INTRODUCTION

Beginning in 1872, with the establishment of Yellowstone National Park, the United States has evolved a system of national parks and related areas. To correlate their administration, the Congress by act approved on August 25, 1916, established the National Park Service as a bureau of the Department of the Interior and directed it to conserve the scenery and the natural and historic objects and the wildlife in the national parks, monuments, and reservations, and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.

A "Magna Carta" of park use is embodied in the Yellowstone National Park act of March 1, 1872. That act dedicated and set apart the Yellowstone region as a "public park or pleasuring ground" for the benefit and enjoyment of the people, and made mandatory the preservation, from injury or spoliation, of all timber, mineral deposits, natural curiosities, or wonders within the park and their retention in their natural condition. It also provided for the protection of fish and game in the park against wanton destruction or capture or destruction for the purpose of merchandise or profit. The act of 1916 establishing the National Park Service clarified and reinforced these policies.

The establishment of national monuments dates from June 8, 1906, when the Congress authorized the President to set aside as national monuments, by public proclamation, lands owned or controlled by the United States containing historic landmarks, historic and prehistoric structures, and other objects of historic or scientific interest.

By Executive Order of June 10, 1933, President Roosevelt consolidated under the National Park Service the administration of all national parks, monuments, and related historical reservations, many of which previously had been administered by other agencies. These included national military parks, battlefield parks and sites, memorials, certain military cemeteries, and the National Capital Parks.

The National Park System as of June 30, 1944, included 169 areas. In addition, under a cooperative agreement with the Bureau of Reclamation of the Department of the Interior, the National Park Service administers the Boulder Dam National Recreational Area. It also administers 18 recreational demonstration areas until they can be transferred to the States in which they are located or until some other disposition is made of them.

The Historic Sites Act of August 21, 1935, provided for preservation, for public use, of historic sites, buildings, and objects of national significance for the inspiration and enjoyment of the people of the United States. To date, 16 national historic sites have been designated, 10 of which are owned by the Federal Government and 6 by private organizations.
