TO DO

The National Park Service hopes that visitor activities in Yellowstone will result in appreciation of America's wilderness heritage and in enjoyment of the area. Some of the more popular activities are listed

Fishing. In Yellowstone, grizzly, otter, osprey and other animals have first chance at catching fish for dinner. Fishing regulations have been de-

out the park. Some waters are closed to fishing; some are restricted to fly fishing, and others are catch-and-release only. Take-home limits

signed to permit visitors

to enjoy angling for wild

for food. Fishing regula-

tions vary widely through

rivers.

The special grandeur of the Hayden Valley de-rives from its combination of spacious meadow lands and wilderness

> Some special hazards in Yellowstone: All park animals are wild and potentially dangerous. Do not get close to any animal. Watch large FOR YOUR animals from your vehicle. Stop only in roadside pullouts, out of the traffic lane. SAFETY

Boiling water may be close beneath the surface in thermal areas. Leaving designated pathways is unlawful, unsafe, and destructive to the thermal features.

Water temperatures in Yellowstone's lakes are low, averaging 4.4°C (41°F). Survival time in these waters is no more than 30 minutes.

Yellowstone's streams are cold, big, and fast, Be careful while fishing or wading. Swimming is not advised in park streams or lakes. Don't take chances!

Steep slopes in the canyon areas often contain loose rocks and soil. Climbing the slopes is both dangerous and unlawful. Stay on designated trails. These regulations deserve special attention, and

nated campgrounds.

Permits are required for fishing, boating, and back-country travel. Pets are restricted to roadsides and parking areas, and must be kept leashed.

Picking wildflowers, littering, and removing or vandalizing park features are unlawful activities. Swimming and bathing in thermal features are unlawful.

Firearms must never be carried or displayed. Except in those locations otherwise designated, all wheeled vehicles are restricted to roadways. Fires must never be left unattended.

Violators will be bonded and taken before a resident U.S. Magistrate who is authorized to assess fines or imprison offenders. Check with a ranger if you are unsure about any activity.

INDIANS, MOUNTAIN MEN. AND **EXPLORERS** 

The Yellowstone region has most likely been occupied or regularly visited by man since the retreat of the last period of glaciation. Although the harsh winters probably precluded year-round occupancy for prehistoric man, artifacts indicate that the area was visited extensively as a hunting ground. High-quality obsidian from Obsidian Cliff also attracted prehistoric man, who used it in making knives, lance points, arrowheads and ceremonial artifacts. Material from Obsidian Cliff was traded as far east as the Mound Builders of Ohio.

Modern Indians are known to have hunted in and passed through the area. The Bannock Trail was a main Indian thoroughfare used to cross the park to the plains in search of buffalo from about 1838 to 1878. The Bannock, Blackfoot, Flathead, Nez Perce, Utes, Crows, Shoshone, Piegans, and Paiutes lived

in close proximity to the Yellowstone country and are known to have frequented the region. Only one group of Indians is known to have lived within the area of the park. This group of about 200 Shoshone Indians, known as the "Sheepeaters," was here from approximately 1800 to 1871.

During the three decades after the widely reported trip of mountain man John Colter through the Yellowstone country in the winter of 1807-08, fur trappers occasionally passed through this remote region. The Montana gold rush again attracted attention to Yellowstone and in 1863 a party of 43 prospectors explored the region.

Tales by these trappers and prospectors prompted further exploration. In 1870, a group of Montanans, including Henry D. Washburn, N. P. Langford, and Lt. Gustavus Doane, visited the park. During this trip the idea of establishing a national park in the Yellowstone was discussed. One year later, in the summer of 1871, a Federal survey under the leadership of Dr. F. V. Hayden explored the area. A great amount of publicity followed, and on March 1, 1872, Yellowstone became the world's first national park.

INFORMATION AND SERVICES

The following information is provided to assist you in planning your visit to Yellowstone: The park ranger. The men and women in uniforms and broad-brimmed hats are park rangers. They are here to help you and to protect the park and its features. Their responsibilities include providing interpretive, police, and fire services. Contact any park ranger for information or assistance. Report all accidents, thefts, vandalism, lost-and-found items,

Full service available mid-June to late August.

Limited service available during spring and fall

etc., at the nearest visitor center or ranger station. The interpretive program. Evening campfire programs, nature walks, and other activities are offered at most developed areas throughout the park during the main visitor season. The schedule of interpretive activities may be obtained from any visitor center

Information by radio. For information as you drive park roads, tune your car radio to 1606 whenever you see one of the many roadside radio signs. You will hear a short message pertinent to the area through which you are passing.

Schedule of openings. Between October 31 and May 1, park roads and entrances (except the North Entrance) are ordinarily closed by snow to auto traffic. Most park campgrounds do not open before June, except at Mammoth, where camping is available all year.

