

# **SERIAL NUMBER RANGES FOR** **SPRINGFIELD ARMORY-MANUFACTURED** **MILITARY FIREARMS**

**(Including the "Trapdoor" Springfield, the Springfield "Krag," the Springfield M1903, the M1 Garand [by all makers], and the M14, as well as the M1911 automatic pistol. Included, also, are the US "Enfield" M1917 rifles, the M1911A1 automatic pistol, and Luger pistol M1900 American Eagle Second Issue.)**

\*note: before 1865, serial numbers were not given to National Armory weapons. Production at Springfield Armory shoulder arms began with the Model 1795 flintlock musket. Springfield Armory was closed by the U.S. government in 1968 as a cost-cutting measure.

1904	-	17,354	460408	-	477762

LCol. Brophy, in his book *The Krag Rifle*, claims that the .22 Gallery Practice Rifles were newly manufactured weapons. If so, adjust serial numbers accordingly. Of the 841 .22's manufactured, 500 were made in 1905 and 341 made in 1906. If Brophy is correct, then the highest possible serial number that could appear on a U.S. Krag-Jorgensen is 478694.

M1905 GALLERY PRACTICE RIFLE .22RF 200 MANUFACTURED

Notes: Magazine modifications for the clip fed Parkerhurt device are in the 288270 to 289155 serial number ranges.

The entire 10 year production period is marked by numerous modifications as to, sights, stock fittings. Many early models were recalled to SPAR for such changes.

The Philippine Constabulary carbines were all (mostly) converted at Benicia Arsenal, California.

The 1905 Gallery Practice rifles caliber .22 were in the serial number range 476000 to 4765000. 86 of these receivers are positively known to have been destroyed.

Most of the 1898 converted carbines were modified to the 1899 Long Stock model.

## ◆ SMITH CORONA PRODUCTION OF M1903A3

1943-3608000-3707999  
1944-4708000-4992000  
TOTAL: 234000

On 18 January 1943 Remington directed to divert from production 20,000 M1903A3 rifles for conversion to the U.S. Rifle M1903A4 (Sniper's). Rifles #3407088-3427087 (from the first "block" of numbers) were diverted, and the first "03-A3" converted was delivered in February 1943.

On 20 June 1943 an additional 8,365 M1909A4 rifles were ordered. "Block" for these rifles and possible future orders was 4922001-5784000. After this block had been used to 4997045, receiver marking was changed to "03-A4" and a new series of numbers begun with Z4000000.

The second "block" of "03-A3" numbers was used only to about 4168800 before cancellation of contract ended "03-A3" production 28 February 1944. In March 1944, with receiver Z4002290, production of the M1903A4 was ended. Total production was 1,056,276 rifles, which included about 345,000 M1903 and M1903 (modified), about 711,276 M1903A3, and just 26,653 M1903A4 (short of the 28,365 ordered)

5488847-5793847 Harrington & Richardson  
5793848-6099905 Springfield Armory

Winchester's serial-numbering system appears to have changed in January 1945. This seems to be about the time W.R.A. switched from 2.5 million serial numbers to 1.6 million. These are often referred to as WIN-13 rifles. The 2.5 million numbers stopped in the area of 2,535,XXX which places it about 39,000 rifles from the end of production in June 1945. It is believed that approximately 40,000 WIN-13 rifles were produced. In addition, rifles in the 1.6 million serial number range have been observed ranging from number 1,602,XXX through 1,639,XXX. All of this supports the January 1945 date for the serial number range change.

**LUGER PISTOL M1900 AMERICAN EAGLE SECOND  
ISSUE 7.65MM U.S. ARMY TRIALS**

The listed serial number represent 770 pistols purchased by Bannerman & Sons from the United States Government Arsenal at Springfield Armory in 1906. These are the only documented specimens of trial pistols issued by the U.S. Army from 1901-1905. The original order from Deutsche Waffen und Munitionsfabriken, Germany was for 1000 pistols. The 230 pistols whose serial numbers are not shown were probably rendered useless in various tests. It is quite possible however that a small number of these unrecorded specimens came into private hands.

6176-6196

6282

6361-7108

7147

There is no definite marking employed by the United States Government which will positively identify these pistols. Any stamped letters, numbers or ordnance type flaming bombs found on the frame or receiver can not be attributed to any United States government agency. If a M1900 American Eagle, second issue pistol is suspected of being a trial specimen it will have the following characteristics:

1. Serial number range 5800 to 7800.
2. The word Germany will not appear on the pistol.

### **M1902 LUGER PISTOL 9MM**

The introduction of the 9mm cartridge caused the purchase of at least five additional pistols.

10030B - a prototype specimen

10060 - a prototype specimen
