or some similar ailment should, in their own interest, consult their physicians before planning a visit. Often there are physicians among the guests at the lodges, and their services are always sought in emergencies; but their presence at the right place at the time of emergency is only coincidental. A plane or boat can carry injured or ill persons to Houghton where good medical services and a hospital are available . . . *if weather permits.*

Let's stay awhile.

NOTE: For information on navigation in the waters around Isle Royale National Park it is recommended that Coast Chart No. 981 or No. 98 be obtained from the U.S. Lake Survey Office at Detroit, Michigan, or from the U.S. Lake Survey Office at Buffalo, New York. A map showing the topography of the island in minute detail may be obtained from the U.S. Geological Survey, Department of the Interior, Washington 25, D.C. This map comes in a shaded-relief edition and in a forest-areas-in-green edition.

APRIL 1962 NP-IR-17000

Lodge Stores

Limited quantities of staple foods, films, pictures, post cards, candies, tobacco, and curios are available at the lodges. Those who will need large amounts of provisions or special supplies should bring them to the park.

Churches

Roman Catholic and Protestant services are held each Sunday morning at Rock Harbor Lodge. Protestant services are also held each Sunday evening.

A famous resident in typical pose.

TELLING THE PARK STORY

The park provides many programs and activities whose purpose is to help you get the most from your visit.

Programs are given at Rock Harbor Lodge every night at 8:30, with a different discussion topic each night. These talks introduce you to Isle Royale's geology, flora, fauna, and climate. Talks are given two or three times weekly at Windigo when enough visitors are present. Campers as well as lodge guests are invited.

Campfire talks are given two evenings per week at the Daisy Farm Campground. See the campground bulletin board for schedules.

Visitors traveling to the park on the *Ranger III* from Houghton, Mich., can attend the slide talk, "Introducing Isle Royale National Park," presented at about 2 p.m. each voyage. Offered on return trips of the *Ranger III* is another slide talk, "Previewing the National Parks and Monuments."

Naturalist-guided trips lasting about an hour start from Windigo Ranger Station 5 days weekly to coincide with the schedule of the *Hiawatha* from Grand Portage, Minn.

Similar naturalist-guided trips are offered daily at Rock Harbor Lodge to coincide with the arrival and departure of the *Isle Royale Queen II* from Copper Harbor, Mich. Two or three half- or whole-day naturalist-guided trips per week also start from Rock Harbor Lodge; schedules are posted on the lodge bulletin board.

Self-guiding trails are located near Windigo Inn and Rock Harbor Lodge. The Windigo Circuit Trail is marked by small interpretive signs. A pamphlet, "What to do at Windigo," is available on request at the Windigo Ranger Station. At Rock Harbor Lodge is the 4-mile-long "Albert Stoll, Jr., Memorial Trail," a self-guiding interpretive trail. Also at Rock Harbor Lodge is the very short, self-guiding "Commodore Kneutson Trail."

ISLE ROYALE ADVENTURES

Boating

Aside from hiking, boats are the only form of transportation at Isle Royale. Here is an excellent way to see the park.

Motor launch trips can be arranged at Windigo Inn or Rock Harbor Lodge in connection with trail trips, picnic parties, or sightseeing cruises.

If you own a small boat (20-foot or less), you can arrange to bring it to the park with you—but space for its transportation must be reserved in advance. U.S. COAST GUARD REGULATIONS PROHIBIT CARRYING GASOLINE ABOARD COMMERCIAL BOATS ACROSS LAKE SUPERIOR, SO IT MUST BE PURCHASED AT THE PARK

FROM WINDIGO INN OR ROCK HARBOR LODGE. Outboard mix as well as straight gasoline and oil are sold, but you must furnish your own gasoline-carrying cans.

Boats can be rented at Rock Harbor Lodge and Windigo Inn. Most of them are 16-footers and can be used either as rowboats or with outboard motors. To assure yourself of a rental boat during heavy visitation in the park, it is best to reserve one in advance. Outboard motors are not rented at the park, so you must bring one from the mainland. Fifteen-horsepower motors are the maximum size permitted on rented boats.

The Marina at Rock Harbor Lodge is open from about June 20 until about Labor Day. Dock rental facilities include electrical and fresh-water hookups for boats equipped to use them.

