We're joining the metric world. The National Park Service is introducing metric measurements in its publications to help Americans become acquainted with the metric system and to improve interpretation for park visitors from other nations.

Yellowstone National Park is a designated fee area under the Federal Land and Water Conservation Fund Act of 1965, as amended, which provides for the charging of entrance fees and recreation use fees.

Yellowstone National Park is administered by the National Park Service, U.S. Department of the Interior. A superintendent, whose address is Yellowstone National Park, WY 82190, is in immediate charge. As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the wisest use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interests of all our people. The Department also has a major responsibility for American Indian reservation communities and for people who live in Island Territories under U.S. administration.

National Park Service U.S. DEPARTMENT OF THE INTERIOR

## Great Fountain Geyser on the Firehole Lake Drive. YELLOWSTONSTONE

The National Park Service hopes that visitor activities in Yellowstone WHAT will result in apprecia-TO DO tion of America's wilderness heritage and in enjoyment of the area.

Some of the more popular activities are listed below. Fishing. In Yellowstone, grizzly, otter, osprey and other animals have first

The special grandeur of the Hayden Valley derives from its combina tion of spacious meadow lands and wilderness

rivers.

Some special hazards in Yellowstone: All park animals are wild and potentially dangerpullouts, out of the traffic lane.

in thermal areas. Leaving designated pathways is unlawful, unsafe, and destructive to the thermal features.

low, averaging 4.4°C (41°F). Survival time in these waters is no more than 30 minutes. Yellowstone's streams are cold, big, and fast. Be

advised in park streams or lakes. Don't take chances! Steep slopes in the canyon areas often contain loose rocks and soil. Climbing the slopes is both dangerous and unlawful. Stay on designated trails.

The Yellowstone region has most likely been oc-

signed to permit visitors to enjoy angling for wild for food. Fishing regulations vary widely throughters are closed to fishing;

> A free permit is required. The permit and a copy of the regulations can be obtained at any visitor center or ranger station.

Camping. Limited camping is available all year; however, the majority of campgrounds are open only from mid-June to mid-September. The major campgrounds have normally been filled to

capacity by noon during Boating. Yellowstone is the summer. Camping or a wilderness park. To overnight stopping is preserve its essential permitted only in designated campgrounds. When park camporounds are full, camping visitors, including persons with self-contained recreais also prohibited on tional vehicles, must find facilities outside the park. Your stay in the boats are allowed in park as a camper is limited to 14 days during the summer season and to 30 days at other times. Some campgrounds are restricted to hard-sided offices. vehicles; check at a visitor center or ranger station for current information. Two campgrounds

nearly 500 kilometers (300 miles) of public roads. Most major feaqualities, power boating has been prohibited extures are adjacent to cept on open areas of the Grand Loop Road: several one-way drives Yellowstone Lake, and on Lewis Lake, Boating lead off the loop to areas of special interest. most streams and rivers, Park roads are for leialthough hand-propelled surely driving only. The maximum speed limit is some areas. All boaters 72 kilometers per hour are required to have per-(45 mph) on the primary mits. Copies of boating roads; other road speeds regulations and permits are as posted. Motor are obtainable at ranger vehicles may be used on roads only and bicycles are restricted to roads and designated bicycle trails. Visitors may encounter snow and hazardous driving conditions during spring and fall,

closures.

Driving. Yellowstone has Horseback riding, stage coach rides, boat and bus tours. In summer horses may be hired for short trips from Canyon, Tower-Roosevelt, or Mammoth. Arrangements can be made for extended trips by contacting the Yellowstone Park Company or any of the outfitters and guides neighboring the park. Stagecoach rides are run regularly from Roosevelt Boat excursions leave Bridge Bay frequently each day during summer Bus tours of the park are conducted from park hotels and lodges. There is a charge for each of these concessioneroperated activities. with temporary road

Hiking. Trails-about quired for all back-1,600 kilometers (1,000 miles) of them-lead to remote parts of the park. Some offer easy partday trips over gentle terrain; others require skill and endurance because of their elevation, length, and ruggedness. Most are marked with directional signs giving destinations and distances. Good topographic maps which can be purchased at any visitor center, are highly recommended. Always check trail conditions with a ranger before setting out on an overnight or long hike.

