

Remove loose earth and slide rock 2' to 3' above edge of backslope which will obviously soon slide into trail.
Leave no stump to sprout at this angle.

Clear inside corner. Leave no rock roots, or earth in position designated by shaded triangle.

Clear tread of rocks and roots. Leave no small rocks or roots at position indicated by dotted line.

Heap earth in form of a dirt rail to height of 6" to 8". Place rocks on dirt rail or put big rocks in place of dirt rail.

24 to 30"
Primary Trails.
24" to 30" wide on slopes
from 85% (40°) and 165% (60°)

Secondary Trails.
Not to exceed dimension given
above. Less in most cases will suffice.
