HABITAT SUITABILITY INDEX MODELS

The HSI models are designed to be used in the Habitat Evaluation Procedure which is used by the Fish and Wildlife Service in impact assessment and habitat management activities. HSI models have been developed and published by the National Ecology Research Center (formerly the Western Energy and Land Use Team) and the National Wetlands Research Center (formerly the National Coastal Ecosystems Team). Those produced by NWRC (NCET) are listed here, but should be ordered from the Publications Unit or NTIS.
