NPS Form 10-900
(Rev. 10-90)

OMB No. 1024-0018

United States Department of the Interior
National Park Service

NATIONAL REGISTER OF HISTORIC PLACES
REGISTRATION FORM

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in how to complete the National Register of Historic Places Registration Form (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

other log, shake

Narrative Description (Describe the historic and current condition of the property on one or more continuation sheets.)

The Beaver Lake Dam was built on the outlet stream of Beaver Lake, 75 feet downstream from the lake outlet. Its purpose was to improve the navigability of the canoe route by raising the level of Beaver Lake about three feet, thereby deepening the channel between Alexander Lake and Beaver Lake. Now, without maintenance, the dam still holds some water and effectively raises the level of Beaver Lake by one to two feet.

The dam was simply constructed using a twelve inch diameter log about 45 feet long as the main structural member or stringer. This log was wedged cross-wise in the stream at a narrow bedrock constriction, where the stream would otherwise be less than one foot deep. Split planks about six feet long were nailed (using galvanized nails) to the top of the log at a 45 degree angle so that the tops of the split planks pointed downstream. Large rocks were placed in the water at the base of the split planks on the upstream side to hold the planks down against the force of the water. Rocks were also used to chink under the stringer and under the split planks, to further support the dam against water pressure.

While some of the chinking rocks have been displaced and the stringer has sagged, thereby lowering its effective height, the dam still raises the level of Beaver Lake. In some seasons the water level of Beaver Lake completely obscures the dam at its current effective height.

8. Statement of Significance

Applicable National Register Criteria (Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)

- X A Property is associated with events that have made a significant contribution to the broad patterns of our history.
B Property is associated with the lives of persons significant in our past.
X C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
D Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations (Mark "X" in all the boxes that apply.) N/A

- A owned by a religious institution or used for religious purposes.
B removed from its original location.
C a birthplace or a grave.
D a cemetery.
E a reconstructed building, object, or structure.
F a commemorative property.
G less than 50 years of age or achieved significance within the past 50 years.

8. Significance (continued)
=====

Narrative Statement of Significance (Explain the significance of the property on one or more continuation sheets.)

The Beaver Lake Dam was designed and built in 1936 as an integral part of the Admiralty Island Civilian Conservation Corps Canoe Route. The dam was intended to raise the level of Beaver Lake and make the channel between Beaver Lake and Alexander Lake more navigable. Although it has sagged over the years and has not been maintained, the dam still functions to increase the height of Beaver Lake.

10. Geographical Data

Acreege of Property less than 1 acre

UTM References (Place additional UTM references on a continuation sheet)

	Zone	Easting	Northing	Zone	Easting	Northing
1	08	546600	6392600	3	_____	_____
2	___	_____	_____	4	_____	_____

Verbal Boundary Description (Describe the boundaries of the property.)

The Beaver Lake Dam is a linear feature 45 feet long and 6 feet wide, but its natural context includes the creek vicinity within sight, about 100 feet downstream and 100 feet upstream, and 50 feet up either creek bank, all occurring in a small circumscribed area of less than one acre in the NW 1/4 of the NE 1/4 of Section 34, Township 48 South, Range 69 East, Copper River Meridian.

Boundary Justification (Explain why the boundaries were selected.)

The Beaver Lake dam boundary includes the dam itself and the natural environment within eyesight of a person standing near the dam.