BOAT RULES AND SUGGESTIONS

1. Know as much as possible about your outboard engine: How to change a shear pin or spark plug, for example, and how long you can expect to run on a gallon of gasoline. Do you have extra shear pins and plugs? And the proper tools to work with?
2. There must be a pair of oars in each boat whether or not an outboard motor is used (oars furnished with rented boats).
3. There must be one life preserver for EACH person in the boat (furnished with rented boats).
4. Outboard motors are prohibited on all inland lakes and streams in the park.
5. No boats of the type generally called "houseboats" are permitted in park waters.
6. You should have a compass of some kind and know where in the boat it will work properly (NOT furnished with rented boats). Because of sudden fogs, you should know your location at all times so that you could get to shore by using your compass.
7. It would pay off in safety and enjoyment to obtain Lake Survey Chart No. 981. This chart shows Isle Royale, the names of all harbors and bays, and which waters are and are not safe for boating. (Order from U.S. Lake Survey, 630 Federal Building, Detroit, Mich. Price: \$1.)
8. You must use running lights when boating after sundown. Check Coast Guard regulations for the proper lights.
9. Also see Coast Guard regulations regarding fire extinguishers. The "dry chemical" type is recommended.
10. All boat owners should acquaint themselves with Public Law 85-911, the Federal Boating Act of 1958.
11. Do not dump garbage, litter, oily waste, or gasoline into park waters. *Lake Superior is your water supply.*
12. In Isle Royale National Park, docks may be found at all lake-side camps, ranger stations, lodges, and commercial fishing sites. Go slow past such areas so that your wake does not damage boats moored at these docks. Also, when tying up at a dock, prevent damage to your boat by leaving slack in the lines so that the boat rides relatively free in the water. If you must moor where there is no dock, pull your boat all the way out of the water or anchor it away from shore; a partially beached boat may be seriously damaged by wave or wake action.
13. Canoes, except for inland lakes and well-sheltered waters, are not favored because the waters of Lake Superior are not generally

←Land and water in timeless strife.

suited for canoeing. Portaging between inland lakes and between bays and harbors is limited to two major routes: (1) McCargo Cove to Chickenbone Lake to Lake Livermore to Lake LeSage to Lake Richie, then either to Lakes Intermediate and Siskiwit or to Chippewa Harbor; (2) Duncan Bay to Five Finger Bay to Lane Cove to Herring Bay, then to either Amygdaloid Channel or McCargo Cove. Portaging on the first route is difficult, and there are no regular portaging trails. The second route provides short, easy portages. Be sure to consult a park ranger before attempting any of these trips.

14. Whenever you go out on a boat or canoe trip, especially if you plan an overnight outing, obtain a campfire permit.

Above all, you are cautioned against overloading your boat, and are urged to observe all possible safety precautions. And, if you are not an experienced boater, stay in sheltered waters.

Navigating Across Lake Superior to the Park

Recently two persons drowned and two almost drowned using small boats to get to Isle Royale. In general, if your boat is 20 feet or less, bring it to Isle Royale aboard one of the boats listed under "Getting to the Park." If you do navigate across Lake Superior, be sure you have proper equipment and skill to use it, and proper knowledge of the lake; and be sure to get all the latest marine weather forecasts before you start out. Remember! Lake Superior is an inland sea.

Swimming

Isle Royale is not considered a good swimming area because: (1) The waters of Lake Superior are cold—ranging from 35° to rarely over 60° during warmest periods; (2) waters of some inland lakes, though warm enough during middle and late summer, contain bothersome (but harmless) leeches; and (3) sand beaches are almost nonexistent. For those who brave these obstacles: Be careful in rocky areas—do not dive in head-first; don't stay too long in the cold water—about 10 to 15 minutes is all the body can stand; and carry salt to remove leeches.

Only the very experienced should attempt skin diving. You MUST obtain a special park permit before doing so.

Hiking

Isle Royale is laced by more than 100 miles of foot trails. Primitive, but well marked, they invite you to inland lakes, historic mine ruins, geological landmarks, campgrounds, and fire-lookout towers.

The Greenstone Ridge Trail, extending 34 miles from Rock Harbor to Washington Harbor, provides the longest hike through the interior. Side trails enable you to explore many harbors and lakes. Plan several days for this trip, which offers fine lake fishing, opportunities to see varied plant and animal habitats, and broad vistas. Hikers can camp at Lakes Chickenbone, Hatchet, and Desor along this trail. Because the Greenstone Ridge Trail hike is quite an accomplishment, a jacket

patch is available for those who make the trek from Rock Harbor Lodge or Daisy Farm to Windigo, or the reverse trip.

