

The Rincon Mountain District (RMD) of Saguaro National Park is ecologically diverse—a quality that is reflected in this bird list of over 200 species. The Rincon Mountains are part of the Madrean Archipelago of “Sky Islands,” where the Rocky Mountains of the U.S. meet Mexico’s Sierra Madre Occidental. The ranges of many subtropical plant and animal species (e.g., sulphur-bellied flycatcher, elegant trogon) reach their northernmost extent here. The RMD also lies at the interface of the Sonoran and Chihuahuan deserts and includes biological elements from both. Biodiversity in this district is further enhanced by an elevational gradient of almost 6,000 feet, from the desert (2,700') to evergreen forests (8,666') atop Mica Mountain.

Six successive biomes occur here, grouped into four habitats (H) for the purposes of this bird list. Sonoran desert (D) is characterized by saguaros and other cacti and perennial shrubs. Woodland/chaparral (WC) includes grasslands, brushlands, and oak and juniper woodlands. Forests (F) include pine and mixed conifer. Associated with water, riparian vegetation (Ri) such as cottonwood and willow, is found in the drainages of each of all these habitats, creating further complexity and diversity.

In this list, season (S) includes year-round residents (Y); summer breeders (S; usually neotropical migrants here between April and August); winter visitors (W) here from November through February; and migrants (M) passing through in spring or fall.

Habitat and season both affect abundance (A). In the right habitat and season, abundant (A) birds are likely to be seen daily and in large numbers. Common (C) birds are likely to be seen daily in fewer numbers. Uncommon birds (U) are seen less frequently but regularly, and rare (R) birds, though usually present, are difficult to find. Occasional (O) birds are transient—found regionally, but not usually present in the park. Accidental (X) birds are far out of their normal range (and may never be seen here again).

The information in this list is based on many years of bird observations and surveys throughout the Rincon Mountain District of Saguaro National Park. However, with changing land use and climate, bird lists are inherently works in progress. Use this list as a guide, and report your own observations (to the RMD Visitor Center or on eBird) to help us revise future versions. The list is arranged by family, with common names following the American Ornithologists' Union's Check-list of North American Birds, 7th edition, and its supplements to 2013.

This checklist was produced by Saguaro National Park and the Sonoran Desert Network.