Transportation. Commercial airlines provide yearround service to Idaho Falls, Idaho; Bozeman, Mont.; Billings, Mont.; and Jackson, Wyo. Summer air service is available to West Yellowstone, Mont. Railroad passenger service is available to Billings,

Livingston, and Bozeman, Mont. Major bus lines serve Bozeman, Livingston, West Yellowstone and Billings, Mont.; and Cody and Jackson, Wyo. Yellowstone Park Company buses provide connecting service to Livingston, Gardiner, and West Yellowstone, Mont.; Jackson Lake Lodge, and internal bus service throughout the park.

Where to stay. Within Yellowstone are hotels, lodges, cabins, and the Fishing Bridge Trailer Village. These accommodations are open from mid-June to Labor Day. Limited accommodations are available off-season, with winter activities centering at Old Faithful. Reservations are advised, especially during July and August, and can be made by writing the Yellowstone Park Company, Yellowstone National Park, WY 82190. Those visitors already in Yellowstone may make advance room reservations anywhere in the park at any hotel or lodge (see visitor services chart, above).

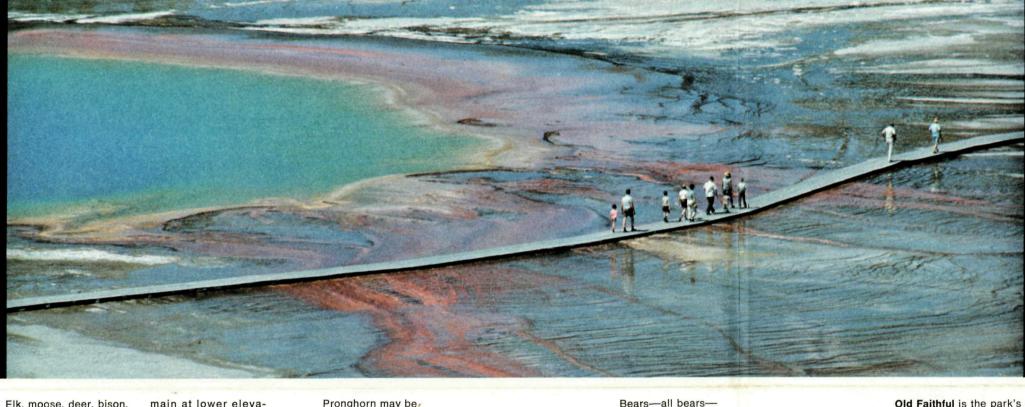

Adjacent facilities. Recreational opportunities equal to the best in the Rockies are found in the four national forests bordering Yellowstone. Neighboring communities offer complete accommodations and services, and to the south lies Grand Teton National Park, with many concessioner and Federal

Winter use. Deep snows and clouds of condensed vapor from thermal areas combine to give Yellowstone a unique winter beauty. In recent years, thou-

The Lower Falls of the

sands of visitors have entered the park by snow vehicle. Heated oversnow vehicles are operated by concessioners from West Yellowstone, Mammoth, and South Entrance. Private snowmobiles may also use the unplowed roads, but no cross-country vehicle use is permitted. Ski and snowshoe touring are also on the increase. The Old Faithful Visitor Center is open during the winter from about mid-December to mid-March, providing information, evening programs, and winter walks. Meals and overnig are available through the winter at Old Faithful. The only roads open for auto traffic are from Gardiner to Mammoth and from there to the Northeast Entrance and Cooke City. This drive offers an excellent opportunity to see wildlife. Special information on winter activities and services may be obtained by writing to the superintendent, Yellowstone National Park, and reservations for winter facilities may be made by writing to the Yellowstone Park Company. Reservations are advised, especially during the holidays.

Elk. moose, deer, bison, antelope, and coyote are abundant in Yellowstone. WHERE but they are not found TO FIND everywhere. Like people, they prefer to live in WILDLIFE special places at certain times. Throughout the park they wander freely.

> Your own chances of seeing wildlife will increase if you fit your schedule to theirs. Many a meadow is dotted with elk at dawn but empty when the sun beats down and insects force the animals into protective cover. At evening the elk again make their appearance.

Coyotes may hunt mice along the roadside when traffic is sparse, and waterfowl parade their young at dawn; but these and other shy creatures take cover as human activity increases. Moose may be seen most any time of the day, especially in the wetlands.

Bison generally leave the more visited sections of the park for higher elevations by early June. A few older animals re-

Yellowstone's park flower.

main at lower elevations throughout the year. Bear may be encountered at any time throughout the park. As a rule, the best seasons for wildlife observations are spring and autumn.

Some favorite summer viewing areas are as fol-

The Hayden Valley between Fishing Bridge and Canyon, and Pelican Creek east of Fishing Bridge are prime moose territory. The Hayden Valley is also an area to watch for bison and grizzly. Waterfowl and gulls frequent the Yellowstone River in this valley. The Lamar Valley in the northeast section of the park is good territory for seeing elk, bison, moose, pronghorn, coyote, bighorn, and grizzly, especially during the winter months. Look for bighorn sheep on the cliffs between Mammoth and Gardiner, Montana,

sighted in the sagebrush flats surrounding the North Entrance.

In the meadows and forests along the road from Mammoth to Madison. elk are frequently seen.

Autumn brings elk mate and feed against a background of vapor billowing into the bracing

A bull elk (wapiti) relaxes along a stream (left).

