

Petrified Forest

National Park Service
U.S. Department of the Interior

Petrified Forest National Park
Arizona

Common Animals

Although Petrified Forest is best known for its fossil clues to an ancient environment, it is also a living Park. Despite its seemingly barren appearance, Petrified Forest National Park supports hundreds of animal species. In this often demanding environment, animals have adapted many behavioral and physical means of survival. For example, black-tailed jackrabbits very long ears are radiators, helping to cool the animal during the heat of summer. Other creatures only come out in the relative cool of morning and evening. Some animals migrate or hibernate to escape the cold of winter. Keep your eyes open and watch for signs of the many animal species, large and small, that make Petrified Forest their home. (Bird information is available in the park Bird Checklist.)

Amphibians

Couch's spadefoot

Can you imagine living underground for nine months of the year and not eating, drinking, or defecating? An amazing group of animals do just that—amphibians. It's hard to imagine that in this dry region animals that require consistent moisture could thrive. Permeable skin allows amphibians to live in Petrified Forest. Amphibians do not drink; instead, they absorb water through their skins. Spadefoot toads, residents of the park, absorb water from the soil in which they hibernate. Although permeable skin allows for water absorption, it provides little barrier to evaporation. This causes amphibians' water balance to be in constant flux. Evaporative water loss also results in loss of body temperature. This is why you often see amphibians on warm pavement in the evening. It is not an easy life for amphibians in this dry grassland.

Ambystoma tigrinum Tiger Salamander
Anaxyrus (Bufo) cognatus Great Plains Toad
Anaxyrus Bufo punctatus Red-spotted Toad
Anaxyrus (Bufo) woodhousii Woodhouse's Toad
Scaphiopus couchii Couch's Spadefoot
Spea multiplicata Mexican Spadefoot (formerly *Scaphiopus multiplicata*)
Spea bombifrons Plains Spadefoot

Tiger salamander

Reptiles

Collared lizard

Well adapted to the often dry environment of the region, reptiles play an important part in maintaining the health of the ecosystem. Over sixteen varieties of lizards and snakes make Petrified Forest their home. Reptiles occupy a variety of habitats ranging from grassland to rocky slopes. They consume large quantities of insects, spiders, scorpions, other reptiles and small mammals, thereby preventing infestations of any single species. Respecting the entire reptile community helps preserve this balance.

Snakes

Arizona elegans Glossy Snake
Crotalus viridis viridis Prairie (Hopi) rattlesnake
Hypsiglena torquata Nightsnake
Lampropeltis getula Common Kingsnake
Lampropeltis triangulum Milksnake
Masticophis taeniatus Striped Whipsnake
Pituophis catenifer Gophersnake
Thamnophis cyrtopsis Black-necked Gartersnake

Lizards

Aspidoscelis pai Pai Striped Whiptail (formerly *A. inornatus* Little striped whiptail)
Aspidoscelis neomexicana New Mexico Whiptail
Aspidoscelis velox Plateau Striped Whiptail
Crotaphytus collaris Eastern Collared Lizard
Holbrookia maculata Lesser Earless Lizard
Phrynosoma hernandesi Greater Short-horned Lizard (formerly *P. douglasii* Short-horned lizard)
Sceloporus graciosus Sagebrush Lizard
Sceloporus tristichus Plateau Lizard (formerly *S. undulatus* Eastern fence lizard)
Uta stansburiana Common Side-blotched Lizard

Rattlesnake

Mammals

Coyote

Pallid Bat

White-tailed antelope ground squirrel

Invertebrates

White-lined sphinx moth

Tarantula

Pillbug

Taking Care of Wildlife

Mammals are a diverse group of animals, ranging from the delicate white-footed mouse to the elegant mule deer. Mammals have fur or hair, produce milk for their offspring, and are warm-blooded. To live in the often extreme climate of the plateau country, mammals utilize survival strategies such as hiding in their

Canis latrans
Urocyon cinereoargenteus
Vulpes velox
Lynx rufus (Felis rufus)
Odocoileus hemionus
Antilocapra americana
Bassariscus astutus
Procyon lotor
Taxidea taxus
Mephitis mephitis
Spilogale gracilis
Lepus californicus
Sylvilagus audubonii
Notiosorex crawfordi
Antrozous pallidus
Corynorhinus townsendii
Myotis californicus
Myotis thysanodes
Myotis yumanensis
Pipistrellus hesperus
Erethizon dorsatum
Cynomys gunnisoni
Ammospermophilus leucurus
Spermophilus pilosoma
Spermophilus variegatus
Thomomys bottae

 House mouse

burrows or migration, as well as physiological adaptations, like hollow hairs for insulation. Many of the mammals found in Petrified Forest National Park are rodents, a principal prey for predators of the region. Early morning is the best time to view mammals while in the park.

Desert cottontail rabbit

American pronghorn

Ord's kangaroo rat

Crustaceans

Pillbug (Isopod)

Arachnids

Aphonopelma spp. Tarantula
Lycosa spp. Wolf spider
Latrodectus hesperus Western black widow
Centruroides exilicauda Arizona bark scorpion
Hadrurus arizonensis Giant hairy scorpion
Eremobates spp. Solpugid, windscorpions

Myriapods

Orthoporus ornatus Desert Millipede
Scolopendra heros Giant desert centipede
Scutigera coleoptrata House centipede

Millipede

Invertebrates include far more animals that can be listed here. Arthropods—one of the most diverse groups of creatures in the world—consist of such animals as spiders, crustaceans, and insects. Please remember that even these “bugs” have their place in the environment, often one of great importance. Invertebrates enrich the soil, decompose, and control pests. This is just a tiny sample of the many invertebrates in the park.

Insects

Pepsis and *Hemipepsis* spp. Tarantula hawks
 Praying mantids (Order Mantodea)
Bombus sonoratus Bumblebee
Dasymutilla spp. Velvet ant
Ascalapha odorata Black witch moth
Battus philenor Pipevine swallowtail butterfly
Hyles lineata White-lined sphinx moth
Vanessa cardui Painted lady butterfly
Eleodes spp. Pinacate beetle
Parabacillus spp. Stick Insect

Only a fraction of animals found in the park are listed in this publication. Birds are not included here, having their own checklist.

National parks create oases of protection for many species of animals. Do not approach, feed, or harass any wildlife in Petrified Forest or any other national park area.
