National Monument

Park Trails - "Walks Through Time"

All three units of the monument have trails, overlooks, and picnic areas. Most of the trails have interpretive exhibits. While hiking, help protect the natural features of the park by staying on the established, marked trails. Your pets may join you on the trails, but keep them on a leash. All monument parking areas can be accessed with vehicles the size of large buses. Trailhead picnic areas have tables, restrooms, and water during fair weather seasons (usually April – October).

Please remember that removal or disturbance of any natural or cultural resources within the monument is prohibited. You can be stewards of your own park, so if you see anything that concerns you, please record significant details and report your sighting to the park staff.

North is at the top of all maps

Trails are open all year but may be impassable during wet weather, due to mud. Sturdy footwear is recommended. In the summer, please carry water and wear some sort of sun shield.

Snakes, including rattlesnakes, are sometimes seen along the trail. Observe them, leave them alone, and give them room. This is their home.

CLARNO UNIT [18 miles west of Fossil, OR, on Route 218]

The Palisades trailhead is located 1/4 mile west of the picnic area along Highway 218. The three trails listed below begin from the trailhead parking area. Stops along the trails have interpretive signs explaining the landscape and unseen aspects of the resource.

Trail of the Fossils [1/4 mile hike] – This is the only trail in the park where one can readily see fossils in the rocks. Large boulders strewn below The Palisades cliff contain hundreds of visible plant fossils from jungle-like forests that blanketed the region about 44 million years ago.

Clarno Arch Trail [1/4 mile hike] – A moderate climb will bring one to the base of the Palisades cliff directly under a natural arch cut into the cliff by erosion. Petrified logs are visible in the cliff face.

Geologic Time Trail [1/4 mile one way] – This trail connects the picnic area and trailhead area, leading one below the Palisades cliff. The trail symbolizes a timeline. Signs along the way note pre-historic events of the last 50 million years. Each foot of trail represents 37,000 years. The trail may be started from either end, going backward or forward in time.

Please remember that collecting rocks, fossils, plants or animals, in the park is prohibited.

PAINTED HILLS UNIT [west of Mitchell, OR, off of Route 26]

Carroll Rim Trail [begins from the Painted Hills Overlook, 1 ½ mile hike] – The trail ascends a few hundred feet in elevation to rimrock that overlooks the entire region, with a bird’s-eye view of the Painted Hills. A bench to relax and enjoy the view is at the end of the trail.

Painted Hills Overlook Trail [begins at the Painted Hills Overlook, 1/2 mile hike] – This trail provides glimpses of the colorful Painted Hills from several angles. Benches are along the trail.

Painted Cove Trail [1/4 mile hike] – With a multitude of colors, this trail is like a giant artist’s palette. Here, one can actually walk among the red and gold claystone hills along a boardwalk accessible to those in wheelchairs. Bring your camera! Interpretive signs illuminate the geologic story.

Leaf Hill Trail [1/4 mile hike] – Accessible to those in wheelchairs, this drab looking hill was the scene of important scientific studies in the 1920’s and 1990’s. Thousands of leaf fossils found here helped give us our first glimpse of an ancient ecosystem 33 million years in age. A few fossils are on exhibit.

Please remember, collecting fossils, rocks, plants or animals, in the park is prohibited.

SHEEP ROCK UNIT [near Dayville, OR, at the intersection of Routes 26 & 19]

Flood of Fire Trail [begins at the Foree Area located 7 miles north of the Thomas Condon Visitor Center, 1/4 mile hike] – This gently ascending trail leads one to a grand viewpoint of the river valley from atop a steep cliff. **CAUTION: Be careful near the cliff edge.**

Story In Stone Trail [begins at the Foree Area, 1/4 mile hike] – This trail, accessible to those in wheelchairs, features touch exhibits with replica fossils. The trail offers short and long-range views of colorful landscapes.

Blue Basin Overlook Trail [begins at the Blue Basin Area located 3 miles north of the Thomas Condon Visitor Center, 3 mile hike] – Climbing several hundred feet to the upper rim of Blue Basin, this trail provides one with scenic views down into the basin and grand views of the John Day River Valley. This is the park’s longest trail.

Island In Time Trail [begins at the Blue Basin Area, 1 mile hike] – This gentle trail ascends along the bottom of a basin of blue-green badlands, which scientists have prospected for fossils since the late 1800’s. Exhibits and fossil replicas tell the story of these remarkable exposures on this popular trail.

River Trail [begins at the James Cant Ranch parking lot, ½ mile hike] – Accessible to those in wheelchairs, this trail leads one down to the John Day River. Trail exhibits feature the current natural and cultural surroundings.

Sheep Rock Overlook Trail [begins at the James Cant Ranch house, ½ mile hike] – Starting at the front gate, this trail ends at an overlook with a great view of the valley.

Thomas Condon Overlook Trail [begins at the Thomas Condon Visitor Center, ½ mile hike] – This trail ends at an overlook with a great view of the valley. It begins at the south end of the parking lot.

Mascall Formation Overlook [one mile south of Picture Gorge off of Route 26, 300’ hike] - Grand views of the John Day Valley and Picture Gorge await one here. Exhibits along a short trail feature both prehistory and human history.