The Midway and Upper Gevser Basins are also good areas to find elk and occasionally see bison. Near the South Entrance, elk and moose frequent the forests and wetlands along the Lewis River, Old Faithful, Lake, Canvon, and the areas between the North Entrance and Tower are good areas to see mule deer.

DANGEROUS

Ospreys are often seen

in the Grand Canyon of

the Yellowstone.

Bears-all bearshead the list of dangerous animals in Yellowstone National Park. Despite their sleepy, ANIMALS friendly looks, bears claw and bite visitors each year and destroy thousands of dollars worth of equipment.

If you are caught in a "bear jam," stay in your car with the windows rolled up. When camping don't put food in your tent! Food can be detected by bears. even when it is tightly wrapped. Bears may come right in with you during the night. To discourage these uninvited guests, keep your food locked in the trunk of your car. Never feed wild animals, most people who have been bitten were feeding animalsin violation of park regu-

lations. Bison, moose, and elk, as well as some of the smaller animals, can be extremely dangerous, especially when closely approached. Again, keep your distance or remain n your car.

GEYSERS AND **HOT SPRINGS** 

favorite attraction. But sharing the Upper Geyser Basin are numerous other geysers, including Riverside, Grand, Castle and Beehive, Eruption times for the most predictable geysers are posted in the Old Faithful Visitor Center.

> Downstream along the Firehole River, where it parallels the park loop road, are the Midway and Lower Geyser Basins. Boardwalk trails and side roads lead to points of interest in those areas. The Fountain Paint Pots Trail in the Lower Basin presents more varied hot water phenomena in a concentrated area than any other trail in the

park. Norris Gevser Basin is Yellowstone's most active thermal area, Eruption times for the more predictable geysers are posted at the museum in summer. Besides the numerous gevsers, a variety of fumaroles (steam vents) and hot springs makes Norris an inter-

low encompasses the whole park, and may include distant mountain ranges on clear days. Visible are the deep gash of the Grand Canyon, frigid Yellowstone Lake, and the expansive lodgepole pine forests of this high plateau.

Yellowstone is a wonderful and mysterious land which has intrigued the minds of men and moved them to great and inspired thoughts. The sheer wonder, the mystery and the beauty of this high mountain plateau challenged the early explorers. Here in Yellowstone were features of such significance that men were inspired to evolve a new philosophy for the land; a new land-use ethic based on preserving a part of our natural scene for the future. For here

was established the world's first national park. To many, Yellowstone is a fleeting glimpse of a geyser, a bear or a canyon through the window of a passing car. But certainly Yellowstone is more than this. It is more than a collection of scenic features and natural curiosities.

Yellowstone is an idea, a philosophy, and a monument to farsighted conservationists who more than a hundred years ago foresaw the need to preserve a bit of primitive America; a symbol of America's reverence for the foundations of her greatness, the

great untouched North American wilderness. Walk out into the cool, crisp air of an early fall morning. Hear the frosty meadows crackle as dim shapes invade their stillness and the mountains ring with the age-old, wild notes of bull elk issuing their thrilling challenges. This is Yellowstone, a tremendous block of wild mountain country in which thousands of furred and feathered creatures are living, mating and dying in harmony with the natural rhythms

that have ruled the land for millions of years. In this natural scene, man is but a visitor who is privileged to share glimpses into the intimacies of nature—if he only has the time and patience. Here, roads, campsites, and hotels are enclaves of civilization in a wilderness world in which nature remains

Riverside Geyser, along Fossilized trees, which the Firehole River In the Upper Geyser Basin, is were buried in upright positions by volcanio material, punctuate the andscape in the northern one of the most predictable in the park, with 53/4 hours between part of Yellowstone.

A LAND SHAPED BY FIRE AND

WATER

In Yellowstone the two contrasting elements, fire and water, have combined to produce a land of natural wonders. It is a land born in the fires of thundering volcanoes and sculptured by glacial ice and

running water into a fascinating landscape. Although thousands of years have passed since Yellowstone's violent birth, the thermal features in the park bear testimony that at a comparatively shallow depth beneath us the fiery heart of the volcanoes still beats. Literally thousands of hot springs dot the thermal basins; gigantic columns of boiling water are hurled hundreds of feet into the air causing the ground to shake; hissing steam vents punctuate the valley floors; and stumps of redwood forests buried

by volcanic ash and petrified in an upright position stand out starkly on eroded mountainsides. More recently, glaciers have reworked the land's surface by smoothing canyons and leaving a myriad of sparkling blue ponds and lakes scattered across

the landscape. And now, mountain streams carve beautiful canyons and leap over resistant rock ledges

in breathtaking cascades and waterfalls.

Geologically, Yellowstone is a young land, with the last of the lava flows burning their way across the surface less than 100,000 years ago. Soil development is shallow and pioneer plants are common. Even today fire and water, in the form of thermal heat, snow, and rain dominate the landscape and determine which plants and animals will make up Yellowstone's natural communities.

Visitors to Yellowstone are privileged to see in this vast array of natural features the culmination of several million years of exacting natural processes.