A number of combination trips, by boat one way and trail the other, can be arranged with the lodges or commercial carriers.

In planning hiking or camping trips, you are urged to get precise directions at park headquarters or a ranger station, where you can also get the required campfire permit. All hikers should read the section, "Camping and Campgrounds."

Fishing

Park waters are open to fishing under National Park Service regulations; copies are available at park headquarters. No fishing license is required.

More than 30 inland lakes contain game-fish species. Pike and perch are common in most of them, with walleyes included in Chickenbone, Dustin, and Whittlesey. In Siskiwit, whitefish and lake trout are taken also. No boats are available on the inland lakes. Fish may be caught from shore, but inflatable rafts, canoes, or wading boots are recommended.

Isle Royale has about 25 miles of trout-fishing streams. The major ones are Tobin, Washington, and Grace Creeks, and Little and Big Siskiwit Rivers. Brook trout is the main species taken, with some rainbow.

About 50 kinds of fish exist in Isle Royale waters. Some species found in the inland lakes are unique to these waters. Among these are Lake Desor whitefish and cisco, and Sargent Lake cisco. Lake trout are taken in Lake Superior by trolling over reefs and along the shore. Harbors also offer brook and rainbow trout, and northern pike.

Fishing tackle is furnished by the guides on guided trips, or it may be bought at Rock Harbor Lodge or Windigo Inn from the concessioner.

WHAT TO BRING AND WEAR

Nights are cool, and day temperatures rarely rise above 80°, so bring warm clothes. Lake outings require a heavy sweater or coat. Hiking clothes and comfortable walking shoes are appropriate for camping, boating, and fishing. Lodge accommodations are informal, so you will feel at home in casual clothes.

Opportunities for photography are excellent. So take your cue, camera fans. Binoculars are handy for close observation of wildlife and for distant views. Dark glasses are advisable when on the water or along the lake shore.

THE FORMATION OF ISLE ROYALE

The rocks of Isle Royale were formed about 1,200 million years ago. They are principally old lava flows, interbedded

with river-deposited sandstone and conglomerate. Originally horizontal, these rock beds bent downward long ago to form the great basin now occupied by Lake Superior. Isle Royale is on the northwest rim of this basin.

Within the last million years, the continental glaciers of the Ice Age overwhelmed and reshaped the Superior Basin. In doing so, they buried Isle Royale beneath a mile-thick sheet of ice. They ground smooth the surfaces of its rocks and gouged out the basins now occupied by Isle Royale's lakes.

During the melting and retreat of the glaciers, the waters of Lake Superior stood for long periods at higher levels than they do today. This was so because the glacial action had altered the system of outlets that drained the Great Lakes and because the earth's crust, depressed by the enormous weight of the ice sheet, took time to rebound upward. During part of this period, Isle Royale was completely submerged. As each lower outlet for the Great Lakes was opened and as the land surface rebounded, the waters of Lake Superior dropped to new levels. Shoreline gravels, deposited along the cliffs of Isle Royale, record various levels at which the lake waters halted for a time.

The rock beds on the island slope southeast into the lake basin. These layers pass under the lake and appear again on the Michigan shore, where they bear the rich copper deposits of Keweenaw Point. They are known as Keweenaw rocks.

On the island, the edges of the softer rocks have eroded into valleys that extend its full length. Between these valleys, the harder rock beds form long ridges, with Greenstone Ridge dominating. The upper surface of the gentle southeast slope of this ridge is a bed of basalt (a hard, lava-formed rock), and its steep northwest face is the eroded edge of this same bed. The other parallel ridges are similar in form.

FORESTS AND WILDFLOWERS

Isle Royale's location and topography make possible an interesting and varied plantlife. The short summer growing season is typical of the northern clime. For those who love flowers and like to study and identify them in natural habitats, Isle Royale offers several hundred species of wildflowers. They are growing undisturbed . . . save them for others to enjoy.