A free back-country use and fire permit is re-

advance of the planned date of departure. In bear country, noisy hikers are safest because they are least likely to surprise bears. A loud, continuous talker may be vour best companion on the trail, if not in camp. It's a good idea to wear a bell or let a can of rattling pebbles dangle from your pack as you

walk. If you see a bear,

detour!

country camping. If you

plan to camp in the back

country you must reserve

a campsite. Back-country

campsites may be re-

served at any ranger

station and some visito

centers upon your arrival

in the park. Reservations

must be made in person

ous. Do not get close to any animal. Watch large FOR YOUR animals from your vehicle. Stop only in roadside SAFETY Boiling water may be close beneath the surface

Water temperatures in Yellowstone's lakes are

careful while fishing or wading. Swimming is not

These regulations deserve special attention, and are enforced by park rangers Permits are required for fishing, boating, and back-country travel.

Pets are restricted to roadsides and parking areas, and must be kept leashed. Picking wildflowers, littering, and removing or vandalizing park features are unlawful activities. Swimming and bathing in thermal features are

unlawful. Firearms must never be carried or displayed. Except in those locations otherwise designated,

all wheeled vehicles are restricted to roadways. Fires must never be left unattended. Violators will be bonded and taken before a resident U.S. Magistrate who is authorized to assess fines or imprison offenders. Check with a ranger if you are unsure about any activity.

> The following information is provided to assist you in planning your visit to Yellowstone:

The park ranger. The men and women in uniforms and broad-brimmed hats are park rangers. They are here to help you and to protect the park and its features. Their responsibilities include providing interpretive, police, and fire services. Contact any park ranger for information or assistance. Report all accidents, thefts, vandalism, lost-and-found items. etc., at the nearest visitor center or ranger station.

The interpretive program. Evening campfire programs, nature walks, and other activities are offered at most developed areas throughout the park during the main visitor season. The schedule of interpretive activities may be obtained from any visitor center or ranger station.

Information by radio. For information as you drive park roads, tune your car radio to 1606 whenever you see one of the many roadside radio signs. You will hear a short message pertinent to the area through which you are passing.

Schedule of openings. Between October 31 and May 1, park roads and entrances (except the North Entrance) are ordinarily closed by snow to auto traffic. Most park campgrounds do not open before June, except at Mammoth, where camping is available all year.

Transportation. Commercial airlines provide yearround service to Idaho Falls, Idaho; Bozeman, Mont.; Billings, Mont.; and Jackson, Wyo. Summer air service is available to West Yellowstone, Mont.

Railroad passenger service is available to Billings, Livingston, and Bozeman, Mont.

Major bus lines serve Bozeman, Livingston, West Yellowstone and Billings, Mont.; and Cody and Jack-son, Wyo. Yellowstone Park Company buses provide connecting service to Livingston, Gardiner, and West Yellowstone, Mont.; Jackson Lake Lodge, and internal bus service throughout the park.

Where to stay. Within Yellowstone are hotels, lodges, cabins, and the Fishing Bridge Trailer Village. These accommodations are open from mid-June to Labor Day. Limited accommodations are available off-season, with winter activities centering at Old Faithful. Reservations are advised, especially during July and August, and can be made by writing the Yellowstone Park Company, Yellowstone Nationa Park, WY 82190. Those visitors already in Yellowstone may make advance room reservations anywhere in the park at any hotel or lodge (see visitor services chart, above).

The Lower Falls of the

sands of visitors have entered the park by snow vehicle. Heated oversnow vehicles are operated by concessioners from West Yellowstone, Mammoth and South Entrance. Private snowmobiles may also use the unplowed roads, but no cross-country vehicle use is permitted. Ski and snowshoe touring are also on the increase. The Old Faithful Visitor Center is open during the winter from about mid-December to mid-March, providing information, evening programs, and winter walks. Meals and overnight room are available through the winter at Old Faithful. The only roads open for auto traffic are from Gardiner to Mammoth and from there to the Northeast Entrance and Cooke City. This drive offers an excellent opportunity to see wildlife. Special information on winter activities and services may be obtained by writing to the superintendent, Yellowstone National Park, and reservations for winter facilities may be made by writing to the Yellowstone Park Company. Reservations are advised, especially during the holidays.