Among the flowers of Isle Royale, bunchberry dogwood carpets wide areas; in the dense woods are common pipsissewa ("princespine"), twinflower, trillium, and pyrola. The spectacular devilsclub grows on the very northeastern end of Isle Royale, hundreds of miles east of its familiar range in the Pacific Northwest. Saprophytes—plants living on decayed vegetation—are common, including the Indian-pipe ("ghost-flower"). Present everywhere is a wide variety of ferns, lichens, mosses, and fungi. In season the fruits of many plants—blue-

berry, raspberry, strawberry, thimbleberry, sugar plum—are abundant, affording tasty pickings for the hiker and camper.

Coniferous (cone-bearing) and deciduous (leaf-dropping) forests meet on Isle Royale and form an outstanding example of forest transition. The deciduous hardwoods are located in the interior upland section of Isle Royale. Most common are sugar maple and yellow birch; associated trees include red maple, bigtooth aspen, northern red oak, and white pine.

The coniferous evergreens are especially well developed along the shores of the island where Lake Superior produces the cool, moist climate favorable to them. Most common of the conifers are white spruce and balsam fir; and in association are paper birch, quaking aspen, mountain-ash, and jack pine.

WILDLIFE

A 45-mile expanse of water separates Isle Royale from the nearest Michigan shore; Canada is 15 miles away. The island now has only those species of wildlife that have been able to fly, swim, or drift across this water barrier, or cross the ice which occasionally forms a bridge from the Canadian shore.

Beaver, muskrat, mink, and weasel are common, as are red squirrel, snowshoe hare, red fox, wolf, and moose. Some common mammals barred from Isle Royale by the water barrier are deer, bear, porcupine, and skunk.

Moose are commonly seen along streams or on the shores of inland lakes and harbors. They were not on the island before 1900, but when the lake froze across to Canada in 1912, a number of moose may have ventured over the ice. Since then they have flourished on Isle Royale.

The park is a rewarding area for bird observation and study. More than 200 species have been listed, including the bald eagle, osprey, pileated woodpecker, about 25 kinds of warblers, and most common of all—the herring gull.

ANCIENT MAN

Long before Europeans arrived in this country, Isle Royale was visited by prehistoric Indians. They sought copper, occurring in nuggets or large masses along the shores and in the bedrock. Their method of mining is revealed by the great number of ovalshaped hammerstones and pieces of partially burned wood found in pits scattered about the island. Fire may have been used to heat the copper-containing rock, which was then cracked by dashing cold water upon it; finally, hammerstones were used to separate the copper from the fragmented rock.

Radio-carbon age tests by archeologists show that the mining pits date back 3,800 years or more. When European explorers first observed them they were filled with debris. By that time,

too, local Indians appear to have forgotten the pits and who had made them. A few artifacts—arrowheads, knives, cedar shovels, and fragments of pottery—have been found, suggesting that these miners were the ancestors of present Algonquian and Siouan tribes. Artifacts fashioned in native copper from the Lake Superior shores, including Isle Royale, have been found from the Southeast to the Great Plains, giving evidence of the active trade carried on by these early people.

MODERN MAN

Isolated as Isle Royale appears even today, it has been known and visited since early in American history. French explorers knew Lake Superior shores by the time the Pilgrims landed on New England's rocky coast. A book and maps printed in the 17th century referred to the island, then called Minong, on which there was a mine of copper. The French took possession of the island in 1669 as part of the Canadian territory, naming it Isle Royale in honor of King Louis XIV.

Fur trading lured the French to this area. They found the Grand Portage route, which, leaving Lake Superior, follows the present border-lakes country of northern Minnesota to the broad Northwest. Under the British, Grand Portage became a great fur-trading center, rivaled only by the Hudson Bay entrance to the north country. The beginning of this great carrying place is present-day Grand Portage, Minn. Just 20 miles west of Isle Royale, it is one of the National Monuments administered by the National Park Service.

The American Fur Company operated at Grand Portage after United States occupancy, trading in fish as well as furs. In the early 1800's this company established fisheries on Isle Royale at Washington Harbor, Siskiwit Bay, and Belle Isle. The first American ship built on Lake Superior, the *John Jacob Astor*, named for the founder of the company, was launched in 1835 at Sault Sainte Marie to serve the fisheries and fur trade.

The Mining Era

Isle Royale was Indian territory until 1843 when, by treaty with the Chippewas, it was ceded to the United States. Prospectors stampeded to the island and started many mining ventures. Some notable pieces of copper were found. Among them was a mass weighing 5,720 pounds, which was exhibited at the Philadelphia Centennial Exhibition in 1876. Mineral explorations continued until 1899, when the last mine was abandoned. The ruins of these mining ventures are in evidence at several places on Isle Royale. While the copper available had been adequate for the ancient Indians, it was not found in sufficient concentration for modern industrial needs.

Isle Royale Becomes a National Park

When the miners departed, the tourists arrived. Soon Isle Royale was a favorite summer retreat from the hot inland cities.

One of the visitors—Albert Stoll, Jr., of the *Detroit News*—was captivated by the island's beauty. He started the movement that led to Michigan Congressman James C. Cramton's proposal in 1922 that Isle Royale be made a National Park.

Establishment of Isle Royale and the surrounding islands as a National Park was authorized by Congress in 1931. The State of Michigan then acquired all privately owned lands and donated them to the Federal Government. The park was formally established on April 3, 1940. It now comprises more than 800 square miles of land and water.

OTHER PUBLICATIONS

For sale at the park by the Isle Royale Natural History Association are a number of publications of interest. Those who wish to purchase these through the mail should request a publication list by writing: Isle Royale Natural History Association, Isle Royale National Park, Houghton, Mich.

A map of Isle Royale is available from the Washington Distribution Section, Geological Survey, U.S. Department of the Interior, Washington 25, D.C. There are two editions: The forest-areas-in-green edition and the shaded relief edition. The price is \$1.50 per copy. These are sold in the park during the visitor season at ranger and information stations, but cannot be sold by mail from the park at any time. For the Lake Survey Chart of Isle Royale waters, send \$1 to U.S. Lake Survey, 630 Federal Bldg., Detroit, Mich.

ADMINISTRATION

Isle Royale National Park is administered by the National Park Service, U.S. Department of the Interior. A superintendent, whose address is Houghton, Mich., is in immediate charge.

Mainland headquarters for the park are at Houghton. From May 1 to November 1, headquarters are on Mott Island.

Park rangers are the protective force of the park. They are on duty to enforce park regulations, and to help and advise you. Consult them if you are in any difficulty. Ranger stations are located at Mott Island, Windigo, Amygdaloid Island, Malone Bay, and Rock Harbor Lodge. You are also welcome to visit the fire-lookout towers shown on the map.

Park naturalists, who also wear the Park Service uniform, are the interpreters of the park and will welcome any opportunity to help you understand the park features. Naturalists are located at Rock Harbor, Windigo, and Mott Island.

PRESERVATION OF THE PARK

Park regulations are designed to protect the natural beauty of the park and to aid you in enjoying it. The following synopsis is for your guidance:

Fire—the park's greatest peril. Kindle fires only in designated campgrounds and never on roots of trees or near deadwood, moss, dry leaves, or mold. Campfires are not to be left unattended. Before leaving your fire, extinguish it to the last spark. Don't take chances. *Make sure your fire is out.* During periods of high fire danger the superintendent may prohibit the kindling of fires.

Keep the park clean. Whenever possible burn garbage in your campfire. Place cans and residue in containers where provided; where there are no collection points, as in the back country, pack all non-combustibles out. Keep your camp clean. Do not dump refuse or garbage near the docks, or in the lakes and streams of the park. *Lake Superior is the source of the drinking water supply for the park.*

Trees, flowers, animals, natural features. Destruction, injury, or disturbance in any way of trees, flowers, birds, or other animals is prohibited; however, fallen dead trees may be used for firewood, unless fuel is available from other sources. Removal of artifacts, geological specimens, beachstones, plants, trees, or flowers is prohibited.

Dogs, cats, and other pets are prohibited in the park unless under physical restraint at all times. Pets are not permitted aboard commercial boats sailing to Isle Royale.

Registration. All parties traveling in their own boats, or camping, are requested, upon their arrival, to register at park headquarters on Mott Island, or at any ranger station.

Firearms. Unless adequately sealed, cased, or broken down to prevent their use while in the park, firearms are prohibited, except upon written permission from the superintendent.

Boats. Regulations prescribed by the U.S. Coast Guard govern use of boats operating in waters of Lake Superior.

Customs. Deputy customs officers are located at Rock Harbor, Mott Island, and Windigo. All boats returning from Canada should check in immediately at one of these stations.

MISSION 66

MISSION 66 is a program designed to be completed by 1966 which will assure the maximum protection of the scenic, scientific, wilderness, and historic resources of the National Park System, in such ways and by such means as will make them available for the use and enjoyment of present and future generations.