cupied or regularly visited by man since the retreat of the last period of glaciation. Although the harsh INDIANS, winters probably precluded year-round occupancy for prehistoric man, artifacts indicate that the area MOUNTAIN MEN. was visited extensively as a hunting ground. High-quality obsidian from Obsidian Cliff also attracted AND EXPLORERS

prehistoric man, who used it in making knives, lance points, arrowheads and ceremonial artifacts. Material from Obsidian Cliff was traded as far east as the Mound Builders of Ohio.

Modern Indians are known to have hunted in and passed through the area. The Bannock Trail was a main Indian thoroughfare used to cross the park to the plains in search of buffalo from about 1838 to 1878. The Bannock, Blackfoot, Flathead, Nez Perce, Utes, Crows, Shoshone, Piegans, and Paiutes lived

in close proximity to the Yellowstone country and are known to have frequented the region. Only one group of Indians is known to have lived within the area of the park. This group of about 200 Shoshone Indians, known as the "Sheepeaters," was here from approximately 1800 to 1871.

During the three decades after the widely reported trip of mountain man John Colter through the Yel-lowstone country in the winter of 1807–08, fur trappers occasionally passed through this remote region. The Montana gold rush again attracted attention to Yellowstone and in 1863 a party of 43 prospectors explored the region.

Tales by these trappers and prospectors prompted further exploration. In 1870, a group of Montanans, including Henry D. Washburn, N. P. Langford, and Lt. Gustavus Doane, visited the park. During this trip the idea of establishing a national park in the Yellowstone was discussed. One year later, in the summer of 1871, a Federal survey under the leadership of Dr. F. V. Hayden explored the area. A great amount of publicity followed, and on March 1, 1872, Yellowstone became the world's first national park.

the mystery and the beauty of this hid tain plateau challenged the early explorers. Here in Yellowstone were features of such significance that men were inspired to evolve a new philosophy for the land; a new land-use ethic based on preserving a part of our natural scene for the future. For here was established the world's first national park.

Yellowstone is a wonderful and mysterious land

them to great and inspired thoughts. The sheer won-

which has intrigued the minds of men and moved

To many, Yellowstone is a fleeting glimpse of a geyser, a bear or a canyon through the window of a passing car. But certainly Yellowstone is more than this. It is more than a collection of scenic features and natural curiosities. Yellowstone is an idea, a philosophy, and a monu-

ment to farsighted conservationists who more than

a hundred years ago foresaw the need to preserve a

morning. Hear the frosty meadows crackle as dim shapes invade their stillness and the mountains ring with the age-old, wild notes of bull elk issuing their thrilling challenges. This is Yellowstone, a tremendous block of wild mountain country in which thousands of furred and feathered creatures are living, mating and dying in harmony with the natural rhythms that have ruled the land for millions of years. In this natural scene, man is but a visitor who is privileged to share glimpses into the intimacies of nature-if he only has the time and patience. Here, roads, campsites, and hotels are enclaves of civilization in a wilderness world in which nature remains sovereign.

Riverside Geyser, along the Firehole River in the Upper Geyser Basin, is one of the most predictable in the park, with 5¾ hours between eruptions

Fossilized trees, which were buried in upright positions by volcanic material, punctuate the landscape in the northern part of Yellowstone

aering vo sculptured by glacial running water into a fascinating landscape. SHAPED BY

Although thousands of years have passed since Yellowstone's violent birth, the thermal features in the park bear testimony that at a comparatively shallow depth beneath us the fiery heart of the volcanoes still beats. Literally thousands of hot springs dot the thermal basins; gigantic columns of boiling water are hurled hundreds of feet into the air causing the ground to shake; hissing steam vents punctuate the valley floors; and stumps of redwood forests buried by volcanic ash and petrified in an upright position stand out starkly on eroded mountainsides. More recently, glaciers have reworked the land's surface by smoothing canyons and leaving a myriad

Visitors to Yellowstone are privileged to see in this vast array of natural features the culmination of several million years of exacting natural processes.
